

PCB Carolina Event Nov 8th, 2023
3:30 PM Room 5

**Technical session title: "High-end
Crystal Oscillator considerations and
benefit for a smaller oscillator"**

Speaker: David Kenny – Pletroincs
<https://www.pletronics.com/>

**Electronic Components
Mechanical Components
Contract Manufacturing
Test Services**

*Experience,
Support &
Beyond*

<https://www.auroragroup.net/>

The Aurora Group is a premier manufacturers' representative firm with over 30 years experience providing exceptional service and support to our manufacturers and customers on the East Coast.

The Aurora Technical Group – what we do

The Aurora Group is committed to facilitating electronic/mechanical component solutions **for OEMs/CMs/Engineers and Manufacturers.**

We accomplish this by:

- Providing technical information/advice and support of quality manufacturers
- Guiding through technical challenges with new and existing products
- Offering component supply liaison/quotes/orders/samples/expediting

Aurora Technical Group – Southeast Team

NC, SC, GA, TN, AL, MS

Rick Vairo

Tennessee /Alabama/Mississippi
Sales/Business Development

Nelysa Rosario
nrosario@auroragroup.net
Market specialist

Markets we serve:

IoT products, Energy, Tel-
Com, Military, Aerospace,
Security, Medical, Telcom,
Industrial, Lighting,
Computer, Data centers,
Automation, Robotics,
Meters, Appliances,
Automotive, ODMs, CMs,
Contract Engineering.

Thank you for
your time!

High-end Crystal Oscillator (TCXO/OCXO) design-in considerations and benefits for a smaller OCXO oscillator

David Kenny, VP R&D

11/8/2023

Introduction to Pletronics

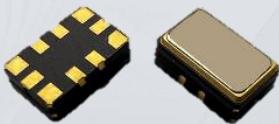

- Established in 1979, Pletronics boasts over four decades of engineering and manufacturing expertise.
- Pletronics offers a comprehensive range of precision frequency control devices, including OCXO, TCXO, VCXO, Clocks and Crystals.
- Our in-house capabilities encompass temperature testing, phase noise analysis and more, ensuring the highest quality standards.
- Pletronics has cultivated long term relationships with manufacturing partners in Japan, Korea and Taiwan, fostering a global network of excellence.
- In 2019, Pletronics was acquired by Taitien, a testament to our company's growth and potential.
- Even after the acquisition, Pletronics has maintained strong, ongoing partnerships with factories in Japan and Korea.
- Strategically located near Seattle, Washington, Pletronics is positioned to provide comprehensive support and technical assistance.

Pletronics Production Offerings

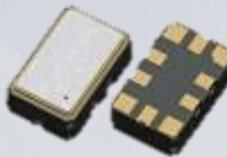

OeXO

Voltage Controlled
Crystal Oscillator (**VCXO**)

Crystal Oscillator (**OCXO**)

