ENVIRONMENTAL

ABOUT OUR COMPANY

VISION

We strive to be a worldwide leader in providing quality services and Innovative solutions that improve people and business.

MISSION

We provide training and services which are meant to - instantly - add value to corporate performance through a learning experience that enriches personnel capabilities.

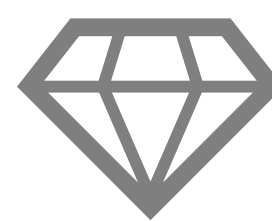

We develop innovative solutions that ensures seamless operations, elevates performance and increases efficiency.

GOALS

Our prime objective is to provide a work-based training, assessment and consultation service which consistency meets or exceeds customer expectations.

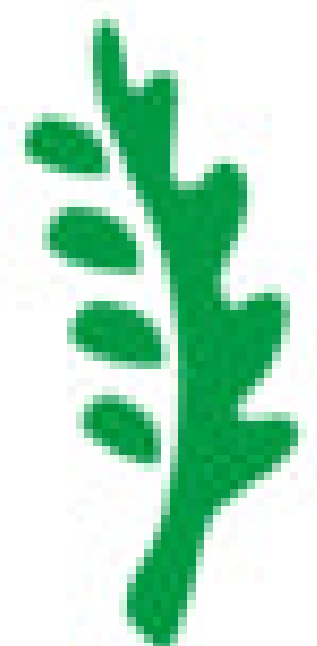

VALUES

Customers are the center of our activities. We serve with Commitment, Integrity and Dedication.

Innovation is the reason of our existence and will always be at the heart of our business.

Employees of all levels are partners of success , owners of achievements and enriching their competencies will always be on the top of our priorities.

ARABIAN CEMENT
العربية للأسمنت

Abo-Zaabal for Fertilizers and Chemicals

It is one of our customer. Our experts
make full environmental measurements
survey in this plant located at abo-zaabal
city

Nubian Mining Company

It is one of our customer. Our experts
make full environmental measurements
survey in this gold mine located at Marsa
Alam city

Arabian Cement

Arabian Cement is one of our customer as
one of our training courses take place in
Arabian cement plant in waste
management field

Electro El Hany for Electrical engineering

It is one of our customer. Our experts make full environmental impact study till gain the governmental acceptance for its project located at El-Menia governorate.

Kandil Glass Manufacturing

It is one of our customer. Our experts make full environmental measurements survey in this plant located 10th of Ramadan city. Also, we make environmental register and hazardous material and wastes register.

الالكترو الهاني
Electro ElHany

National Company for Maize Products

It is one of our customer. Our experts make two full environmental impact studies till gain the governmental acceptance for its project located at Tenth of Ramadan city.

Union Batteries Manufacturing

It is one of our customer. Our experts make full environmental measurements survey and air dispersion model study in this plant located 6th of October city.

United Batteries Manufacturing

It is one of our customer. Our experts make full environmental measurements survey and environmental compliance plan in this plant located 10th of Ramadan city.

UNION
BATTERIES

Centamin – Sukari Gold Mining

Sukari Gold Mining is one of our customer as one of our training courses and asbestos analysis take place in its plant located at Marsa Alam city.

EDC

Egyptian Drilling Company (EDC) is one of our clients, where we established business with them since 2020

Petrosilah

Petrosilah Petroleum company, one of the Egyptian Petroleum sector company which work in the western desert in Egypt. This company is one of our agent as EECC in environmental measurements varying from Training, Inspection, etc.

ROYAL CERAMICA

It is one of our customer. Our experts make full environmental measurements survey in this plant located at Obour city

Our Services

We provide a variety of Business Lines and Support Services

Training & Consultation

Provide Training in different categories, e.g.: Occupational Health & Safety, Engineering Disciplines, etc.

Inspection

Conduct several types of inspections and surveys, e.g.:
Fire Extinguishers inspection, Thermographic Inspection
Vibration Analysis, etc.

