

NexGen Stone Cleaning Instructions for Stubborn Marks

Things Required

Crème Cleanser

Non-Scratch Sponge

Microfiber Cloth

Water

Step 1: Apply the crème cleanser to the rougher side of a non-scratch sponge (pictured below)-look for packaging labeled "non-scratch," typically sponges with a blue indicator. Avoid abrasive sponges like those with a green abrasive side).

Step 2: Wet the sponge quite thoroughly

Step 3: Clean the bench in a circular motion; the cream cleanser should lather (foam/bubble), applying gentle to light pressure.

Step 4: Remove soap residue with a clean damp microfiber cloth and allow it to air dry.

(this step is important as it ensures that no crème cleanser residue dries and is left behind which will leave the benchtop looking streaky)

Step 5: We recommend repeating this process on a regular basis which will assist in removing any build-up.
