

The Magic Fog for the Perfect Storm

My Personal Story!

(Why should everyone fog their businesses, homes, schools, nursing homes, rehab units?)

My father is known as “The Nut Man” and has been making and selling nuts for over 20 years. In fact, he has hand made over 18 flavors of pecans, cashews and almonds. He is a *celebrity* in our hometown in Southwest Missouri and was fearless when it came to getting to the markets or festivals where he could peddle his craft. Patrons actually looked for him and his proudly worn veteran hat and his friendly words “would you like a sample” to all the passing crowds of people.

In early October, my dad decided to attend a very well-known festival near Branson Missouri. There were large crowds, in attendance, and very few were wearing masks, including my father. My step-mom, his side-kick peddler, was wearing a mask. Four days later, my step-mom was unresponsive. My dad, in sheer terror, called and asked me to come over to check on her and to see if I could get her up. With no luck, she was transported to our local hospital where she was tested positive to COVID-19. She had no fever, no low oxygen and was in Stage IV Renal Failure. If you know anything about your kidneys, these two workhorses will decide whether you can have medications to combat COVID19 or not. She now has a full viral load and encephalopathy with a diagnosis of lack of will to live. Two days later, she was released from the hospital and returned home with my diabetic father, who actually drove her home, from the first hospital that admitted her. My dad who has difficulty standing or walking with wasting muscles in his legs due to his diabetes is now tasked with caring for a declining 83 year old wife with COVID19 who was released too early from the hospital probably because of the rising number of admissions and less severe COVID19 symptoms.

None of our local family could assist me with my, now, COVID19 positive father, living at home, except for one super hero sister, who came from Texas, as we banded, together, to fight through the storm for two elderly COVID positive parents; one in the hospital, my stepmother, and, my father at home, hoping he would continue to hold negative. Two days later, he tested positive. If my father symptoms worsened, he would have to be admitted to a different hospital and the saga continues. What next? How are we going to manage two different hospitals and parents suffering on their own through the storm of COVID that usually takes away your ability to think, cope and live on your own?

The Situation: How can I keep myself and my sister COVID negative and symptom free in a COVID infested environment with the high likelihood we’d both contract it, give it to our families, at home, and the “what next” fear of everyday living was all consuming?

The Actions: We immediately turned to using a cool humidifier to continuously release Contagion Control Solution’s liquid HOCL solution into the air! We would purposely breathe in the humid HOCL into our lungs each time we passed the humidifier. I, then, ordered a fogger to fog 200ppm of cold HOCL throughout the house on multiple days. Surfaces were pre-cleaned, if they were dirty and then it was off to the races! I would spray every room in the house, including the bathrooms, kitchen, bedrooms, office, computers, and phones. Everything!

The Outcome: My sister and I tested COVID19 negative. My sister stayed, in the house, with active COVID19 patients while she, herself, being a high risk, due to cigarette smoking. She worked, diligently, to care for my COVID19 positive father, as worry and fatigue set in, over these last two weeks.

The Solution: Fogging CCS's HOCL along with cold humidifying in between each fogging kept everyone who came in contact with my parents and surfaces in their homes, COVID negative, with zero symptoms, and no need for other medical care for my diabetic 84 year old father, my 64 year old sister, or myself. We are bringing my step mom home from the hospital to a COVID negative home and will continue to fog until the quarantine time is over for my father and well into the future.

On two different occasions, my step mom was admitted to two different hospitals. I honestly believe that by fogging and cold humidifying with Contagion Control Solutions' HOCL, while she was hospitalized, that the process prevented the perfect storm and protected all of us from COVID. There are no toxic fumes, no side effects and it is easy to use and apply to any surfaces either through spraying, humidifying or fogging. Believe me, no PPE is necessary or required, when fogging. I used gloves and N95 masks to protect myself from airborne COVID19 virons. Bottom line -- my sister and I, after caring for two positive COVID19 parents, one living full time in their home, the other parent admitted to the hospital, we are both **COVID negative!**

COVID19 causes encephalopathy, kidney challenges, lung decompensation, viral endocarditis, and GI issues. The real long term outcomes from COVID19 are yet to be revealed. While we know little about this viron virus and its future impact, *YOU MUST FOG* Contagion Control Hypochlorous Acid (HOCL)!

EPA N listed pesticide approved product for SARS COV2. Make no mistake - the EPA N list is NOT intended to be used around or on humans. The toxic components of these products are initiating civil lawsuits, today, due to the human effect of chronic use of toxic products. The virus is not going away and we are poised for wave two. Are you using the right product for fighting the virus?

If you are a concerned business owner, consumer, and/or family member, then you must get informed! There are over 500 products on the EPA N list that are hazardous when used around humans and require PPE from the actual toxic chemical needed to destroy the virus.

WHY DO YOU PUT YOURSELF, FAMILY AND STAFF AT RISK?

READ THE LABEL!

**Take a look at the ingredients. Google the MSDS sheet. Read it for yourself.
You Would NOT use it! So why are YOU using it?**

I took two flights between June and August of 2020. I am sharing my story about my personal experience. My lungs were constricted to the point of needing to seek medical care upon return from my trips. I had to use a bronchodilator and an antibiotic for my infected lungs. I was fine before I got on my plane, in my hotel and in other areas in the US. I coughed, sneezed and my eyes watered from the hydrogen peroxide, bleaching agents, quant ammonias, and other so called "all natural products". The staff using the products had no idea what they were using and how to protect themselves. When I asked them what are you using – they had no clue!

NO ONE KNOWS!

DO THE RESEARCH!

I will only use Contagion Control Solutions' HOCL and for good reason. It's stable HOCL, manufactured by quality proven and vetted scientists and risk free from any side effects, when used on or around humans.
