

# Business Advisory Services

**For any business, implementation of sustainable performance improvements requires insight into how to more effectively align finance functions, including financial resources, people, processes and systems, to strategic objectives, financial reporting needs, and operational requirements.**

Business Advisory Services fill this need by providing clients expert advice and support on a wide range of business transactions and events, including start-up capital needs, asset management, budgeting, cash flows, tax planning, internal accounting processes, accounting and reporting procedures, adherence to accounting standards, and more.

Examination and evaluation of financial records, processes and procedures under an accounting, regulatory and tax compliance lens, further enables our advisory services consultants to provide clients with a greater understanding of their finance and accounting operations and courses of action that may help them to achieve more timely and accurate financial reporting, safeguard their accounting processes, and to optimize business performance.

Our firm's business advisory services may be combined with our Outsource CFO, Assurance and Tax practices to provide clients an integrated portfolio of services through which to improve decision-making and to more efficiently manage the following business needs:

- Evaluation of internal processes and controls
- Risk identification and assessments
- Assessment of current risk responses
- Risk transfer strategies
- Cash flow analysis
- Bank financing reviews and reports
- Business entity formation
- Business valuation
- Strategic business planning
- Succession planning
- Company redemption and liquidation
- Company reorganization
