

# PUMPS IN THE UVWUA SYSTEM

## ARE YOU IN COMPLIANCE?

### SHAREHOLDERS

#### Are you pumping water and utilizing a headgate?

UVWUA lets users pick either one method or the other for using their shares - no mixing allowed, keeping things simple and fair for everyone

#### How big is your pump outlet?

All pumps must be sized or metered to measure up to your allotted shares, no exceptions.

### RENTED WATER

#### Have you registered your pump with UVWUA?

Rented water contracts need to be renewed every year to keep the service running smoothly without any interruptions.

#### Do you have an updated sticker on your pump?

Once your contract is approved, you'll get a new sticker to put on your pump showing you're all good and in compliance.

#### Are you pumping the allotted amount of water?

Rented water users can pump up to 0.02 cfs—no exceptions! Keep it steady and within limits.

#### How big is your pump outlet?

Make sure the pump outlet stays at or below 3/4" to keep everything running smoothly

#### Is your pump off when UVWUA is in percentages?

If the system hits 80% or less, make sure to pull your pump since it's rented water—don't let it run dry!

If your contract is violated, you will be notified by mail and have 2 weeks to fix it. Questions? Call UVWUA at 970-249-3813 or Pump Admin at 970-901-0574.
