

maxmetal™

MAX-metal™ ELEMENT
Steel Composite Panels make a
great magnet receptive surface!

MAX-metal™ Element is a 3 mil Steel Composite Panel designed for indoor and outdoor applications where a magnet receptive surface is needed. This steel composite panel is made with Galvanized Steel faces, which means it inhibits rust when used outdoors. The faces are painted bright white with a digitally receptive paint for flatbed printing. Being able to saw cut and CNC route makes this panel optimal for fabrication in most sign shops.

MAX-metal™ ELEMENT

Product Features

- 3mm thickness
- Available in 48" x 96"
- 0.25 mm galvanized steel w/ LDPE core
- 2-sided, digitally printable galvanized steel
- 41.6 lbs./sheet weight
