

SHELL OPENING SIZE TEMPLATE

1. Set your printer to print this document at 100%.
2. Carefully cut out the circle(s) leaving the dotted line intact, the circle's measurement includes the dotted line!
3. For measuring D-shaped openings, fold the circle in exactly half (the thin dashed line on each circle) and hold the flat edge between the measuring points on the shell.
4. Order shells from www.HermitHarbor.com. The one-tenth of an inch increments of this template match the sizes listed for all shells in the store.