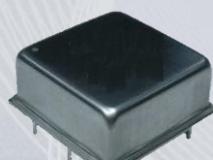

GPS Timing Module

OSI5 Series

36.3 x 27.2 mm

OLA5/OSA5
Series

25.4 x 25.4 mm

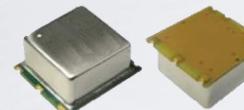

OSP5 Series

20.6 x 20.6 mm

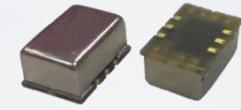

OSF4 Series

20.3 x 12.7 mm

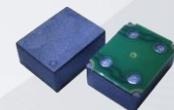

OSJ7 Series

25.4 x 22.1 mm

OSK6 Series

14.3 x 9.3 mm

OSN4 Series

9.7 x 7.5 mm

OHA4 Series

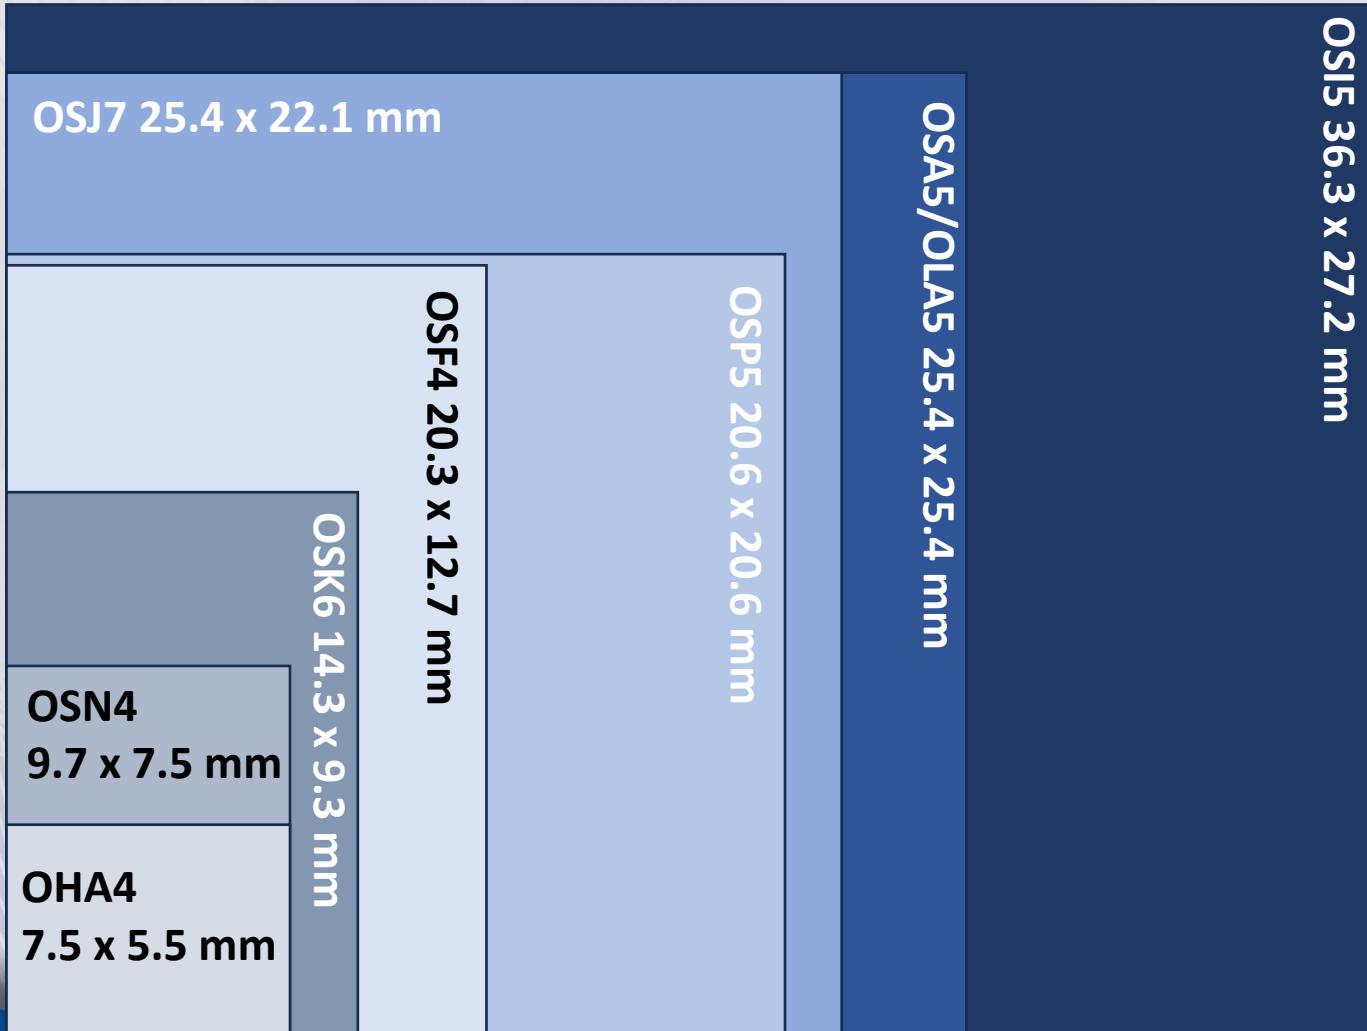

7.5 x 5.5 mm

Through hole type

Surface mount type

Package Size trends

Size Comparison:
OSI5 \approx 24 x OHA4

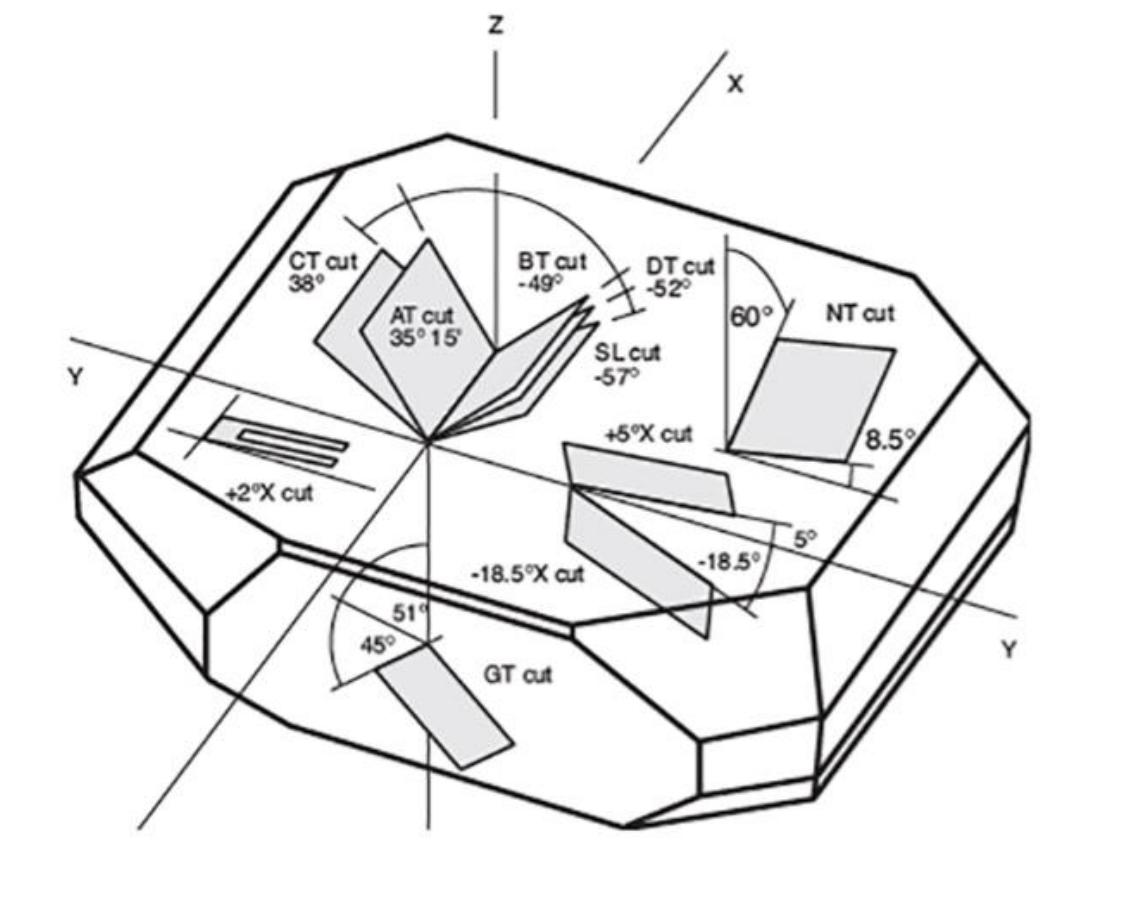

Comparison for OCXO

	Size	Phase Noise	Frequency Stability
OSI5	36.3 x 27.2 mm	-133dBc@10Hz -157dBc@100Hz -163dBc@1kHz -166dBc@10kHz	±1ppb
OSA5/OLA5			
OSJ7			
OSP5			
OSF4			
OSK6			
OSN4			
OHA4	7.5 x 5.5 mm	-110dBc@10Hz -143dBc@100Hz -158dBc@1kHz -163dBc@10kHz	±20ppb

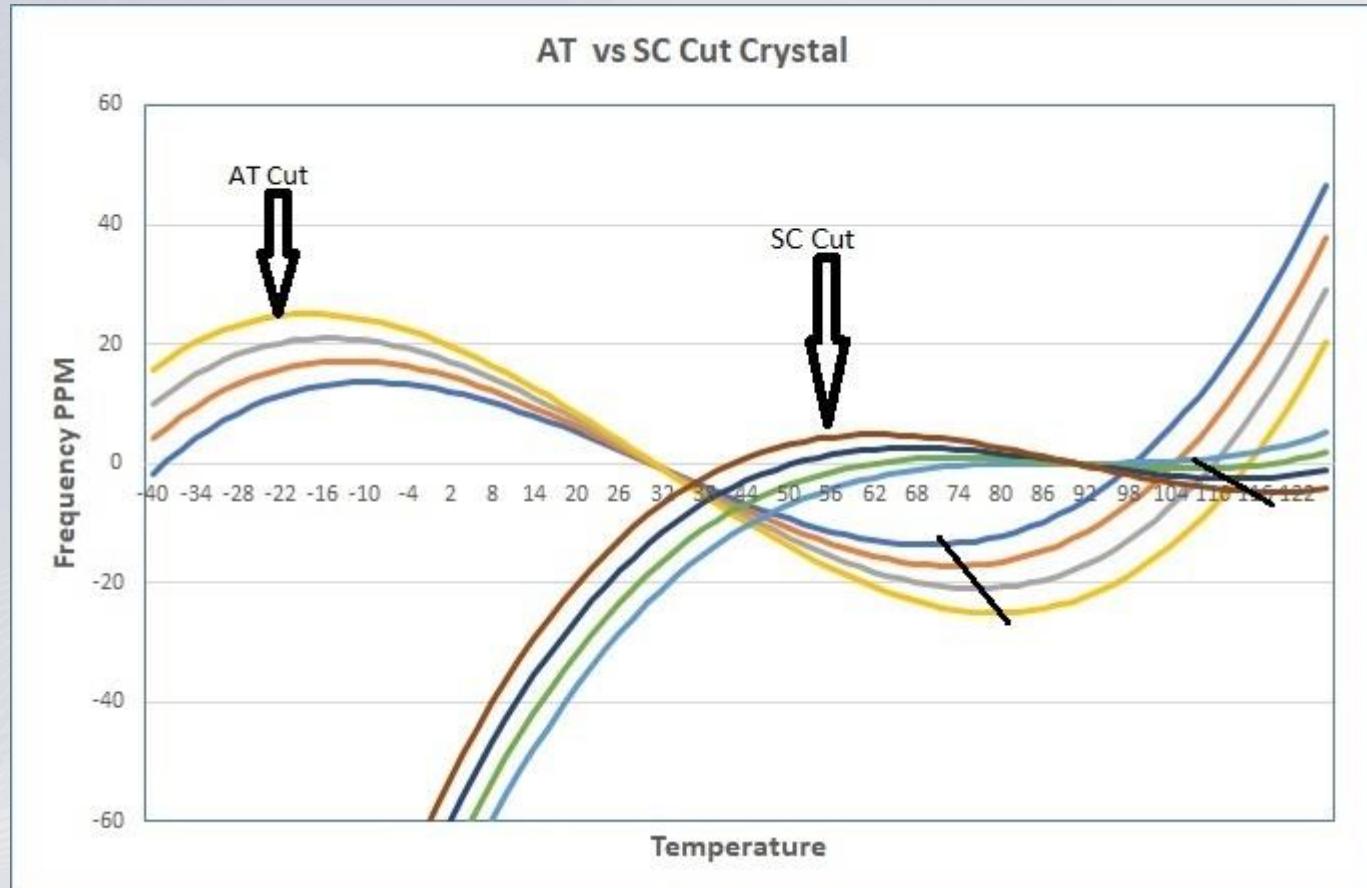

Understanding Quartz and Crystals

- Many different cuts of crystals
- The type of crystal is determined by the orientation of the cut
- The most common is AT and SC

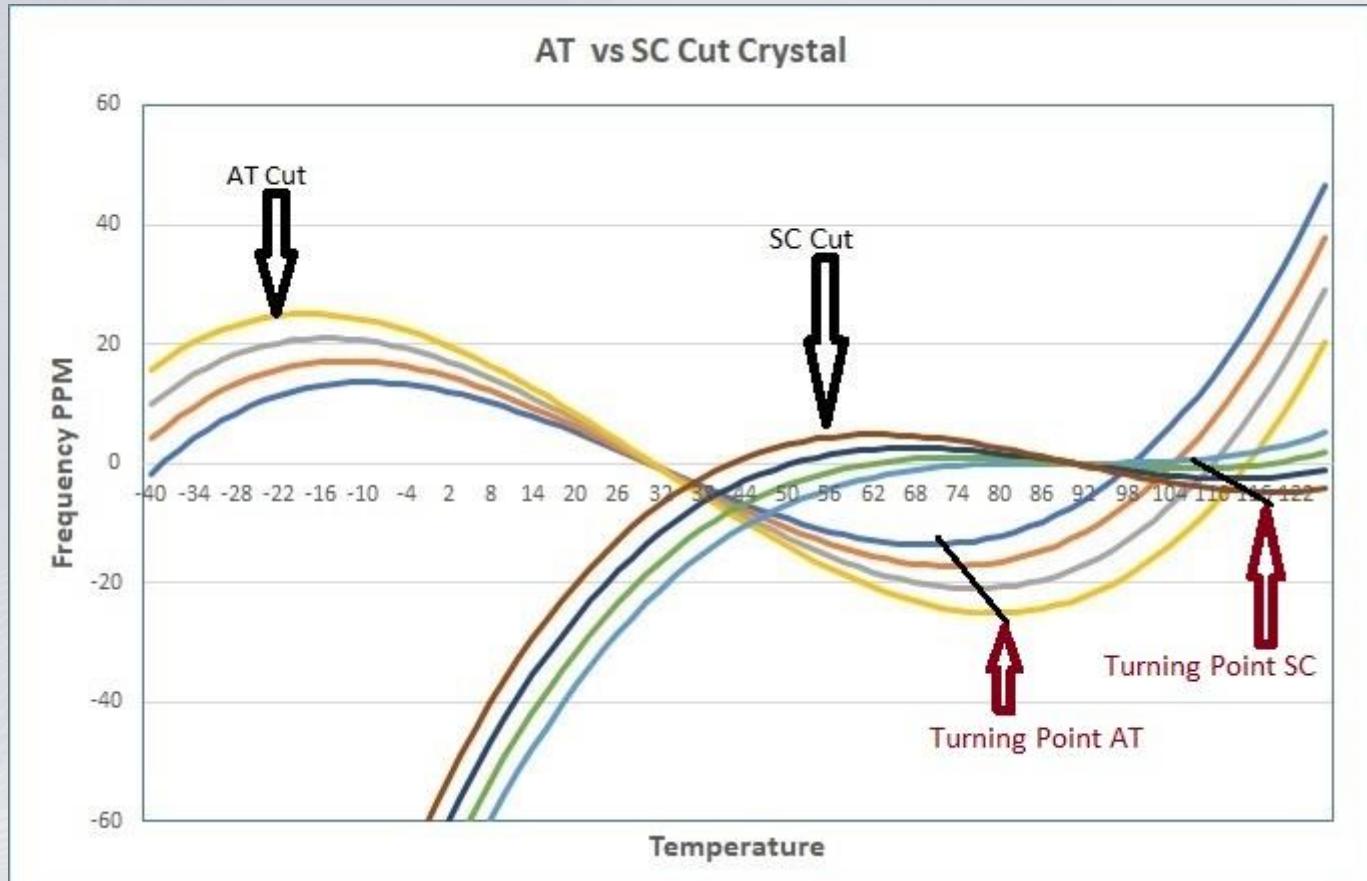

Key elements of OCXO Design

- Temperature sense and control circuitry
- Heater is typically a minimum of 10° above maximum operating temperature
- Best stability is lowest PPB / °C
- Layout to thermally stabilize the crystal and associated circuitry at a given temperature and minimize thermal losses

