Compact 8

EVEN SPREAD

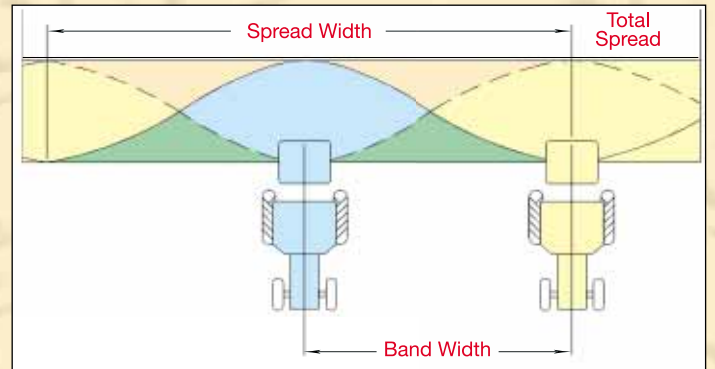

EASY TO SET UP

EASY TO CLEAN

Teagle Compact 8

Easy to Clean The hopper is easily removed, without the use of tools. This gives good access to the spreading mechanism for cleaning purposes..

The Hopper is manufactured from a flexible plastic material which contains an ultraviolet inhibitor – important in achieving long life. The steeply sloping sides help facilitate the spreading of difficult materials.

Setting is Simple

The spread pattern is centralised by releasing a wing nut and rotating the arc control plate.

The Teagle Spread Pattern has been developed such that when two adjacent bouts overlap, the graph of total spread is a straight line.

The Stainless Steel Shutter is manually operated using a push-pull over-centre system.

Drive to the Stainless Steel Rotor is through a totally enclosed bevel gearbox.

Your dealer is:

Specifications

Capacity	234 litres (234 kgs)
Loading Height	120 cm (3' 11")
Unladen Height	56 kg (124lb)
Linkage	Category 1

The company's policy is one of continuous improvement and development, therefore specifications are subject to change without notice.
