

BODY CARE AFTER DEATH: OPTIONS FOR DISPOSITION

What is disposition?

In death the word disposition refers to the manner in which human remains are handled.

How do I learn my options?

Some common methods of disposition are shared in this zine. There might be a care worker, doula, social worker, or funeral director that can help answer questions and support you to make the choice that is right for you.

How do I document choices?

Disposition of remains is often carried out in accordance with a person's documented wishes (living will, death plan, Disposition Authorization, etc.), the above referenced instruction, designated agent, and/or any documented surviving kin if a designated agent is not named.

Shroud:

A shroud is a fabric covering. Shrouds can be made from animal skins, a bedsheet, and elaborate fabric, all of which are able to do the important work of swaddling the body of the dead.

Coffin:

A coffin is a specially designed box that holds a deceased person's body. It can be made of cardboard, woven, or shaped from wood. Coffins are used for viewing or keeping a corpse.

Both a shroud and a coffin can be for either for burial or cremation. Consider biodegradable materials, which are also required to be used for alkaline hydrolysis, natural organic reduction, and green/natural burial.

THANK YOU!

Cremated remains can also be buried, placed out in the sea, scattered in a special place, or kept with you.

Burial at Sea:

Human remains are placed in the ocean. This happens at least 3 nautical miles from shore, often from a boat.

Cryogenic Freeze:

Low temperature freezing of a body near or soon after death, often with the hope of revival.

Mausoleums:

This is a structure, tree, building, or monument serving as the interment space or burial chamber of a the deceased.

Cremation:

Cremation is the process of burning the body of the deceased at very high temperatures until there are only brittle, calcified bones remaining.

Alkaline Hydrolysis:

AKA Aqua-cremation, this is a combination of water flow, temperature, and alkalinity used to used to return a body of the deceased to minerals and water, leaving bones.

What happens to the bones?

The bones are often put into a machine called a cremulator, and pulverized into what people commonly refer to as ashes. These remains can be kept in a container, buried, scattered or incorporated into objects as part of the last rites of death.

Transportation of the Body Plan:

Who, What, When
How to Carry a Body
Learn Local, State, or National regulations
Obtain a Permit

Tree Pods, Eternal Reefs, and Mushroom Suits:

One can have their remains interred in a biodegradable urn and planted on either private property or in a burial site. Or, plant trees and plants directly on top of the grave.

A small structure or reef can be made of cremated remains, stoneware, or concrete and placed on the ocean floor as a memorial.

Mushroom suits are creative and unique wrappings made from living materials. While biodegradable, their effectiveness for aiding in process of decomposition is still being researched.

Natural Organic Reduction (NOR):

NOR creates an environment in which beneficial microbes thrive, with a specific moisture content and ratio of carbon and nitrogen materials.

The decomposition process is aided by breaking down matter, adding water, and ensuring proper aeration by regularly turning the mixture.

Green Burial:

Usually a burial directly in the ground without embalming, in a biodegradable container. Often allows for and encourages a high level of participation.

BODY CARE AFTER DEATH: OPTIONS FOR DISPOSITION

Consider the following documents for planning death care.

Medical

POLST/DNR (Physician Order for Life Sustaining Treatment)
Pain Management Plan
Advance Healthcare Directive
Mental Health Advance Directive
Durable Power of Attorney HEALTHCARE
Living Will Registry Donate (if donation is wanted)
Shared all this information with at least 3 others

Legal

Will OR Trust
Executor OR Trustee
Durable Power of Attorney FINANCE
List of Passwords Accounts Policies
Funds for Arrangements Where is the \$\$?

Death

Disposition Authorization
Burial or Cremation or NOR (Plot/Niche/Scatter)
Vital Statistics/ Planning form (Info for Death Certificate
Obits, Service, Memorials)
Designated Agent for FUNERAL
Document Storage / Service

NOTES, DETAILS, & IDEAS FOR DISPOSITION:
