## March 27, 2017 Sketch of Kent-Swift Properties by Horizons Eng.

This illustrates the failure of the BAR'R 'wedge' relative to CESR on the 1947/67 Swift maps. The distance from A to R' is 90.5' compared to 90' between E and S, but A is disqualified. The BA bearing misses the summit of Mt Pisgah by 886 feet compared to the Kent CE which is dead on. Also, the SwiftR'A bearing is S 50 W compared to the Kent deed bearing of S 53 W. ent Brook S 53° W (deed) Stake A is Bogus **Shane Clark of Truline** discovered A in 2012. claiming it to be the northeast most corner Land Re of the Kent property. A is disqualified for reasons given above. The 91-foot AR' length is thought to mimic the original ES on the 1947 &1967 Swift maps. A was probably set in the early 1970's as part of the subterfuge to lower the Kent back 534°25 W border from EF to DF'. Diagram 9 -- Wedge Failure 16. Collection of Beach Diagrams 2-1947 Map
