

iClean® FLO₃

for Toilets

Controlling restroom odors between cleaning jobs is challenging for many commercial building owners. Standard solutions may include automatic air fresheners, urinal pucks, and scented screens; however, these products tend to only 'mask' odors behind artificial fragrances rather than resolve them at the source.

DESIGNED FOR PROFESSIONALS

The System

iClean FLO₃ takes a different approach, revolutionizing restroom freshness by instantly transforming municipal water into a powerful cleaner and deodorizer in-line for toilets and urinal applications.

AUTOMATIC

Works on demand, cleaning and deodorizing the pipework of toilets and urinals with every flush.

DEEP DEODORIZATION

Controls and neutralizes everything in its path, including the offensive odors in the plumbing system.

PREVENTATIVE

Prevents the formation of biofilm build-ups in sewage pipelines, maintaining pipework.

The Solution

iClean FLO₃ harnesses the natural oxidizing power of aqueous ozone, delivering simpler, safer, and more effective results than traditional cleaning chemicals and deodorizers.

EFFECTIVE

Delivers longer-lasting, faster-acting freshness by attacking and neutralizing odors at the source rather than masking them.

NATURAL

Replaces air fresheners and urinal pucks with a natural solution, reducing product costs while keeping chemicals out of the environment.

CLEAN

Cleans while it deodorizes, helping to minimize the build-up of grime that contributes to toilet bowl rings.
