

The 4S' of Cyber Shield

1. SPOT! (The Magnifying Glass):

The first thing a good digital detective does is spot something strange! If a website looks weird, if a message has lots of mistakes, or if someone asks for information they shouldn't, your magnifying glass tells you: 'Something is not right!'. It's all about noticing those little clues.

2. SHARE! (The Talking People)

If you spot something fishy, what's the next super-important step? You share! Not your secrets, but your worries! Tell a grown-up you trust right away—a parent, a teacher, anyone who can help you. They're your sidekicks in the fight against online tricks.

3. SHIELD! (The Lion Badge)

Your shield is all about protecting your personal information. Your passwords, your birthday, your address. Never give them out to strangers online, and always make sure your online accounts have strong passwords, which your grown-ups can help you set up.

4. STOP! (The Hand Symbol)

And finally, if something feels wrong, if you're uncomfortable, or if that bait just won't go away, you have the power to stop! Stop clicking, stop talking, stop engaging. Close the tab, put down the device.
