

## March 27, 2017 Sketch of Kent-Swift Properties by Horizons Eng.

This illustrates the failure of the BAR'R 'wedge' relative to CESR on the 1947/67 Swift maps. The distance from A to R' is 91 feet compared to 90' between E and S, but A is disqualified. The BA bearing misses the summit of Mt Pisgah by 886 feet compared to the Kent CE which is dead on. Also, the Swift R'A bearing is S 50 W compared to the Kent deed bearing of S 53 W.
