

Coaching with Rekindle Education: Teacher-Centered Math Support

Our Why

We heard directly from educators:

- Teachers feel overwhelmed and under-supported
- Professional learning often lacks joy, rigor, autonomy, and authenticity
- Elementary teachers need to demonstrate deep knowledge across several content areas *without* consistent access to individualized, math-specific supports

We listened and created something new to infuse more joy and rigor into professional learning by **elevating expert math educators to serve as Coaches** who provide **tailored professional learning** to peers across New Jersey.

How it Works

We find our experts. We use a thorough application process to **select and recognize our expert K-8 educators** who become consultants with Rekindle. Coaches receive training and support from our team and set their own schedule. Some Coaches work exclusively on weekends and evenings while others provide support during the school day.

We pair each Coach with teachers. We look at curriculum expertise, grade-level experience, and relevant professional experience to match Coaches with teachers. We provide the infrastructure that enables Coaches and teachers to **confidentially connect and engage in 1:1 and small group professional learning**. Coaches also **facilitate school-based PLCs** to deepen math content knowledge and instructional practice.

Teachers lead the way and sign up for as many coaching hours throughout the year as they'd like. **Coaches collaborate to look at trends** and then create a schedule of optional, virtual PD offerings. We assess the impact of coaching throughout to ensure our teachers are receiving the meaningful support they need.

Our Partners

We partner with public schools across New Jersey who are looking to **strengthen their student math outcomes** and **provide a new kind of benefit to retain teachers**. Partners pay a low, annual fee that provides teachers access to unlimited 1:1 coaching for 12 months. In addition to 1:1 coaching access, we offer all partners **access to facilitated PLCs** and offer all teachers in partner schools **access to targeted math-specific small group learning sessions**. Administrators provide insight into topics they'd like us to prioritize with small group sessions and PLCs.
