

Venowave

Circulation Booster

An innovative drug-free solutions to common medical problems including pain, vascular conditions, prevention of Deep Vein Thrombosis (DVT), and wound healing.

The **Venowave®** can be used alone or in conjunction with blood thinners and/or compression socks. The **Venowave®** is applied to the back of the calf and mimics the body's venous system preventing blood from remaining still and clotting. The **Venowave®** is unique because it is lightweight (335g, about half pound), discreet and allows users to remain completely mobile. There are no wires, tubes or sleeves.

Venowave® is a unique device that offers improved quality and mobility for people suffering with circulatory problems.

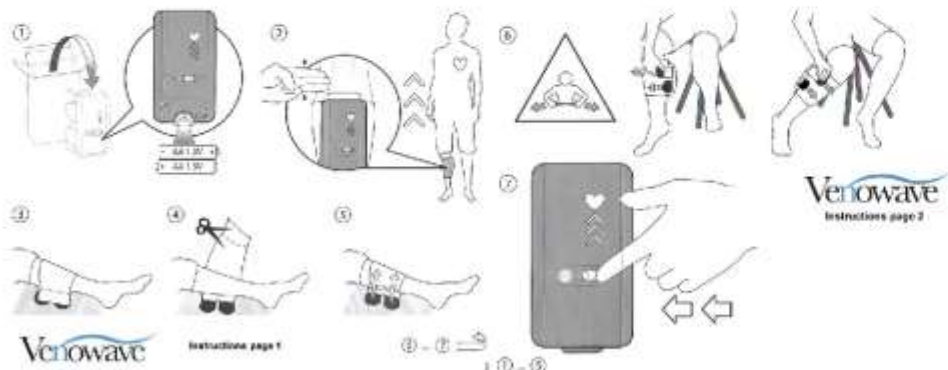

Venowave® is an innovative design—a portable battery-powered pump which worn on the back of the calf mimics muscle contraction and helps propel blood in the arteries and veins.

There are no known side effects, no wires, tubes or sleeves and the device can be worn all day long. **Venowave®** is the latest innovation of Saringer Life Sciences Inc. a device manufacturing and distribution company that provides innovative and cost-effective therapeutic solutions for pain, vascular conditions.

Comfortable to wear

Can be worn anywhere

Circulation Booster

Venowave® is a compact battery-operated pump that generates a wave-form motion. When worn firmly on the calf the device produces upward volumetric displacement which translates to increase in blood flow. Based upon patented wave generating technology, the **Venowave®** is an innovative alternative to compression stockings and sequential pneumatic compression devices. It has also been designed for those who simply suffer from poor circulation in the legs.

Weighing only 335 grams, and operating by means of two rechargeable NiMH AA batteries, the **Venowave®** enables an active lifestyle while delivering impressive clinical efficacy across a class of diseases that develop as a result of poor circulation.

The new **Venowave®** is the first product of its kind to offer people convenient, mobile, effective and discreet circulation support.

How the Circulation
Booster works

Venowave® Strap

The Benefits of **Venowave®** Circulation Booster

The **Venowave®** can be used alone or in conjunction with blood thinners and/or compression socks. The **Venowave®** is applied to the back of the calf and mimics the body's venous system preventing blood from remaining still and clotting. The **Venowave®** is unique because it is light-weight (335g, about half pound), discreet and allows users to remain completely mobile. There are no wires, tubes or sleeves.