EIA Studies

Prepare all types of environmental impact assessment studies to any project

Material Development

Develop a broad range of Technical Material, in different formats, e.g.: Online/E-Learning

Carbon footprint studies

Prepare carbon footprint studies according to ISO 14064 and its three scopes, also according UN GHG protocol to all companies,

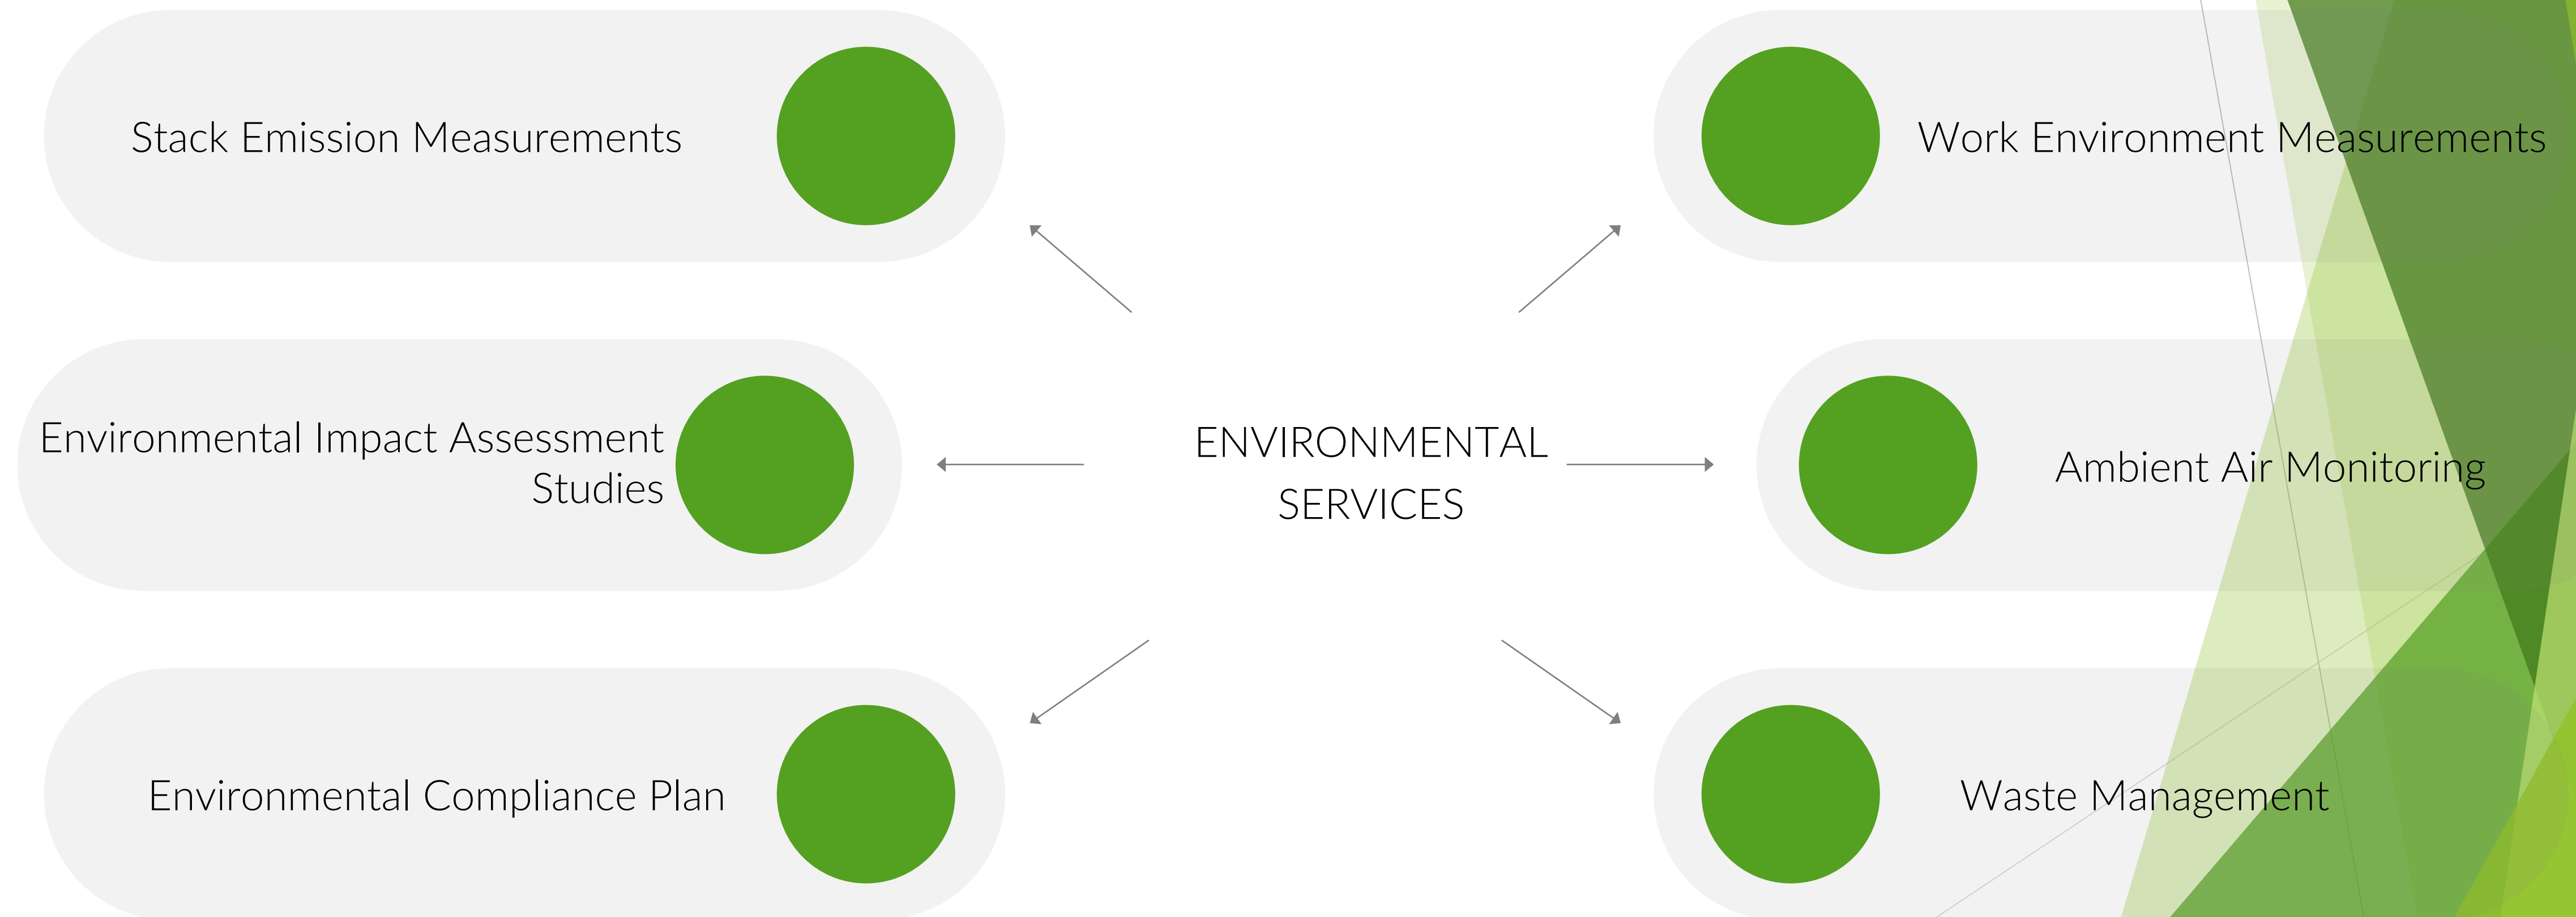

Environmental Consultancy

Air Pollution Monitoring, Plants' Stacks and chimneys Emissions, Work Environment Measurements, Noise Level Survey, Illumination Survey & Waste Management Study,

