

Zonal Statistics offers tools for digitizing plot boundaries for all types of trials. Whether you use our Automatic Plot extraction or advanced editing tools, plots of any shapes and layouts can be re-created in a matter of minutes.

Extract Plot Boundaries

- Automatic plot boundary detection
- Flexible tools for plot generation and labeling
- Advanced plot editing tools
- Import existing plots from SHP and KML files

Generate a comprehensive list of statistics for every plot for a variety of vegetation indices, raw band value, plant counts, and elevation data - all in a single click.

- Comprehensive plot-level statistics
- Metrics for vegetation indices and raw band values
- Statistics for plant counts and plant height

Export all plot boundaries and statistics to SHP and Excel files for further analysis in other software, or share with others with publicly accessible web links.

- Export to Excel and SHP formats
- Share with public web links

[illegible]
