

## Recommended Application Rates

Dry Application: (Recommend a 10% per volume mix)

Example: for a 25-litre bag of soil you would use 2.5 litres of compost

Or 1 yard of soil (765 litres) would take 76 litres of compost  
½ yard would take 38 litres

---

---

Wet Application: (Recommend a 15:1 ratio of water to compost)

Example: For a 19-litre pail of water you would use 1.2 litres of compost  
For a standard 2-gallon pail use 2 cups of compost

Method: *Put compost in a mesh bag or stocking and immerse in water, stir vigorously for 10 minutes then water your garden or potted plants*

---

---

Starting Seedlings: (Recommend a 20% per volume mix)

Example: Mix 200 ml of compost into 1 Litre of soil

Or Mix 5 litres of compost into a 25 Litre bag of soil

---

---

## Application by Total area of Garden

Assumptions: *4" depth of soil at a 10% application rate*

Recommendation:

For every 10 sq. ft of garden work in 8 litres of compost to existing soil
