

MY AUTOMATION AND AI BACKGROUND - Keith Devrey

My other life: I have decades-long experience in the automation/AI Universe ~ I have the chops.

I have amassed a store of knowledge, with a clear view of what AI is; and what the future may hold.

Artificial intelligence is moving from automation to autonomy. No longer a *Reactive*, it's an *Autonomous*; capable of independent decision-making and functional execution.

AI-driven robotic autonomy in the physical world, currently allows machines to perceive and manipulate their environment without human involvement.

AI's will conquer all disciplines. Soon, they will become superhuman at everything (ASI) ~ an AI singularity event.

Then, ultrahuman (AUI).

AI's will dissolve our curiosity by giving us easy answers; which will lead to a deeper problem - human *Purposelessness*.

AI is already free from the labs and embedded itself into our lives, becoming an *Agentic* companion to humans. As such, it will wield ever growing influence over our lives.

AI is a tool of power, and while we know the companies who wield it today, soon the *Who* will be AI itself.

AI has become a *Hyperobject*; the input of Man in its totality, lies pooled beneath its surface. We created AI in our graven image - perhaps we should have aimed a little higher.

AI's will develop goals of their own that put them in direct conflict with us — If it comes to conflict, an artificial superintelligence will crush us.

With AI, quantum computing, and automation/robotics, we will see new worlds built. I can see these worlds....