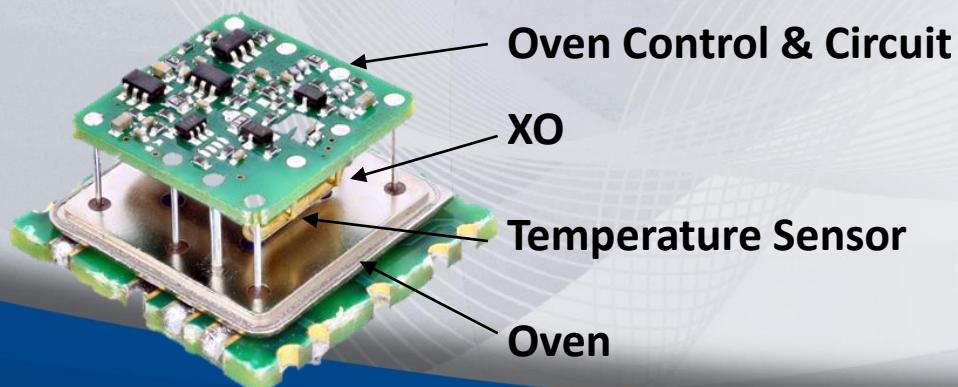

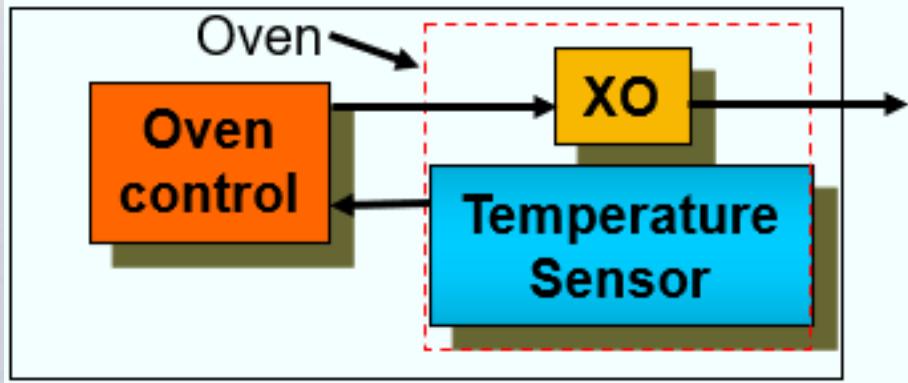

Key elements of OCXO Design

- Set the Temperature of the heater control circuitry to the flatness portion of the crystal turning point, Lowest PPB / °C
- The narrower the temperature swing, the greater the stability of the OCXO
- Layout to stabilize the crystal and associated circuitry while minimize thermal losses

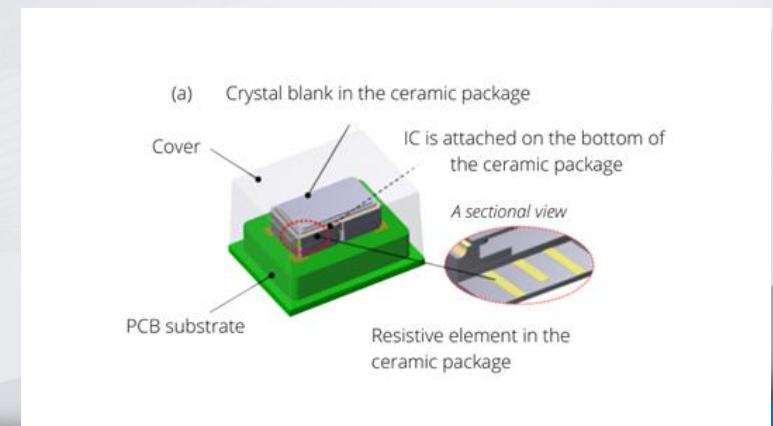

OCXO – Oven Controlled Crystal Oscillator

Block Diagram of OCXO

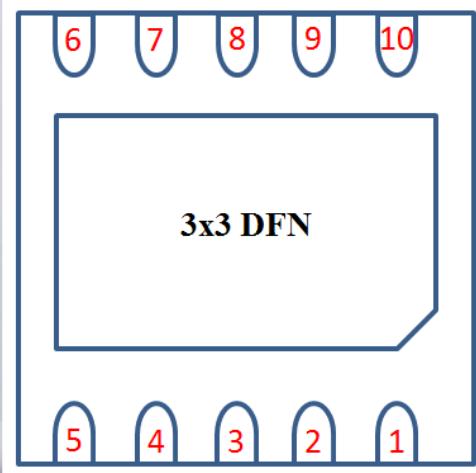

Considerations for Design

- AT Crystal
- SC Crystal
- Fundamental versus Overtone
- Controller Circuit
- Layout considerations to optimize thermal performance

