Every 3.6 Seconds Someone Dies Of Starvation. 75% Are Children. New Technologies And This Action Plan Will Solve World Hunger.

NOTE: Preview and download this Action Plan at MarketingConsultantsGroup.com.

Here's the **Action Plan**. Teach the new technologies, solve the world's hunger problem.

1. Provide **Aquaponic/Hydroponic Teaching Systems**. Place in schools. Students will learn to breed fish, grow plants and pass on the **Aquaponic/Hydroponic** technologies.
2. Provide teachers, schools, libraries with **Aquaponic/Hydroponic** teaching materials to start and maintain school, home-based, community, and commercial feeding systems.
3. Utilize financial loan and business training programs available worldwide via non-profit organizations such as Kiva.Org to finance **Aquaponic/Hydroponic Teaching Systems**.
4. Track progress of teaching programs and share results, successes on social media.

This Back To The Roots "Water Garden" is perfect in a classroom, library, home to teach students about Aquaponics and Hydroponics, technologies for raising fish and growing plants.

It's available via HomeDepot.com for \$50.00.

INCLUDES EVERYTHING YOU NEED TO GET STARTED:

Organic Microgreen Seeds
Fast-growing and nutritious, these greens are perfect starter crops to get your aquaponics system up and running!

D-Klor and Zym-Bac
D-Klor removes chlorine from the water and enhances your fish's natural protective slime coating, while Zym-Bac kickstarts nutrient cycling to maintain healthy ammonia and nitrite levels for your fish.

Growstones
The perfect growing medium for your plants to take root and access the nutrient-rich water flowing through your ecosystem.

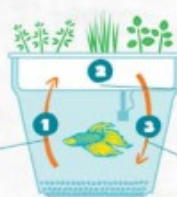

Fish Food and Coupon
This food contains the necessary proteins, vitamins, and dietary supplements for your fish. Plus, a coupon for \$3 off a beta fish at your local Petco!

THE SELF-CLEANING CYCLE AQUAPONIC ECOSYSTEM

The Water Garden is not your average fish bowl. While regular tanks require weekly water changes to keep your fish happy and healthy, the Water Garden uses an aquaponic self-cleaning cycle, so you don't need to clean the tank as often!

Your fish produces nutrient-rich waste. In regular aquariums, that waste builds up and becomes harmful to your fish.

In the Water Garden, the plants clean the water by continually taking up nutrients from the waste as their food to grow.

The clean, filtered water drops back down to your fish!

EXPERIENCE THE MAGIC OF AQUAPONICS

For thousands of years, farmers all over the world have used aquaponic growing systems (raising fish & plants together) as a sustainable & efficient way to grow food. Aquaponics can use 90% less water than traditional farming!

Now, you can bring the magic of aquaponics inside with the Water Garden — this easy & fun closed-loop ecosystem is perfect for any home or classroom! Just feed your beta fish, and watch the plants on top start to grow within days — all without any soil!

About This Product

The Water Garden is an award-winning, self-cleaning fish tank that grows organic herbs & microgreens on top. In this closed-loop, mini aquaponic ecosystem, the fish waste fertilizes the plants and the plants clean the water. It's the perfect gift, comes with everything you need, and is 100% Guaranteed to Grow.

Highlights

- Self-cleaning fish tank that grows organic herbs and microgreens on top, fish waste fertilizes the plants and the plants clean the water; use your greens in smoothies or salads
- Everything included: just pick out your fish and harvest your greens in 10 days
- Great gardening gift, teacher gift, or unique gift
- 100% guaranteed to grow: if your kit doesn't grow as described, we'll replace it or provide a refund
- Grows year round: the organic mushroom growing kit grows year round in any season
- Join us on our mission to help everyone experience the magic of growing their own food
