Biosirus Inc.

Biosirus Delivers Second Nextgent Global, India order for Tata Power Cable Bend Restrictor Projects in Mumbai, India

Monday May 11, 2026, Markham, Ontario, Canada

Biosirus Inc. (www.biosirus.com) is pleased to announce that it has completed its second pilot order to Nextgent Global, India for Tata Power (www.tatapower.com) cable bend restrictor applications of direct buried cables in Mumbai, India.

50 pcs of 1m long, Hardlock 160mm Split Pipes Cable Protection System

The pilot evaluates the ease/efficacy of the retrofit cable protection system on existing direct buried cables. Direct buried cable runs the risk of third-party utility excavation which result in the free-weight of the cables and cable joints hanging in the air (sometimes for extended periods of time). This results in acute cable bends and cracks in cable joints. The use of such split pipes allows wrapping such cable joints (where needed) to prevent excessive sags and bends. These split pipes can be reused at another location when needed.

This is the first of its kind Indian utility application for direct buried cable protection system.

The Split-Pipes offer a single inventory - all terrain - all industry applications - cable protection system that substantially lowers field cost and time ([Cable Protection System | Biosirus Inc.](#))