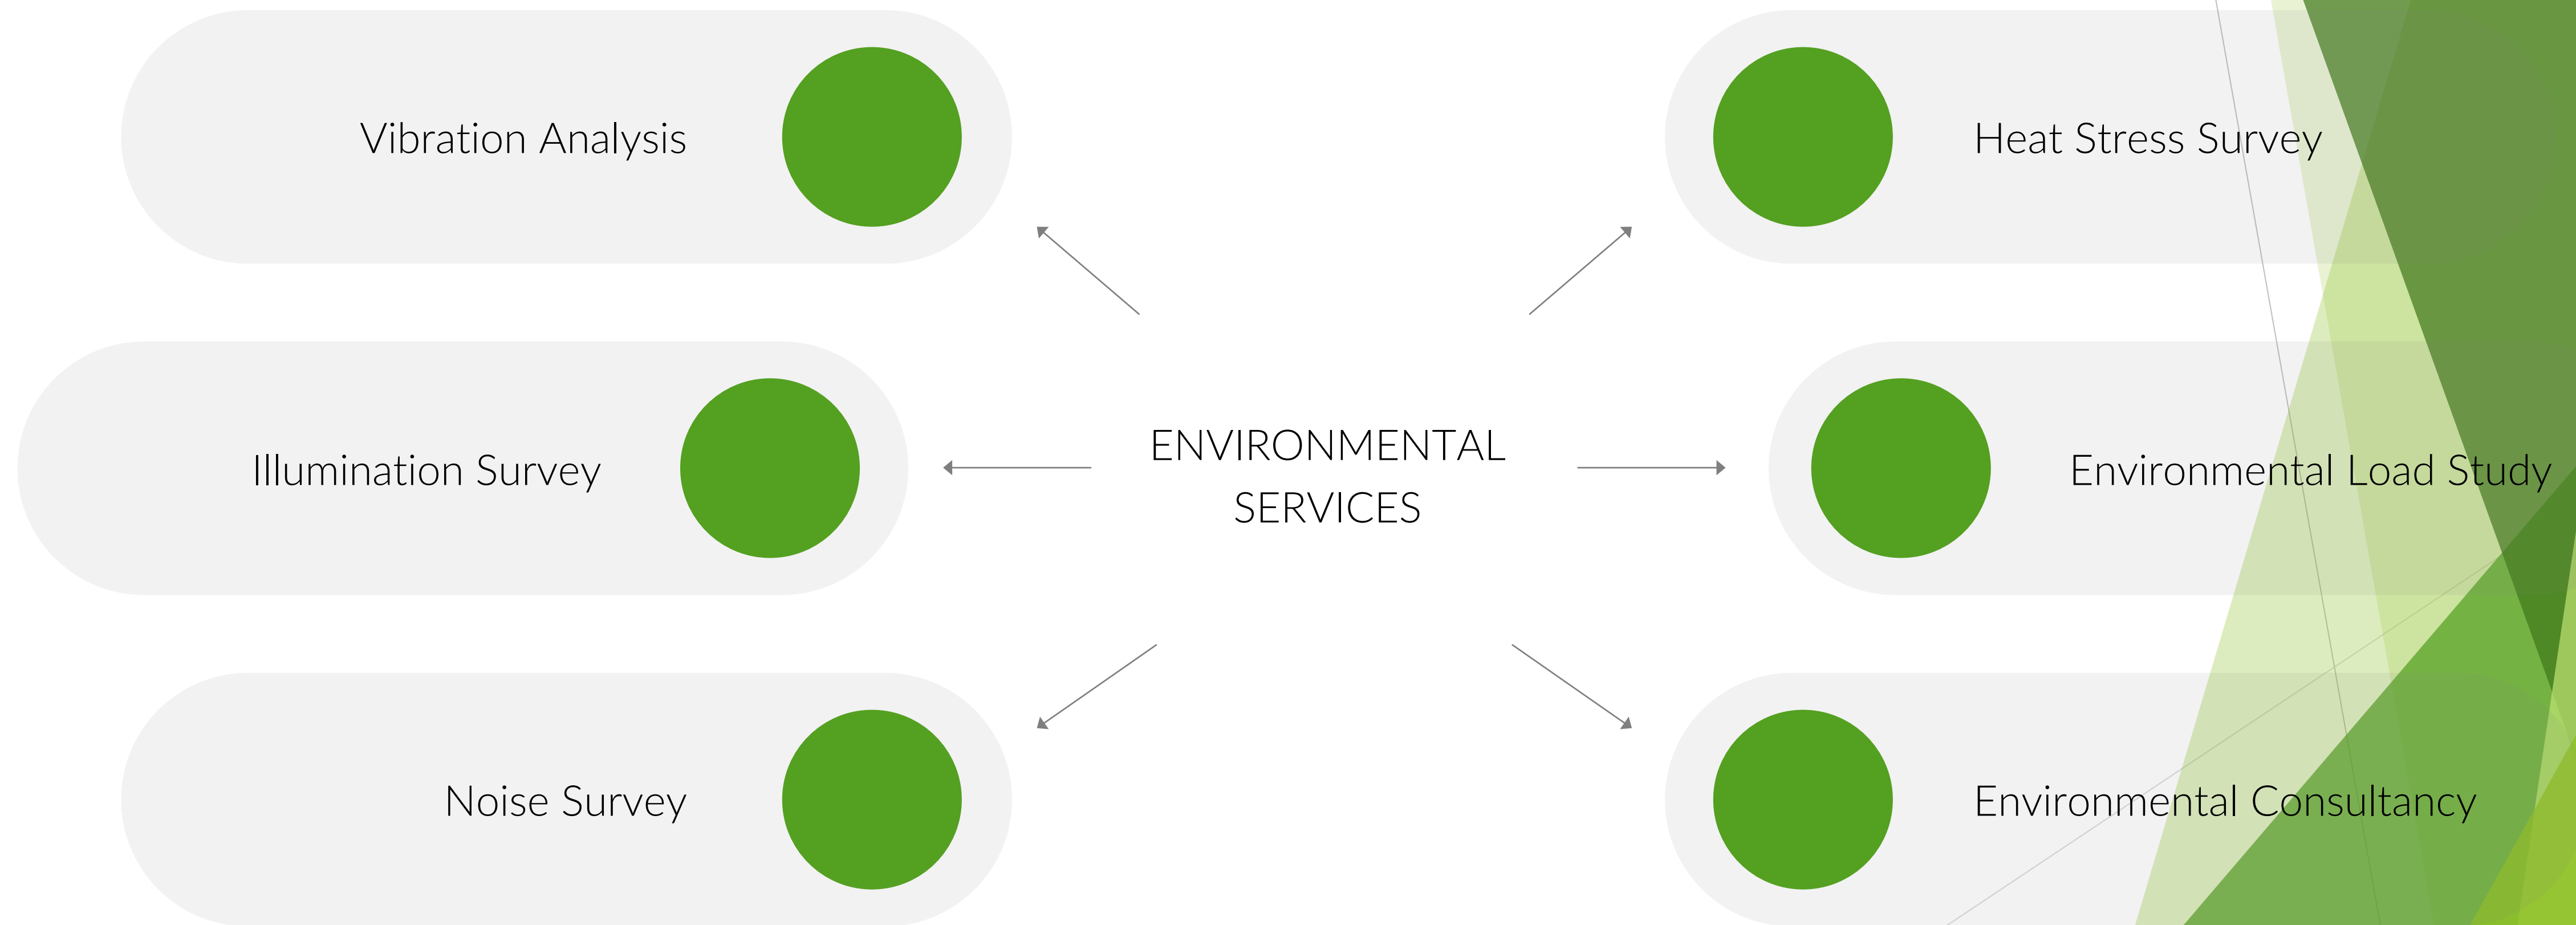

How can we help?

The different types of Inspection Services we can conduct

How can we help?

The different types of Inspection Services we can conduct

EIA Studies

Environmental impact assessment studies are considered one of the most important conditions required to obtain the approval of government institutions around the world to establish projects. The environmental impact assessment studies of the projects include a full description of the project and an anticipation of the project's effects on the various environmental circles, as well as a proposal for measures to protect the environment from the negative effects of the project and measures to mitigate them as an alternative to preventing them completely. The Egyptian law divides projects according to the strength of their expected impact on the environment into four levels: A - B - B Scoped - C

We Prepare all EIA Studies in Arab Region, submit them to the concerned authorities and follow-up it till approved

Stack Emission Measurements

Comply with both National and International Legislations

The need to demonstrate environmental responsibility is key for today's industries.

Production lines stacks' emissions are also subject of international, regional and national controls.

Air emission testing is essential for company's air quality management process. Stack exhaust sampling is used to help determine significant sources of air pollutants, establish emission trends over time, target regulatory actions, and estimate air quality.

Air emission testing targets Total Suspended Particulate, Sulphur Dioxide, Carbon Monoxide, Carbon Dioxide, Nitrogen Oxides and any other pollutants listed in the law and compare it with emission standards.

Engine Emissions Testing

Comply with both National and International Legislations

The need to demonstrate environmental responsibility is key for today's oil & gas industry.

Fuels and exhaust gas emissions are also subject of international, regional and national controls.

Air emission testing is essential for company's air quality management process. Engines exhaust sampling is used to help determine significant sources of air pollutants, establish emission trends over time, target regulatory actions, and estimate air quality.

Air emission testing targets Hydrogen Sulphide, Sulphur Dioxide, Carbon Monoxide, Carbon Dioxide, Nitric Oxide and Nitrogen Dioxide and compare it with emission standards.

Work Environment Measurements

Work Environment or working environment is any environment is a closed area with a specific area in which any type of business is carried out, whether industrial, tourism or residential, where several individuals gather inside this place to carry out a specific activity that results in some of the air pollutants that directly affect the workers.

The Main air pollutants that we measure in the work environment are:

- Dust as Total Suspended Particulate.
- Dust as Respiratory Particulate (PM₁₀ – PM_{2.5})
- Carbon monoxide (CO).
- Nitrogen Dioxide (NO₂).
- Sulfur Dioxide (SO₂).
- Volatile Organic Compounds (Benzene – Toluene – Xylene – Ethylbenzeneetc.)

Any other pollutant mentioned in national or international regulations

Ambient Air Monitoring

Ambient air environment is any environment located in open area (as street, desert, or any unbuilt area) with no activities, but some human activities will take place in this area in the future.

Ambient Air monitoring done to make an overview of the air quality in the mentioned area before any activity affect on the air quality as we say: Baseline Measurements.

The Main air pollutants that we measure in the ambient air for 24 hours directly are:

- Dust as Total Suspended Particulate.
- Dust as Respiratory Particulate (PM10 – PM2.5)
- Carbon monoxide (CO).
- Nitrogen Dioxide (NO₂).
- Sulfur Dioxide (SO₂).

Any other pollutant mentioned in national or international regulations

Environmental Compliance Plan

- The company prepares environmental compliance plans for facilities that suffer from environmental problems and develops appropriate solutions for them and follows up the plan with the concerned authorities until the environmental conditions of the company are reconciled through:
 - Preparing environmental Registers
 - Preparing hazardous materials Registers
 - Preparing hazardous waste Register
 - Making plans to address gas emissions
 - Industrial sewage treatment plant design
 - Design of warehouses for hazardous and non-hazardous materials and waste

