The new 2011 5 liter Mustang was sighted in North Texas this past weekend. The new Mustang made an appearance at the monthly Second Saturday Cruise Night at the Cracker Barrel restaurant in Lewisville, Tx. Crowds formed and pictures were snapped of the beautifully evolved Ford Mustang.

The Ford Mustang has long been a symbol of American muscle cars. Look around and you can't go two blocks without seeing a Mustang cruising down the road. Throughout the years Ford has evolved and improved the Mustang to keep up with the competition. Unlike some of it's competitors, the Mustang has survived tough economies, gas crisis, and strong competition.

The Mustang now has another speed bump to go over, the rebirth of the Dodge Challenger and the Chevy Camaro. Mustang has not had great competition in the past few years with the last generation of the Camaro and the Pontiac Trans Am

being discontinued. The new muscle car competition along with the environment and economy are now major challenges for Ford.

The 2011 Mustang has a 31 MPG, 305-HP V6 and an optional 26 MPG, 412-HP 5.0 V8 engine which delivers a stiff blow to the competition. Ford is concentrating on the environmental impact that poor gas mileage vehicles have and has developed powerful, tire shredding cars that will be easy on the environment and pocketbook, and tough on the competition.

Ford has kept up with technology and provides customers with the latest in safety, performance, and comfort in each Mustang it sells. Mustang continues to stay ahead of the game and makes adjustments and improvements with each year model in order to ensure the continual evolution of the American muscle car.
