Re: Public Comment on Air Products Carbon Capture and Sequestration Project – Lake Maurepas

Permit No. MVN-2011-03218-EDM

Dear Regulatory Branch Staff,

I am writing as a [private citizen/resident/local stakeholder] to formally submit my opposition to the proposed Air Products Carbon Capture and Sequestration (CCS) project in and around Lake Maurepas, Louisiana. I respectfully request that these comments be included in the official administrative record for **Permit No. MVN-2011-03218-EDM**.

Lake Maurepas is an ecologically and geologically sensitive natural resource that provides essential habitat for fish and wildlife, supports recreational and economic activities, and serves as a natural buffer against flooding for surrounding communities. The introduction of industrial-scale CO₂ injection and storage beneath this area presents substantial environmental, geological, and public safety risks that must be fully and transparently Evaluated.

[Insert additional points, personal concerns, or references to specific environmental, geological, or community impacts here.]

Thank you for your time and consideration. Please ensure that this correspondence is formally entered into the administrative record for **Permit No. MVN-2011-03218-EDM**.

Respectfully,