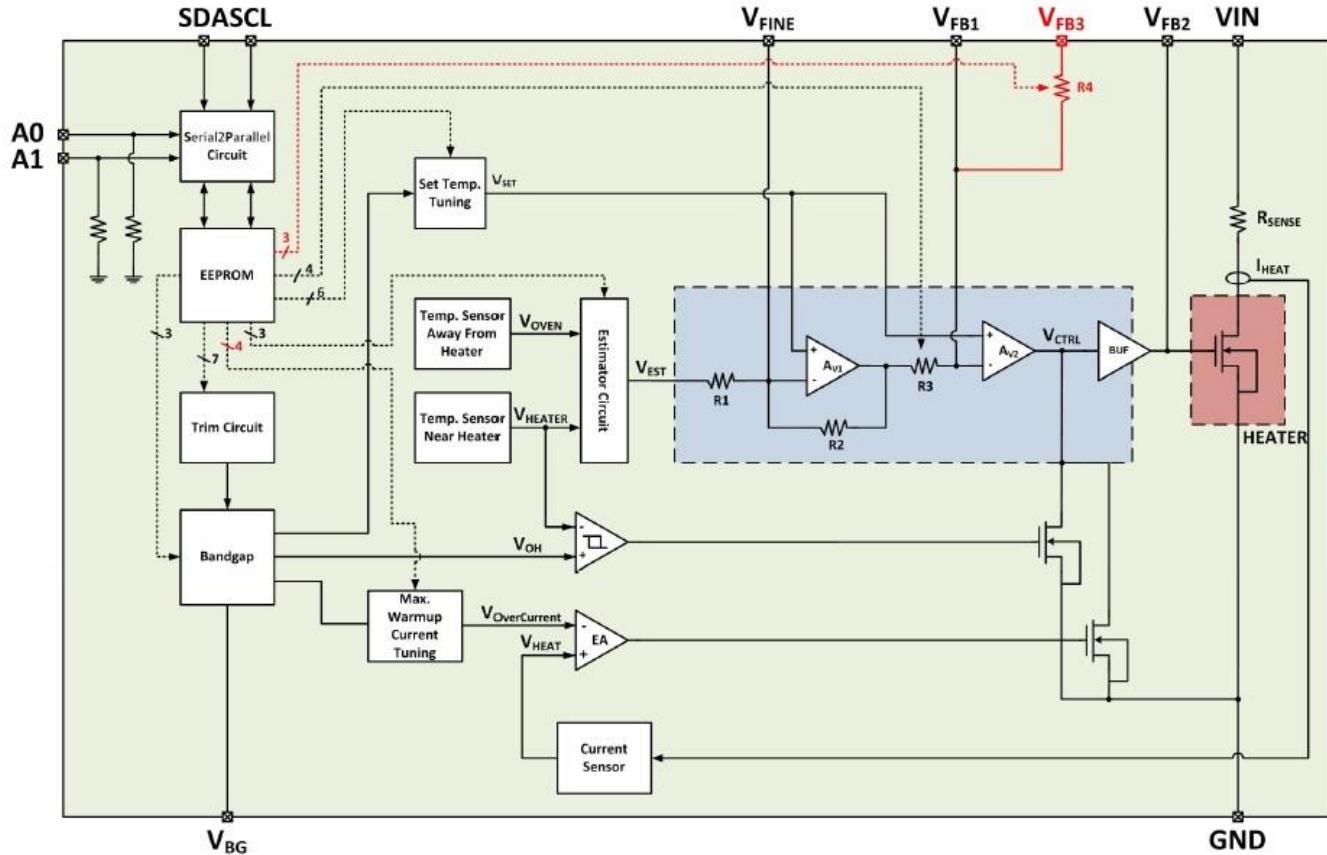

Key elements of OCXO Design

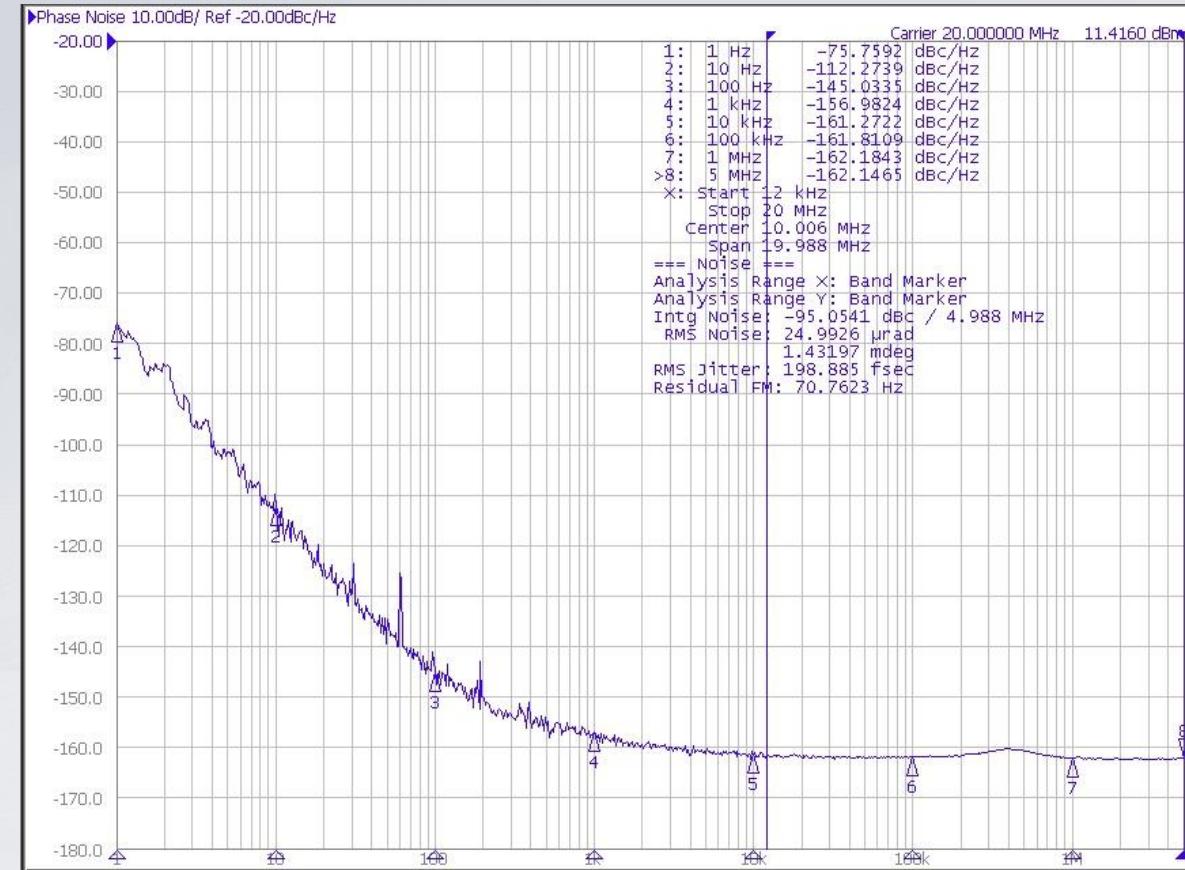

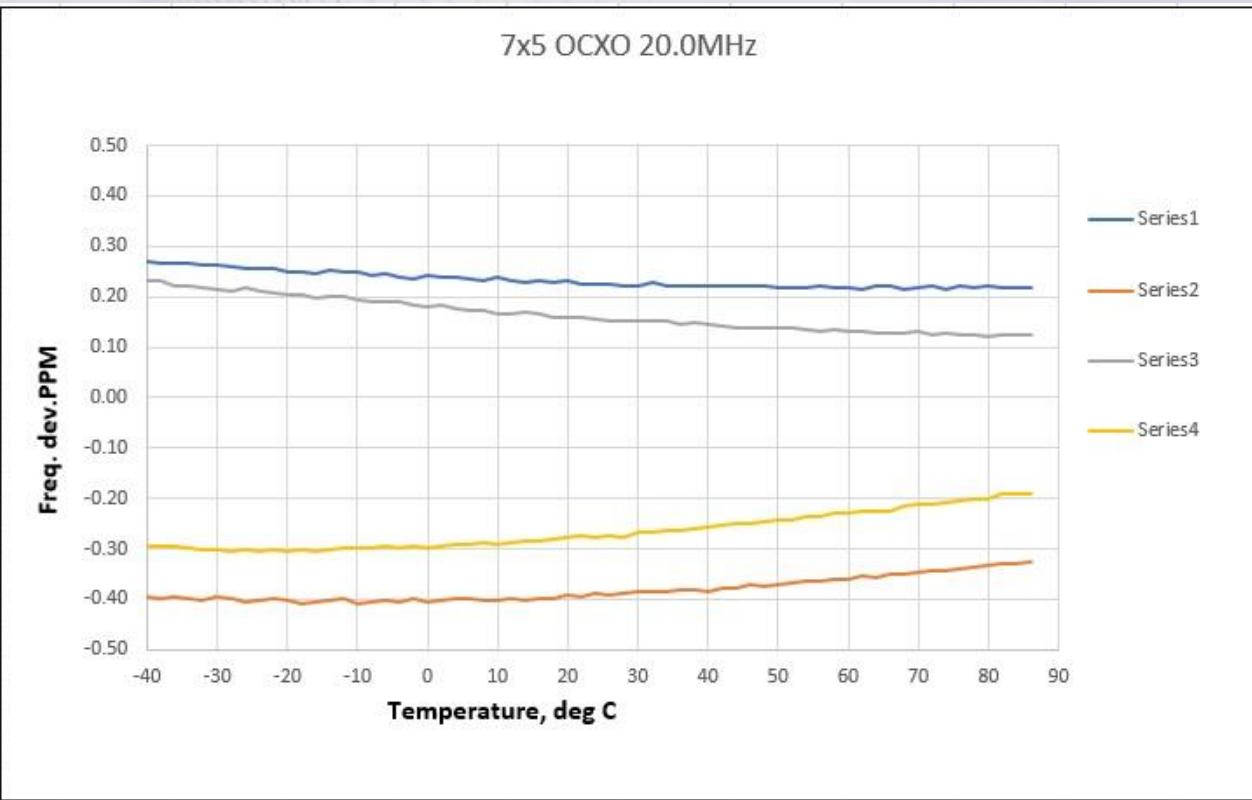

- Heater Controller
- Digital Control
- Smaller package

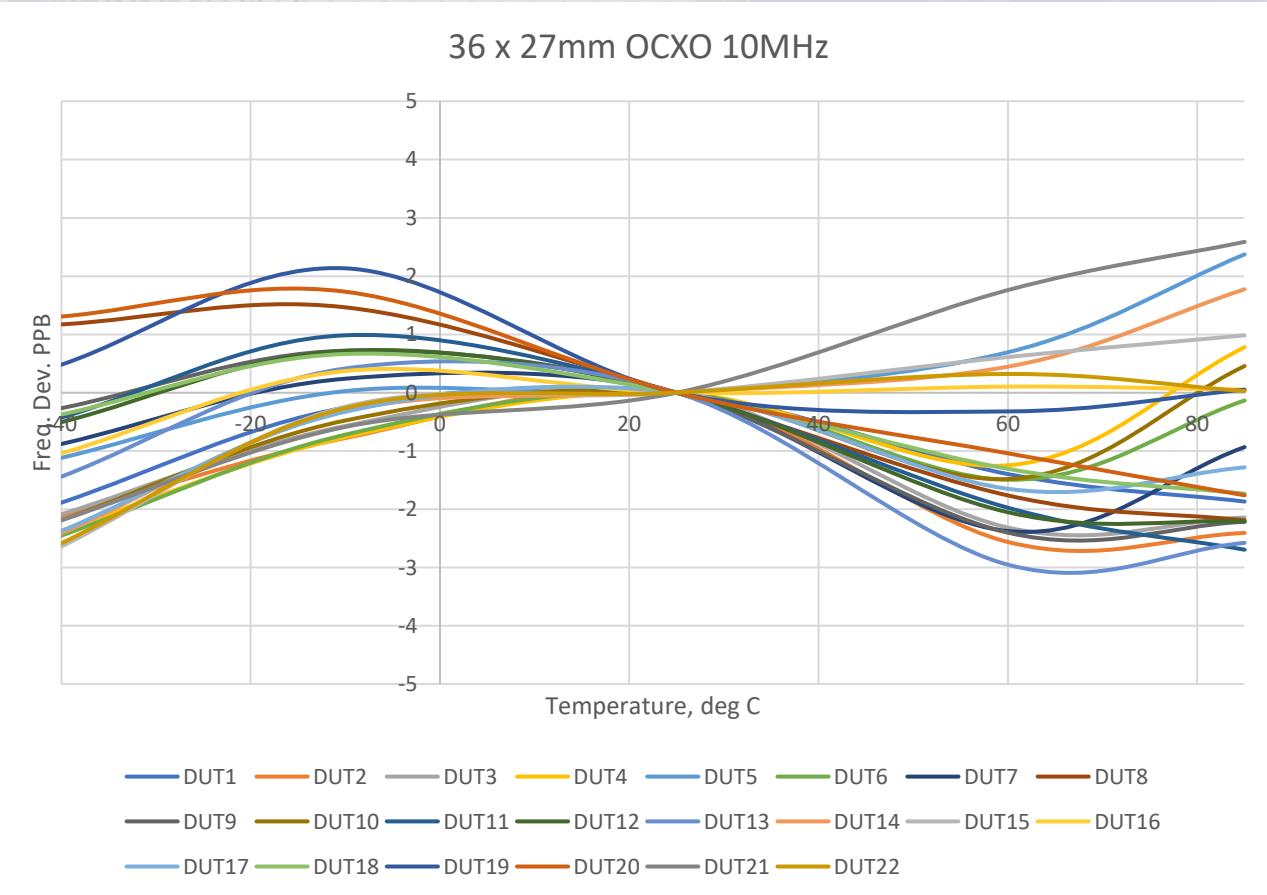

Block Diagram

Performance 7.5x5.5 OCXO

Performance Large OCXO

OCXO Considerations

- Form Factor
- Power
- Stability
- Warm up time
- Frequency
- Phase Noise
- Allan Deviation
- Aging
- G sensitivity

