<i>Lip</i>	<i>3-6 Months</i>
<i>Smiley</i>	<i>1-2 Months</i>
<i>Tongue</i>	<i>1-3 Months</i>

- *These are AVERAGE healing times with the expectation that the piercing has been performed properly, implant-grade jewelry of appropriate size and style has been used, proper aftercare procedures are adhered to, and trauma to the piercing area is kept to a minimum. Healing times can vary wildly depending on a number of different factors.*
- *Healing multiple piercings simultaneously increases healing time as your immune system has to work harder to heal everything collectively. This is also affected if you are healing a tattoo(s), become ill, are recovering from a medical procedure, or have a chronic health issue.*
- *It is not advisable to remove or change jewelry in any piercing you wish to keep that is actively healing without the assistance of a professional piercer.*