A Number of Environmental Consultants work with SES with cooperation protocol

Vibration Analysis

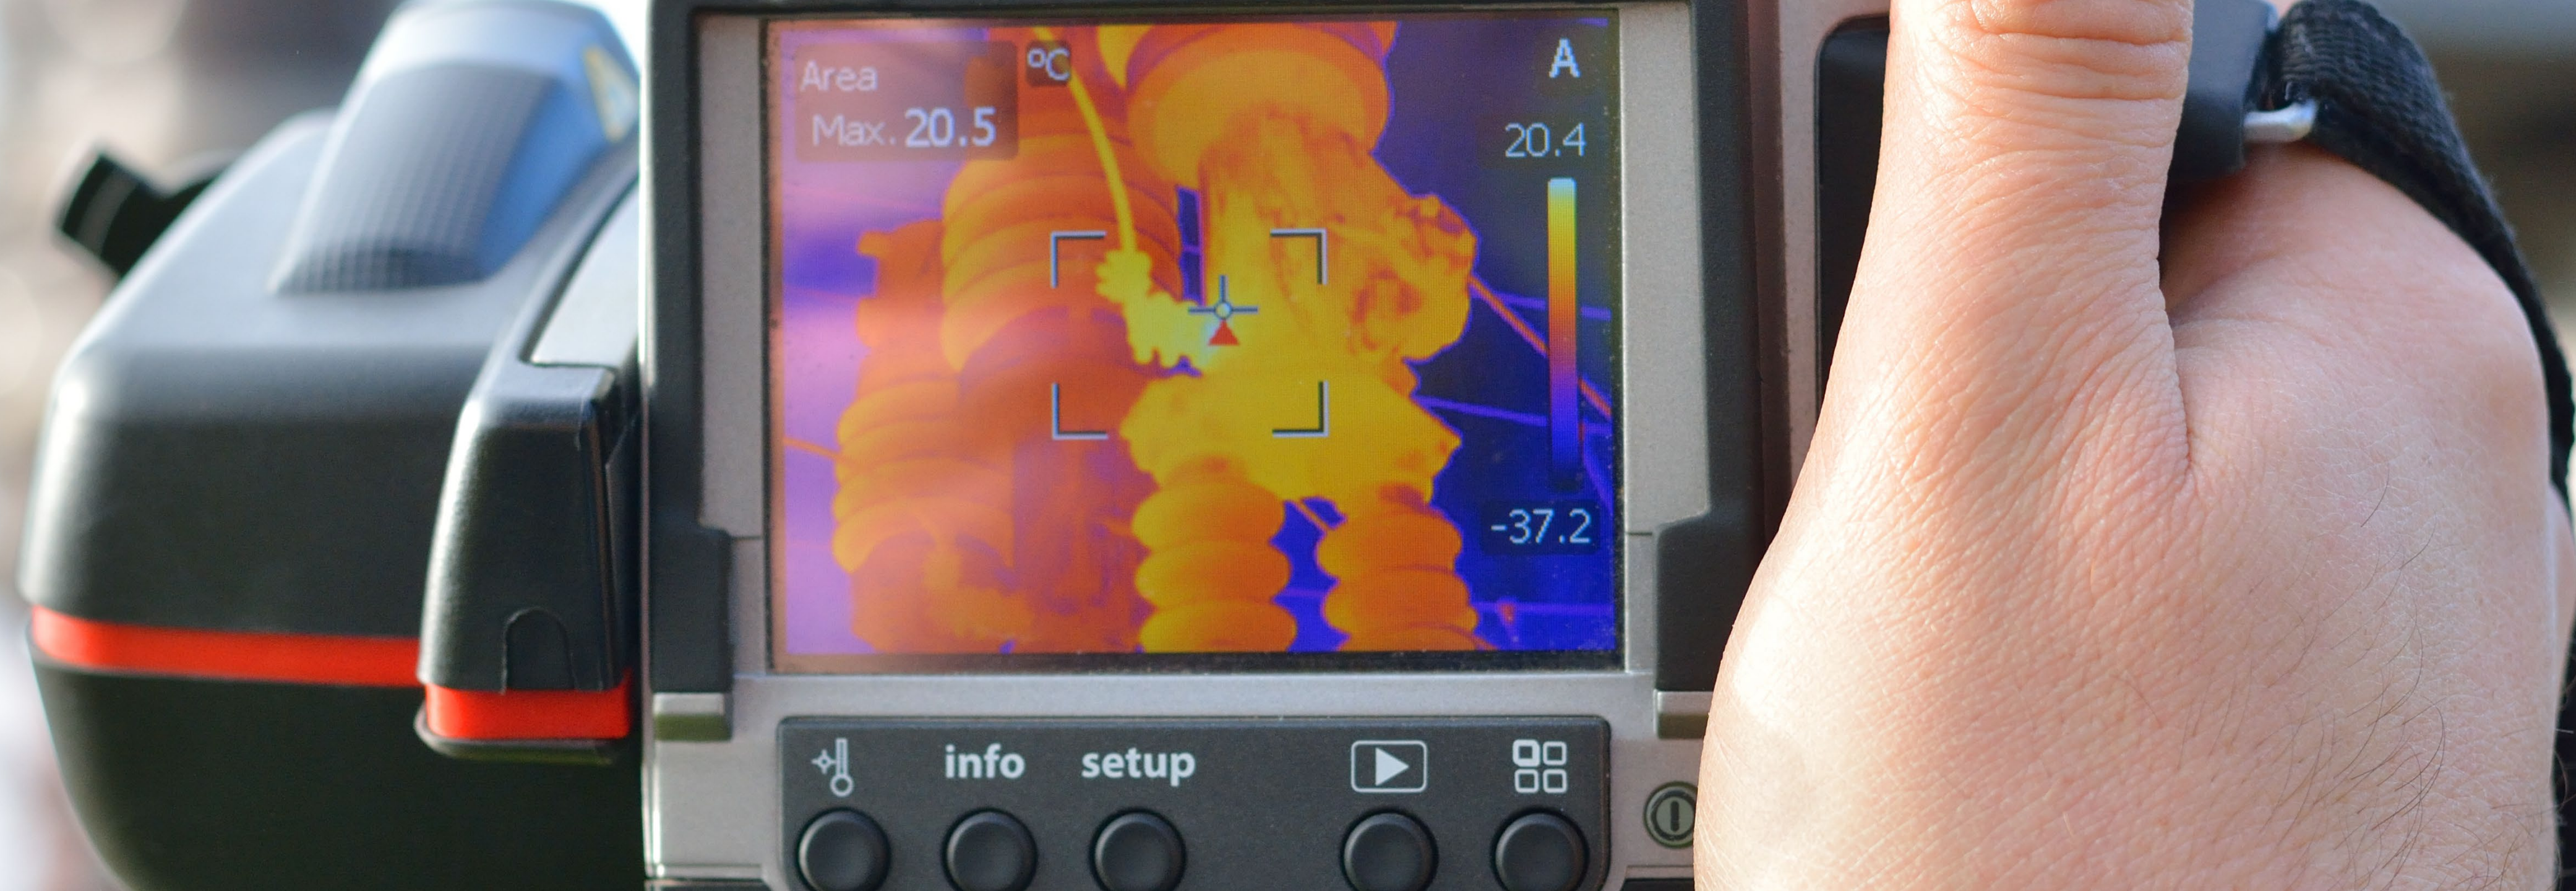

Our Vibration Analysis Services can be done on an “as needed” call out basis or can be tailored into a Predictive Maintenance Program (PdM) that will improve reliability, increase safety, optimize asset life, and enhance production and operating efficiencies.

With our Vibration Analysis Services, you can expect:

- Database Development.
- Data Acquisition and Analysis.
- Troubleshoot recurring problems with root-cause analysis.
- Data Management and Concise Reporting.
- Corrective Actions Plan.
- Improve your equipment reliability and up-time.
- AND MUCH MORE ...

Keep rotating machinery in top condition with vibration monitoring and analysis

Thermographic Survey

See your problem before they occur

A thermographic survey is a visual investigation, carried out by a qualified engineer, to detect abnormally high temperatures. Our thermographic survey gives you the ability to implement a predictive maintenance strategy, which gives your business the ability to control & manage the potential failure of your equipment.

Our comprehensive survey report gives your maintenance team the information required to plan in maintenance activity on the relevant equipment highlighted by thermal images. This reduces the need to carry out reactive repairs during production and in turn eradicates costly and potential catastrophic failures.

Noise Survey

Noise, or unwanted sound, is one of the most common occupational hazards. Exposure to high levels of noise may cause hearing loss, create physical and psychological stress, reduce productivity, interfere with communication, and contribute to accidents and injuries by making it difficult to hear warning signals.

SES comprehensive noise survey helps your company to identify different noise level areas. We plot the sound level data on a floor plan resulting in a noise contour map, which provides a simple representation of the sound field over the workplace. Besides identifying regions of noise levels, these map may also be used to visually educate and train workers regarding where hearing protection is mandatory, and as a tool for identifying hot spots for potential noise controls.

Heat Stress Survey

Unless someone collapses from heat exhaustion, the possible health effects of working in the heat may not be obvious. This means it requires employers to identify whether those employees who may be at risk from heat stress are suffering from any heat-related illnesses.

The survey objective is to help employers, managers, occupational health professionals and safety personnel to minimize or reduce the risk of heat stress in your workforce..

Illumination Survey

Light Assessment or Lux Level survey is conducted to identify excessive bright light, glare, low light or flickering light to avoid potential hazards and evaluation of risk to improve employee safety.

Sufficient Lighting has major impact on performance and efficiency of the employees at workplace. It helps them to read labels and safety instructions clearly without any hurdles, to make sure prevention of health hazards of employees.

Therefore, there should be appropriate light fall on work area of the employees. Too much bright light (High intensity), Strong glare, Low light, or continuous flickering light are unsuitable for workplace.