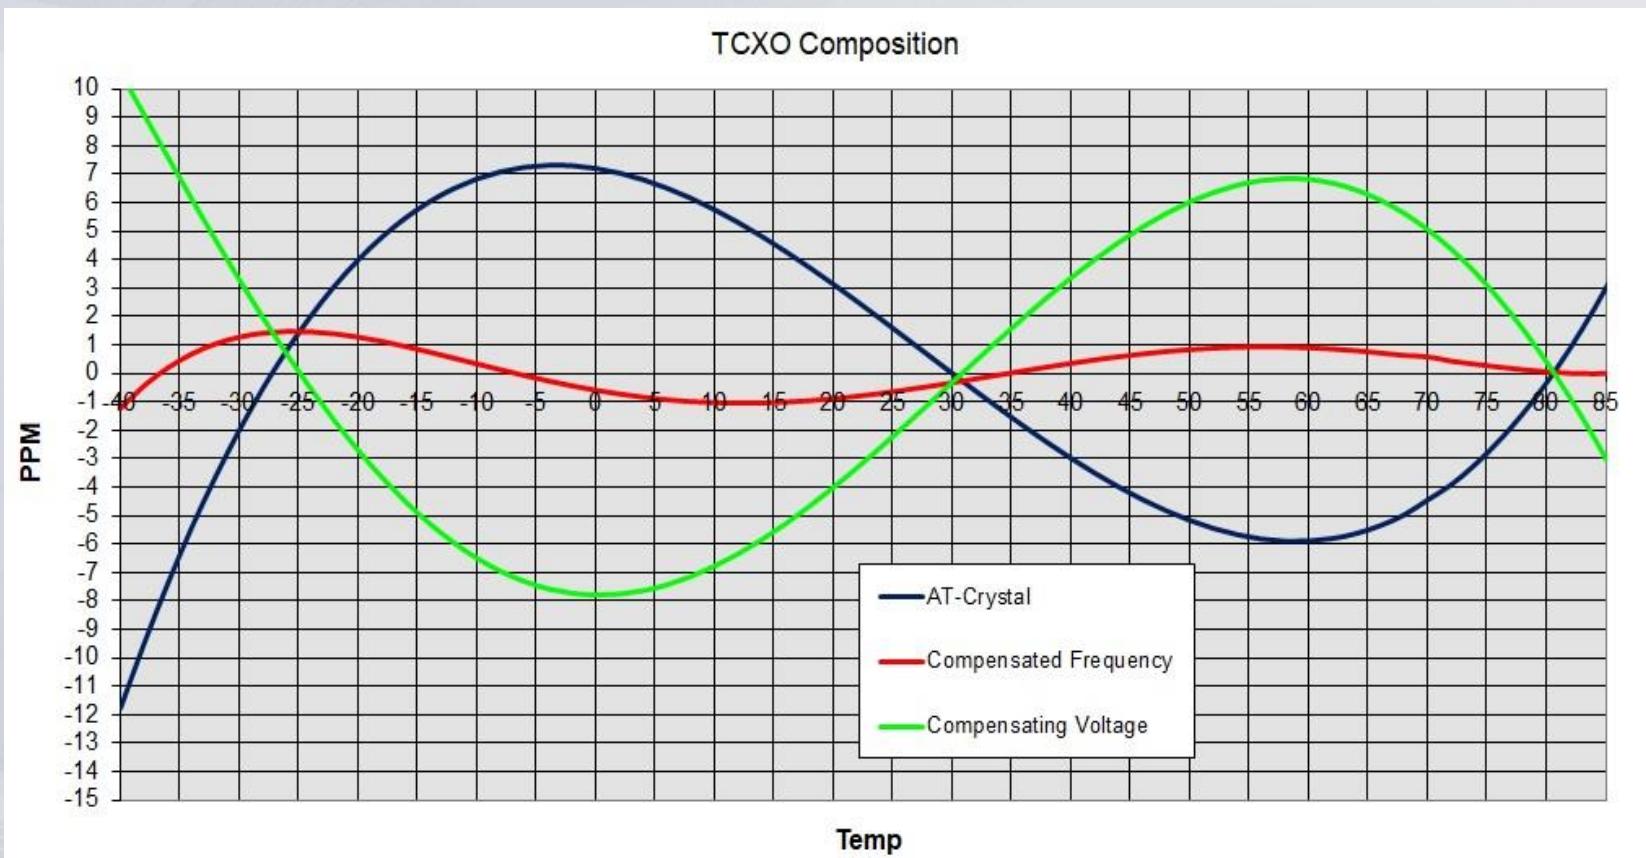

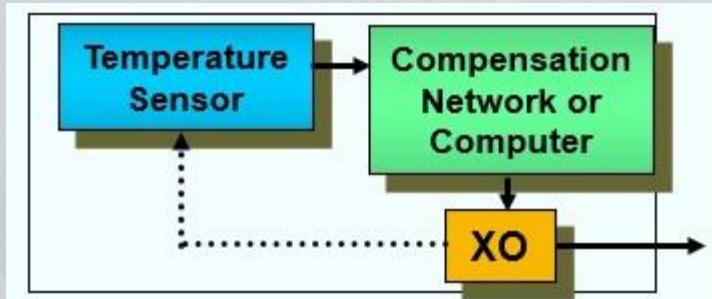

OCXO Specifications

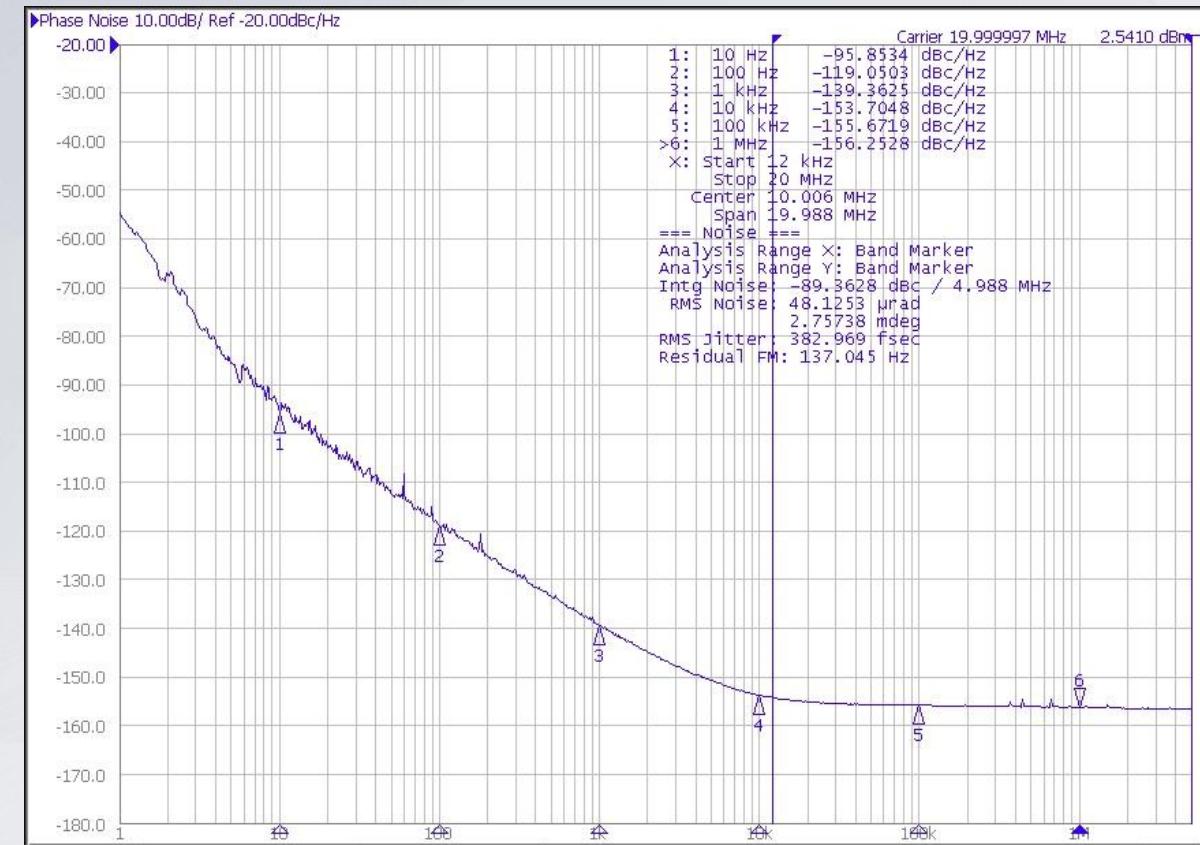

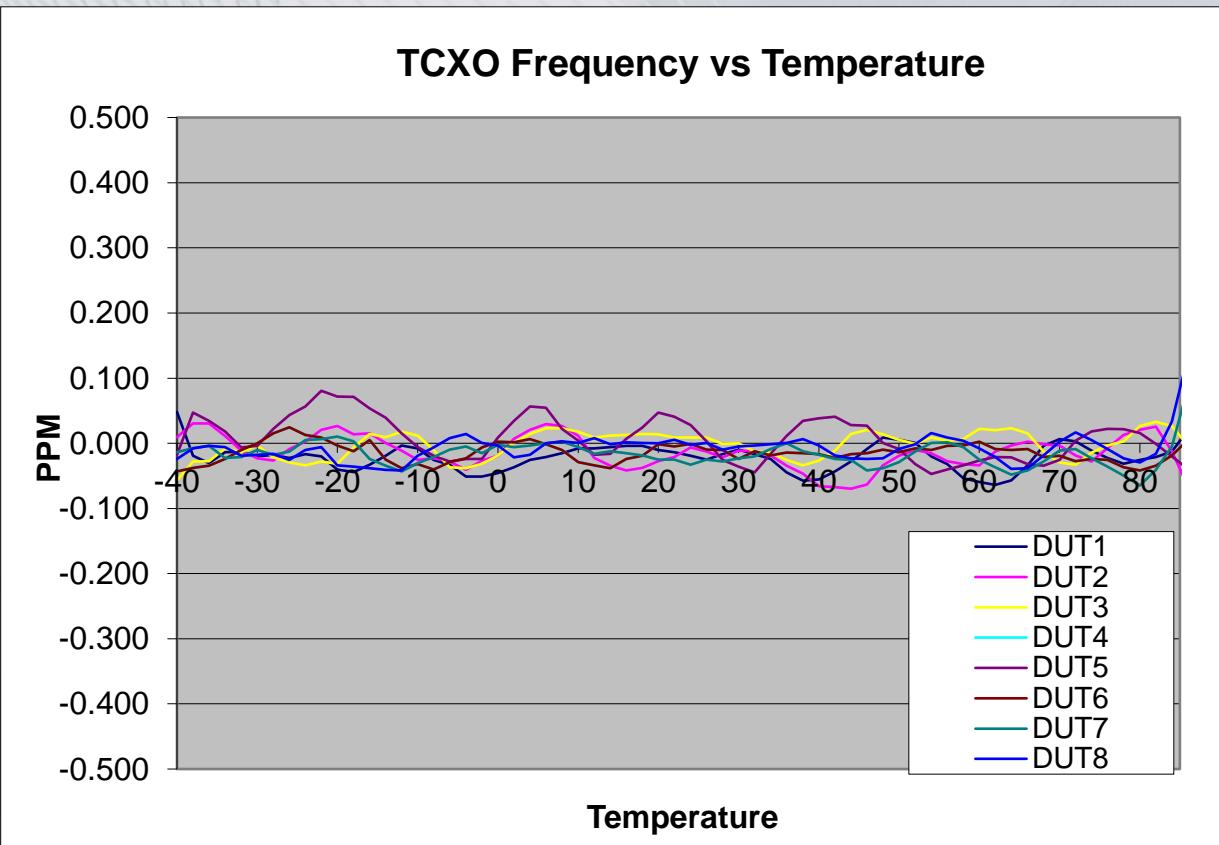

- Nominal Frequency/Stability - Limited
- Supply Voltage 3.3 – 12.0V
- Control Voltage/Pull range
- Aging
- Operating Temperature
- Output – Sinewave/CMOS
- Power Consumption/Warmup
- Phase Noise
- G Sensitivity

Key elements of TCXO Design

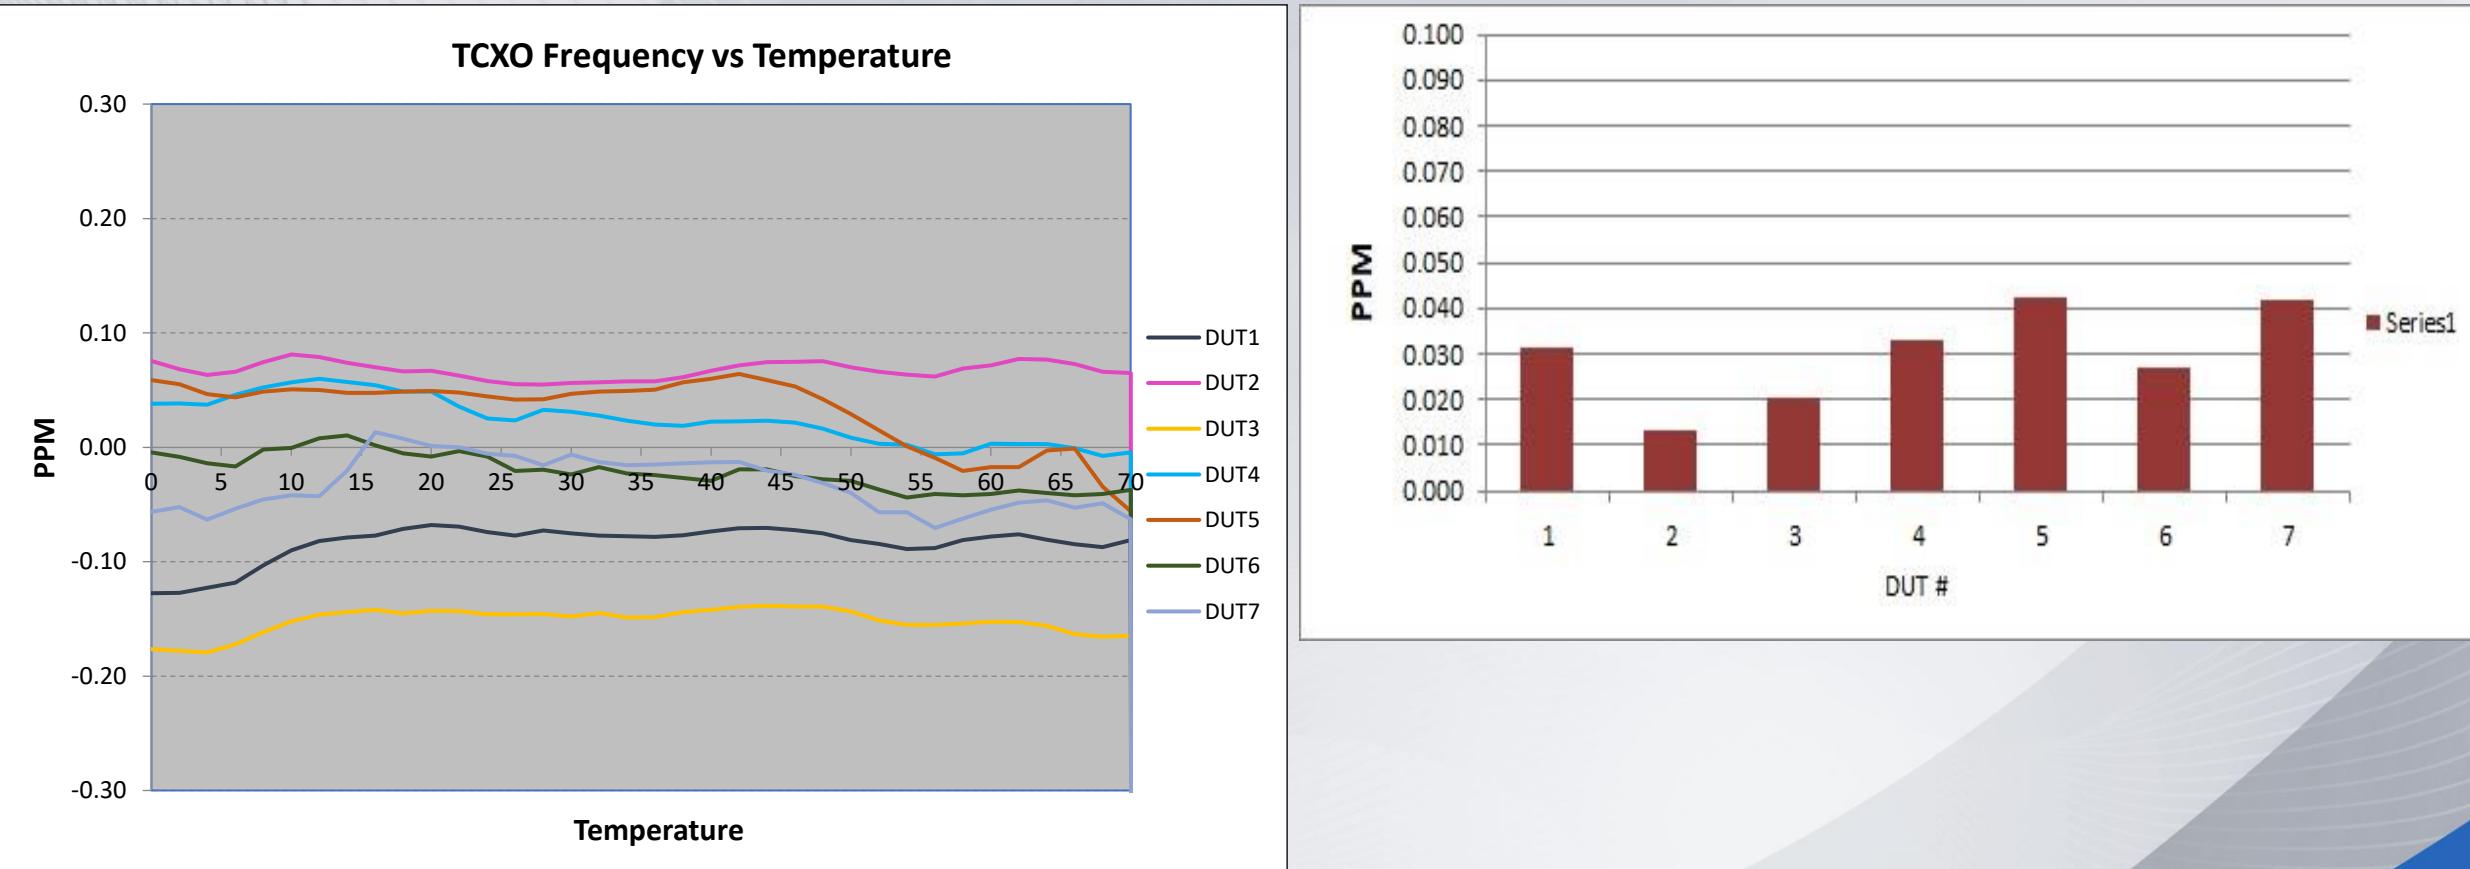

- AT Fundamental
- Temperature Sensor
- Compensation Network

High End TCXO Performance

High End TCXO Performance

TCXO Considerations

- Form Factor 2.0x1.6, 2.5x2.0, 3.2x2.5,
5.0x3.2, 7.0x5.0, 20x12
- Supply Voltage 1.8 – 3.3V
- Aging
- Stability 50 PPB - 2 PPM
- Start Time
- Frequency
- Phase Noise

AT Cut, Fundamental

TCXO Specifications

- Nominal Frequency/Stability
- Supply Voltage 1.8 ~ 3.3V
- Control Voltage/Pull range (VC Options)
- Aging
- Operating Temperature (Available up to 105°C)
- Output – Clipped Sine/CMOS
- Power Consumption
- Phase Noise

