We are looking for a high-performing Electric/Electronics Documentation Engineer to join our team. If you have what it takes besides strong academic qualifications, it could be you flourishing in our team culture of empowerment, personal development and fresh thinking.

The position will bridge between different elements of R&D ranging from Battery systems Engineering to Production departments via production of technical documentation. We are constantly looking to innovate and adopt new technologies, so you should be able to embrace constant learning.

## Responsibilities:

- Collaborating with electrical and mechanical engineers to document system level design and test methods.
- Preparing a variety of technical documents, technical drawings, BoM, Assembly manuals, Test reports, etc.
- Reviewing and ensuring technical accuracy within project documents, such as completeness, formatting, and compliance with project requirements.
- Submitting project documentation for approval.
- Providing support to the assembly and testing teams.

## Main Tasks:

- Documenting component and system specification with highest standard.
- Making technical drawings, assembly manuals, test reports, BoM.

## Requirements:

- Bachelor's Degree (mechanical engineering background).
- Excellent knowledge of English.
- Excellent understanding of CAD software (preferably Inventor or CATIA).
- Good knowledge of technological processes.
- Self organized and goal oriented.
- Highly communicative team player.
- At least 1 year of professional experience.

## Advantage:

- Good knowledge of production technology.
- Broad experience in engineering.
- Experience in developing own templates for reports and forms.
- Experience with creating high standard technical reports and documentation.
- Ready to take on big challenge and grow with the company.
- Organized, methodical person.
- Knowledge of LaTeX or similar word processor.
