

Bearing Failure of A, B, and D

The 2014 Truline Map is eliminated by Bearing Failure. The 1947 Kent deed specifies that the N 33 W bearing from the beach to the back border aligns with the summit of Mt. Pisgah. The Swift claim to Stake A is eliminated by the CA and BA bearings which impact 886 and 1240 feet distant from the summit. BD impacts at a point 546 feet from the summit.

The distance from C at two cedar trees to Mt Pisgah peak: 2.77 miles or 14,600'. The 1947 Kent deed states: N 33 W is an "extenuation of a line passing through the summit of Mt Pisgah." The surface elevation the lake is 1,171 feet The height of Mt. Pisgah is 2,785 feet.

Method:

$$Q = \frac{2 \pi r \Delta}{360^\circ}$$

Where:

Q = Lateral Distance from Peak

r = radius = 14,600 feet [beach to peak]

Δ = difference in degrees from CE