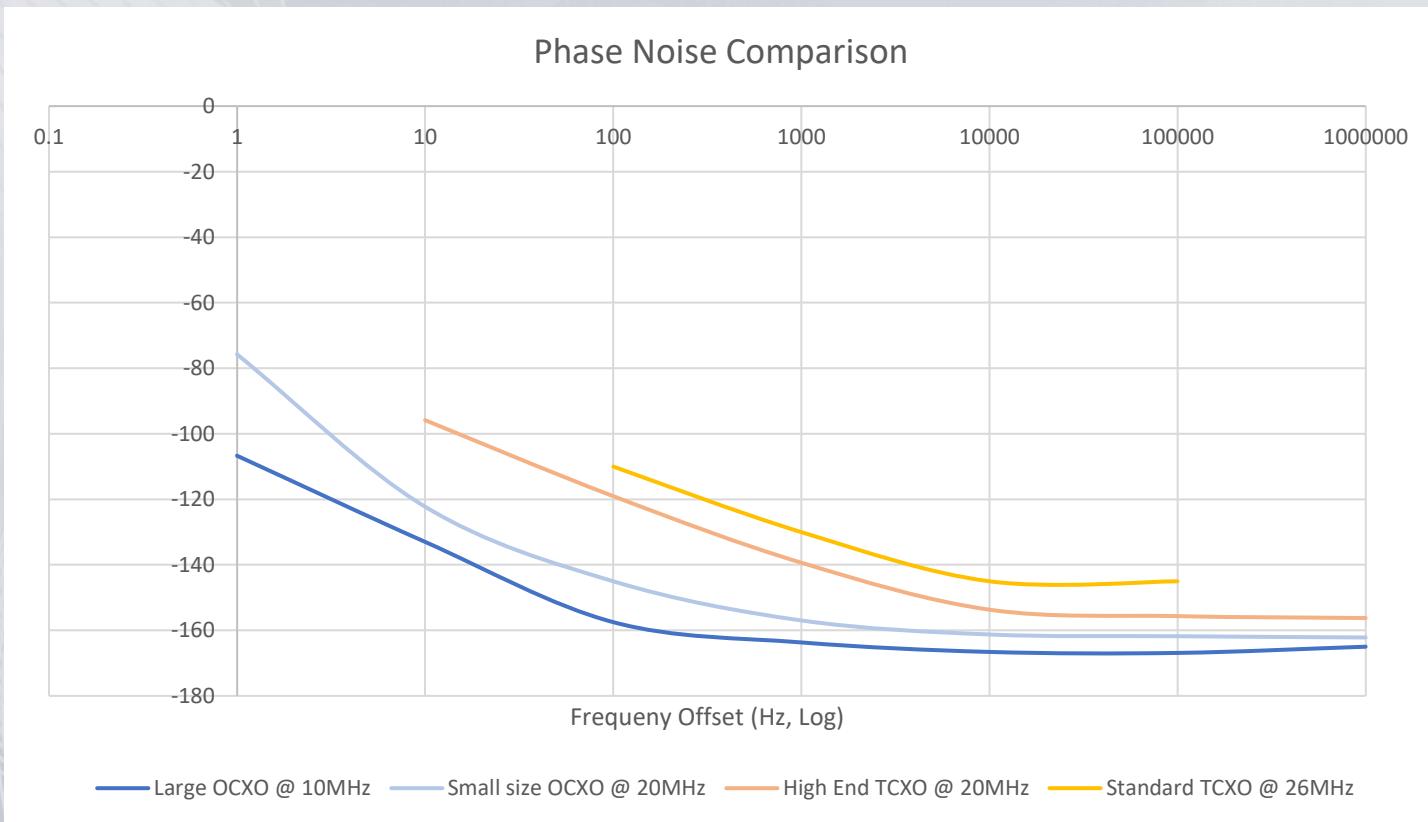

Application Considerations

- Remote Locations (Power Consumption, Temperature)
- Environmental (Power Consumption, Temperature, G sensitivity)
- Phase Noise (Application Specific, System requirement)
- Power (Battery operated?)
- Lifetime (Aging)

Comparison between OCXO & TCXO

	High End OCXO	Small Size OCXO	High End TCXO	Standard TCXO
Size	36.3 x 27.2 mm	7.5 x 5.5 mm	5.0 x 3.2 mm	2.0 x 1.6 mm
Stability	±1ppb	±20ppb	±50ppb 0-70°C	±2ppm
Power Consumption	2.1W (Steady State)	0.75W (Steady State)	~0.012W	~0.01W
Phase Noise	-130dBc@10Hz -153dBc@100Hz -158dBc@1kHz -160dBc@10kHz	-110dBc@10Hz -143dBc@100Hz -158dBc@1kHz -163dBc@10kHz	-104dBc@10Hz -130dBc@100Hz -148dBc@1kHz -156dBc@10kHz	-110dBc@100Hz -130dBc@1kHz -145dBc@10kHz
Aging				

Comparison between OCXO & TCXO

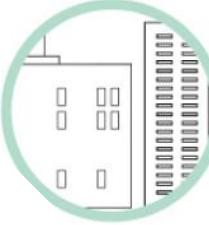

Frequency Offset (Hz)	1	10	100	1000	10000	100000	1000000
Large OCXO @ 10MHz	-106.7	-133	-157.5	-163.7	-166.6	-166.9	-165
Small size OCXO @ 20MHz	-75.7592	-122.274	-145.034	-156.982	-161.273	-161.811	-162.184
High End TCXO @ 20MHz		-95.8534	-119.05	-139.363	-153.705	-155.672	-156.253
Standard TCXO @ 26MHz			-110	-130	-145	-145	

Application

GNSS : TCXO, OCXO, Timing Module
- GPS / Beidou (BDS) / Galileo / GLONASS
QZSS / IRNSS
- LEO/MEO/GEO
- Positioning and Tracking

Data Center : X'TAL, XO, TCXO
- Server
- Switch
- Storage
- PON

Networking : X'TAL, XO, TCXO
- Gateway
- AP / Router
- HUB
- AIoT

Automotive : X'TAL, XO, TCXO
- Mobile data center
- GNSS
- Infotainment
- EV charger
- ADAS
- Connected Car

