## Introduction to the Tool

The Craftsman Hand Plane Type Study represents data from over 52 Sears, Roebuck & Co. catalogs, direct observation data, and user shared data. The purpose of this document is to provide Craftsman hand plane enthusiasts a means to determine what catalog era their Craftsman hand plane was available. As with all tool type studies, the common practice for manufacturers to use old stock on newer tools, intermix parts from different eras, make unpublished changes, and for users to replace parts in the field make placement of any individual tool in the chart a challenge. With 3<sup>rd</sup> party manufactured tools sold by Sears, Roebuck & Co., the challenges also extend to dealing with hand planes from multiple manufactures. For some enthusiasts, trying to learn about the manufacturer, the probable era the tool was sold, and the other similar models of their plane is part of the fun of collecting and using this historic tools.

This is on ongoing process that will improve in accuracy as enthusiasts provide input on errors discovered in the existing data, planes that do not fit the data, and provide better illustration of the identifying features of their hand planes for inclusion in the study. Ultimately, it would be helpful if the existing catalog illustrations were replaced with user provided photographs depicting important details such as, cutter trademark stamps, lever caps photographs displaying the actual color of the different versions, cheek markings, plane be colors, etc.

Through this process, it may be possible to determine the model number of an unmarked Craftsman hand plane, the manufacturer and features. In some cases, this is particularly easy as the model number is stamped into the cutter or on the cheek of the plane. For others, it can require learning about identifying the various types of Sargent & Company, Millers Falls Tools, or Stanley planes over the years.

I hope you find this valuable, useful, and a fun research tool to help you better understand your antique Craftsman hand plane. Please provide your input, corrections, challenges and photographs to Craftsman.Planes@gmail.com for possible inclusion in the type study for others to use.

## **Using the Craftsman Hand Plane Type Study Spreadsheet**

Determine the probably manufacture of your hand plane. For planes with an inverted "U" shaped lateral lever, it is likely Sargent & Company or Stanley. To differentiate between these two, the Stanley planes are more recent models, and should all have a manufactures OEM code of 187.XXXXX on the cutter. Newer Sargent planes will have 619.XXXXXX or "BL" on the cutter. If there is no OEM code on the plane with the inverted "U" lateral lever, it is a pre-1937 Sargent & Company.

If your plane has a left hand bent lateral lever, it is a Millers Falls Tools manufactured plane. Around 1936, Millers Falls began including a cheek stamp on the plane. From 1929-1935 the Millers Falls planes did not have a manufacturers OEM code on the cutter. Around 1936, "BB" was stamped on the cutter and in some cases the cheek of Millers Falls plane sold under Sears in-house brand names. Later Millers Falls plane may also have a manufacturers OEM code 107.XXXXXX on the cutter.

Keep in mind a well-used plane may have a replacement cutter that is not inline with manufacturer or the era of the plane body.

Now that you have an idea who manufactured your plane you can also narrow down the era as follows:

1928-1935 planes will not have OEM codes on the cutters or bodies.

1936-1950ish planes may have "BL" or "BB" OEM on the cutter or body

1950ish and newer planes may have a 3-digit OEM code on the cutter or body. 619 for Sargent, 107 for Millers Falls, and 187 for Stanley.

Now you can refer to the Craftsman Hand Plane Type Study spreadsheet to further narrow down the era your plane was advertised by Sears, Roebuck & Co. by comparing the features listed in your era and manufacturer to what you observe on your plane. Keep in mind, here is where a manufacturer may have used old parts on a newer plane. Compare all the features, particularly to the various known model types produced by Sargent, Millers Falls, and Stanley over the decades. You will have to refer to type studies for these manufacturers if you are not familiar with the various types they made. Some good sources are:

https://aplanelife.us/useful-links

As you work through the spreadsheet, don't get frustrated! You can contact me at Craftsman.Planes@gmail.com, or post questions to the many Facebook hand plane groups for help with your plane. You may well have found an error in the data, a unique Craftsman plane, or one sporting many replacement parts from decades of use.

Most important, have fun hunting the history of your plane!
