

Apprentice trained, degree qualified, chartered engineers that have worked both sides of the fence – Operator and Supplier.

Engineering, Procurement, and Construction (EPC) firms face increasing pressure to deliver complex projects on time, on budget, and with uncompromising safety and reliability. Choosing STOLZ as your specialist partner gives you the edge.

Deep Specialist Expertise

Unlike generalist in-house teams, STOLZ provides dedicated domain knowledge in Measurement, Control and Functional Safety. Our experts bring years of proven experience solving the toughest engineering challenges (e.g. Phillips 66, Apache North Sea, BP)

Faster, Smarter Execution

We deliver ready-to-deploy procedural frameworks, software tools, and models that cut ramp-up time and accelerate delivery. This means your projects move faster, with fewer delays and less rework.

Cost-Effective Flexibility

Maintaining an internal niche team is expensive. With STOLZ, you get scalable expertise on demand (ad-hoc 1 day, 1 month, 1 year etc). The right people, only when you need them, without long-term overhead.

Reduced Risk & Greater Confidence

Our track record of successful projects ensures lower technical and delivery risk. Independent validation from STOLZ also gives your clients confidence in your work and enhances your competitive positioning.

Tools & Innovation You Can't Build Overnight

From advanced reliability models to specialised software, STOLZ brings cutting-edge technology and methods that EPCs can't replicate in-house without years of investment.

Focus on Your Strengths

Let your teams do what they do best (integration, client interface, and completions management) while STOLZ takes care of the complex, high-value specialist work.

Cross-Industry Best Practices

As STOLZ serves multiple sectors, we bring benchmarking insights and best practices that elevate your projects to the highest global standards. We spend the time understanding current regulation and standards for clients.

The Bottom Line

Partnering with STOLZ means:

✓ Faster project execution ✓ Lower total cost ✓ Reduced delivery risk ✓ Higher client confidence

STOLZ: Your specialist partner for safer, smarter, more reliable projects.