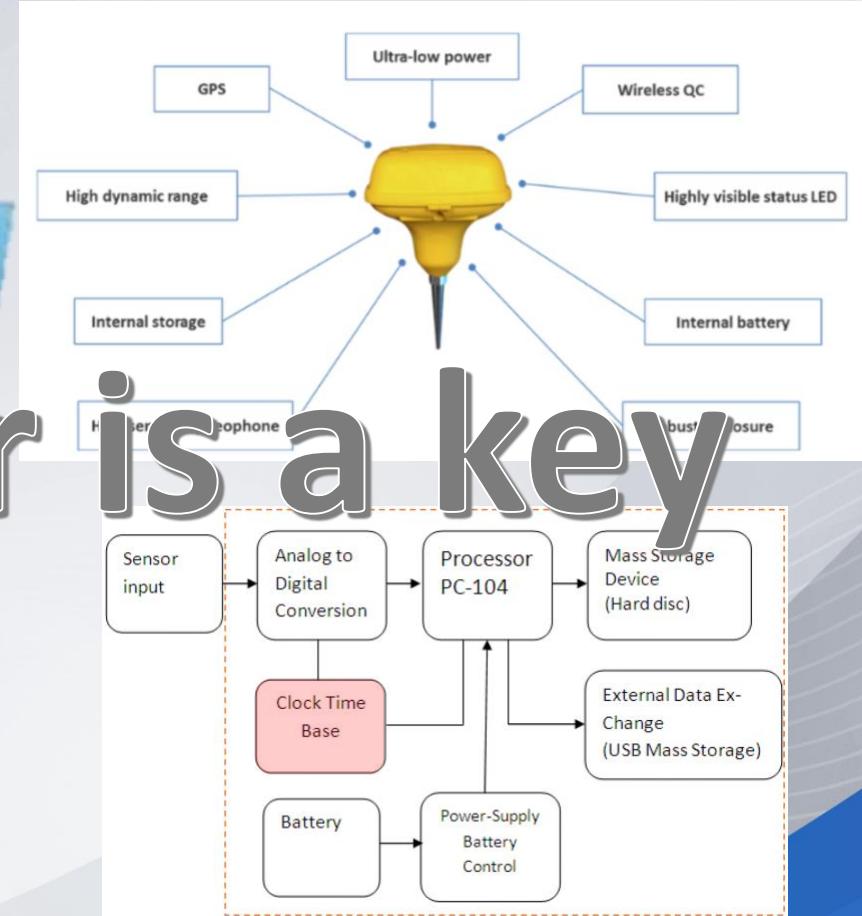

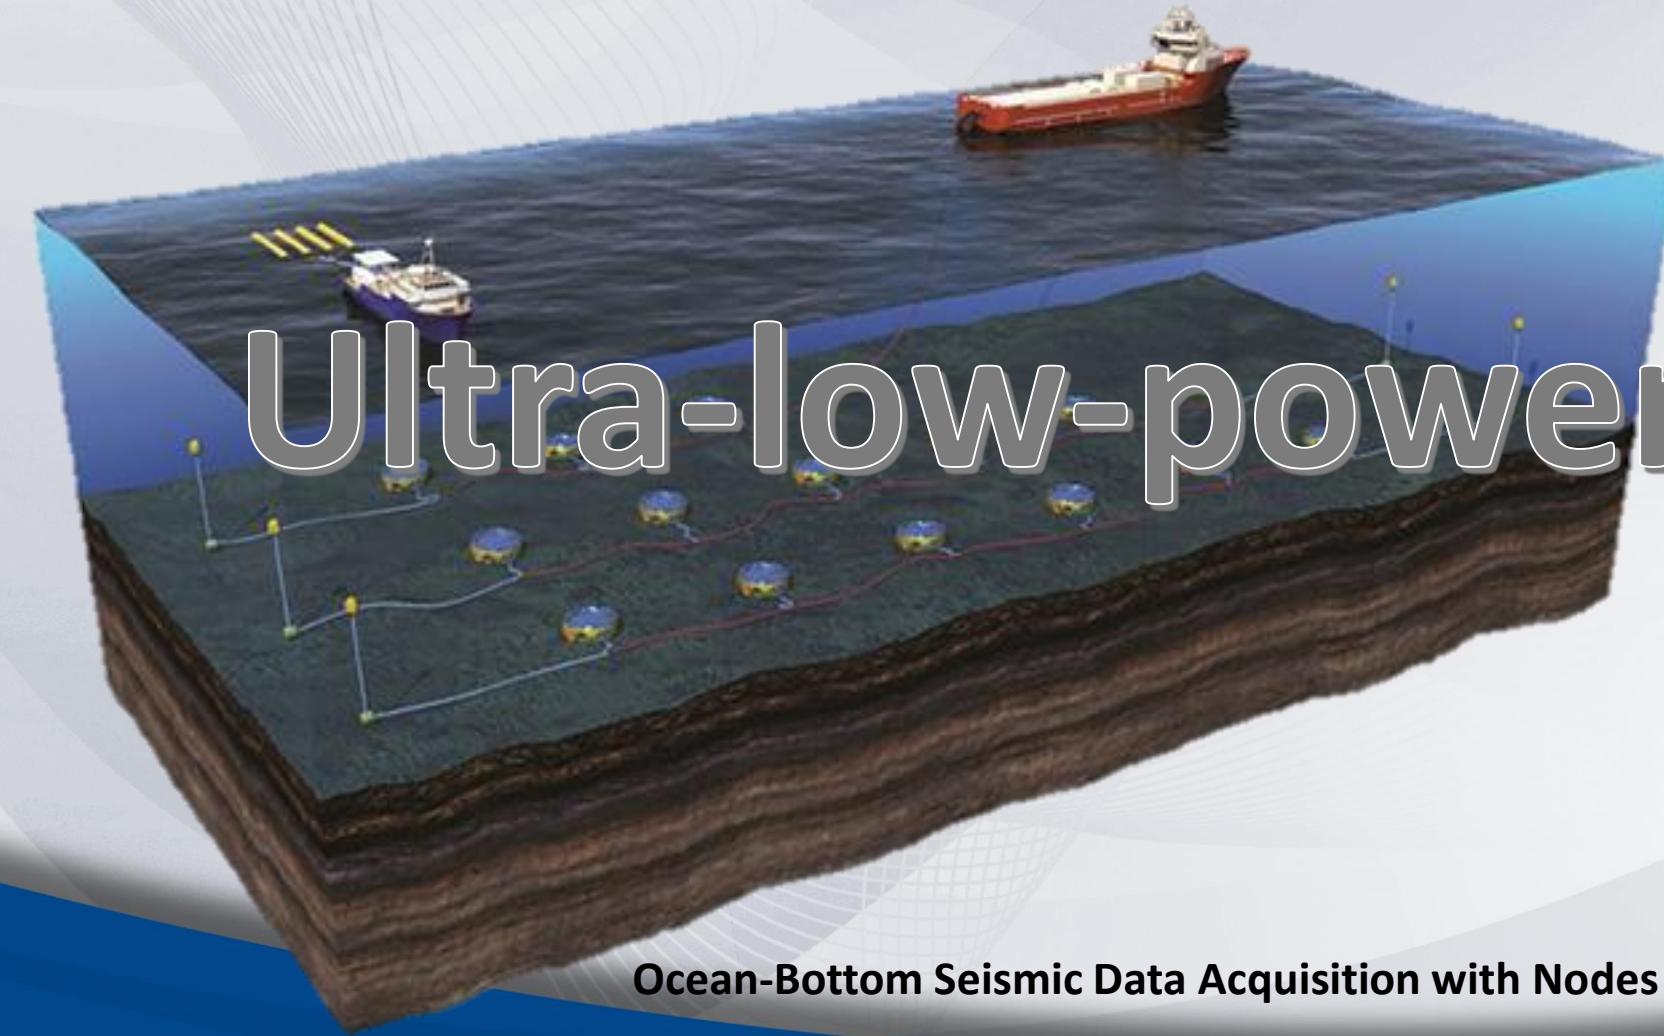

Consumer : X'TAL, XO
- Audio, Player, Speaker,
Microphone, Web Camera, CCD
- Video, Display & TV(FPD/FTF LCD)
- Notebook
- DESKTOP
- All in One
- IPC
- Printer

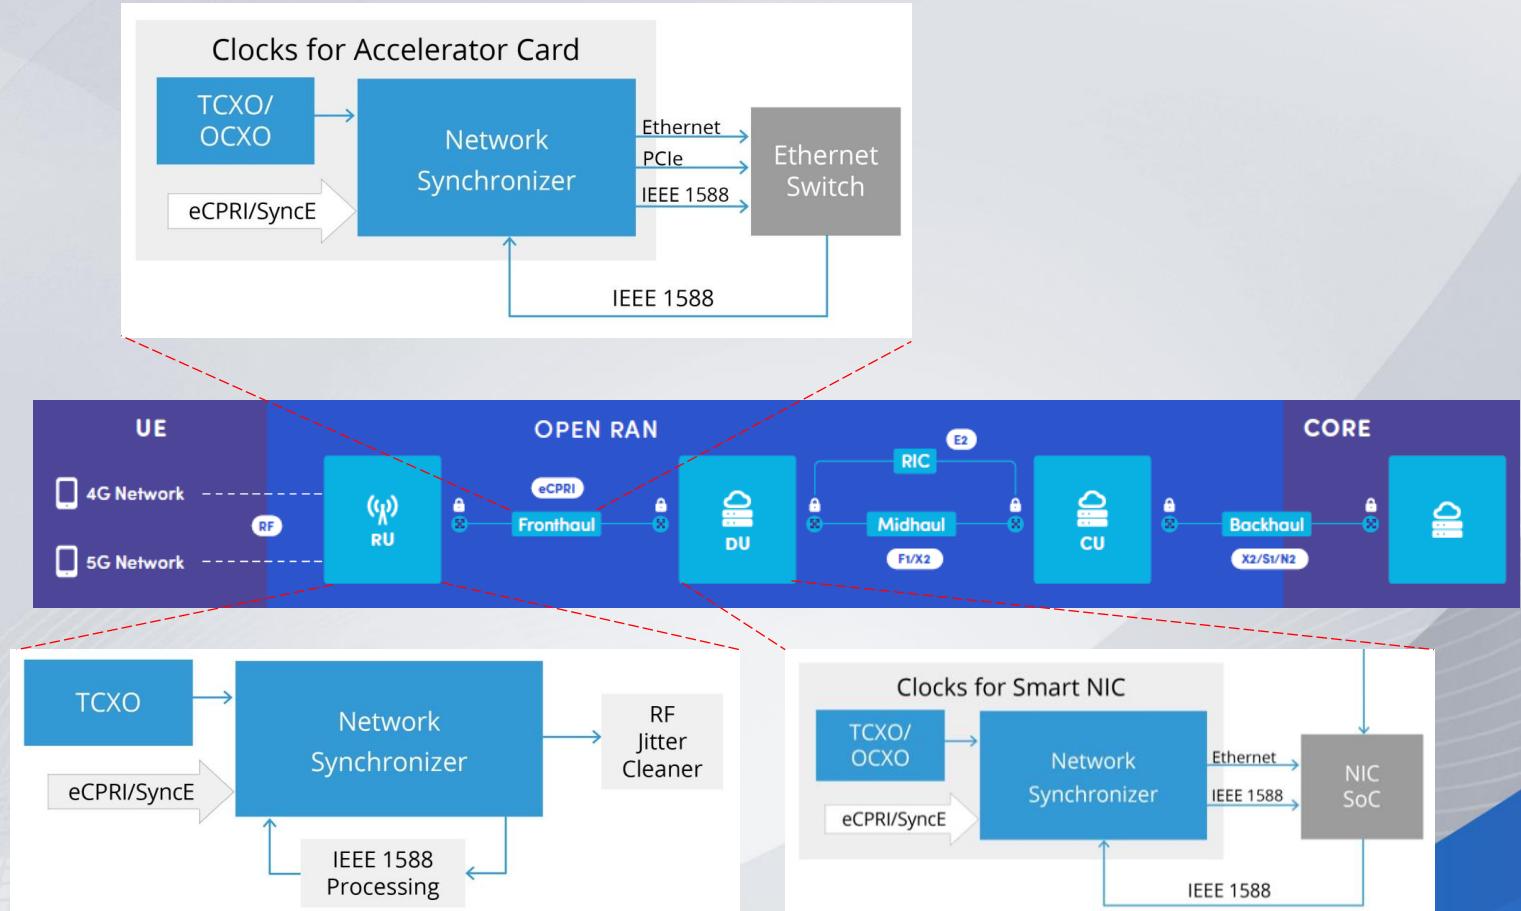

Telecom : X'TAL, XO, TCXO, OCXO, Timing Module
- CPE, Small cell
- RU / DU / CU
- Front haul machine
- Back haul machine

Seismic

Basestation (ORAN)

Automotive

Affiliate Brands

As an industry leader in frequency control products, we are pleased to announce the joining of Cardinal Components and Isotemp Research to its brand families.

Specialized in programmable products, Cardinal Components excelled in offering versatile frequency product solutions with fast deliveries. Cardinal offers both pre-programmed products and programming blanks and devices for those customers that require the utmost flexibility.

<https://www.cardinalxtal.com/>

Founded in 1968, Isotemp Research specialized in customized, high quality frequency control products for the communication and test equipment industries. Main product lines include Oven Controlled Crystal Oscillators (OCXOs), Temperature Compensated Crystal Oscillators (TCXOs), and Miniature Heater for Quartz Resonators (Mini-Ovens).
