New Electricity in the stalls – each stalls has an outlet box along the top of the stalls – to keep horses from playing with things – there is a metal channel along top of stall with wire in it

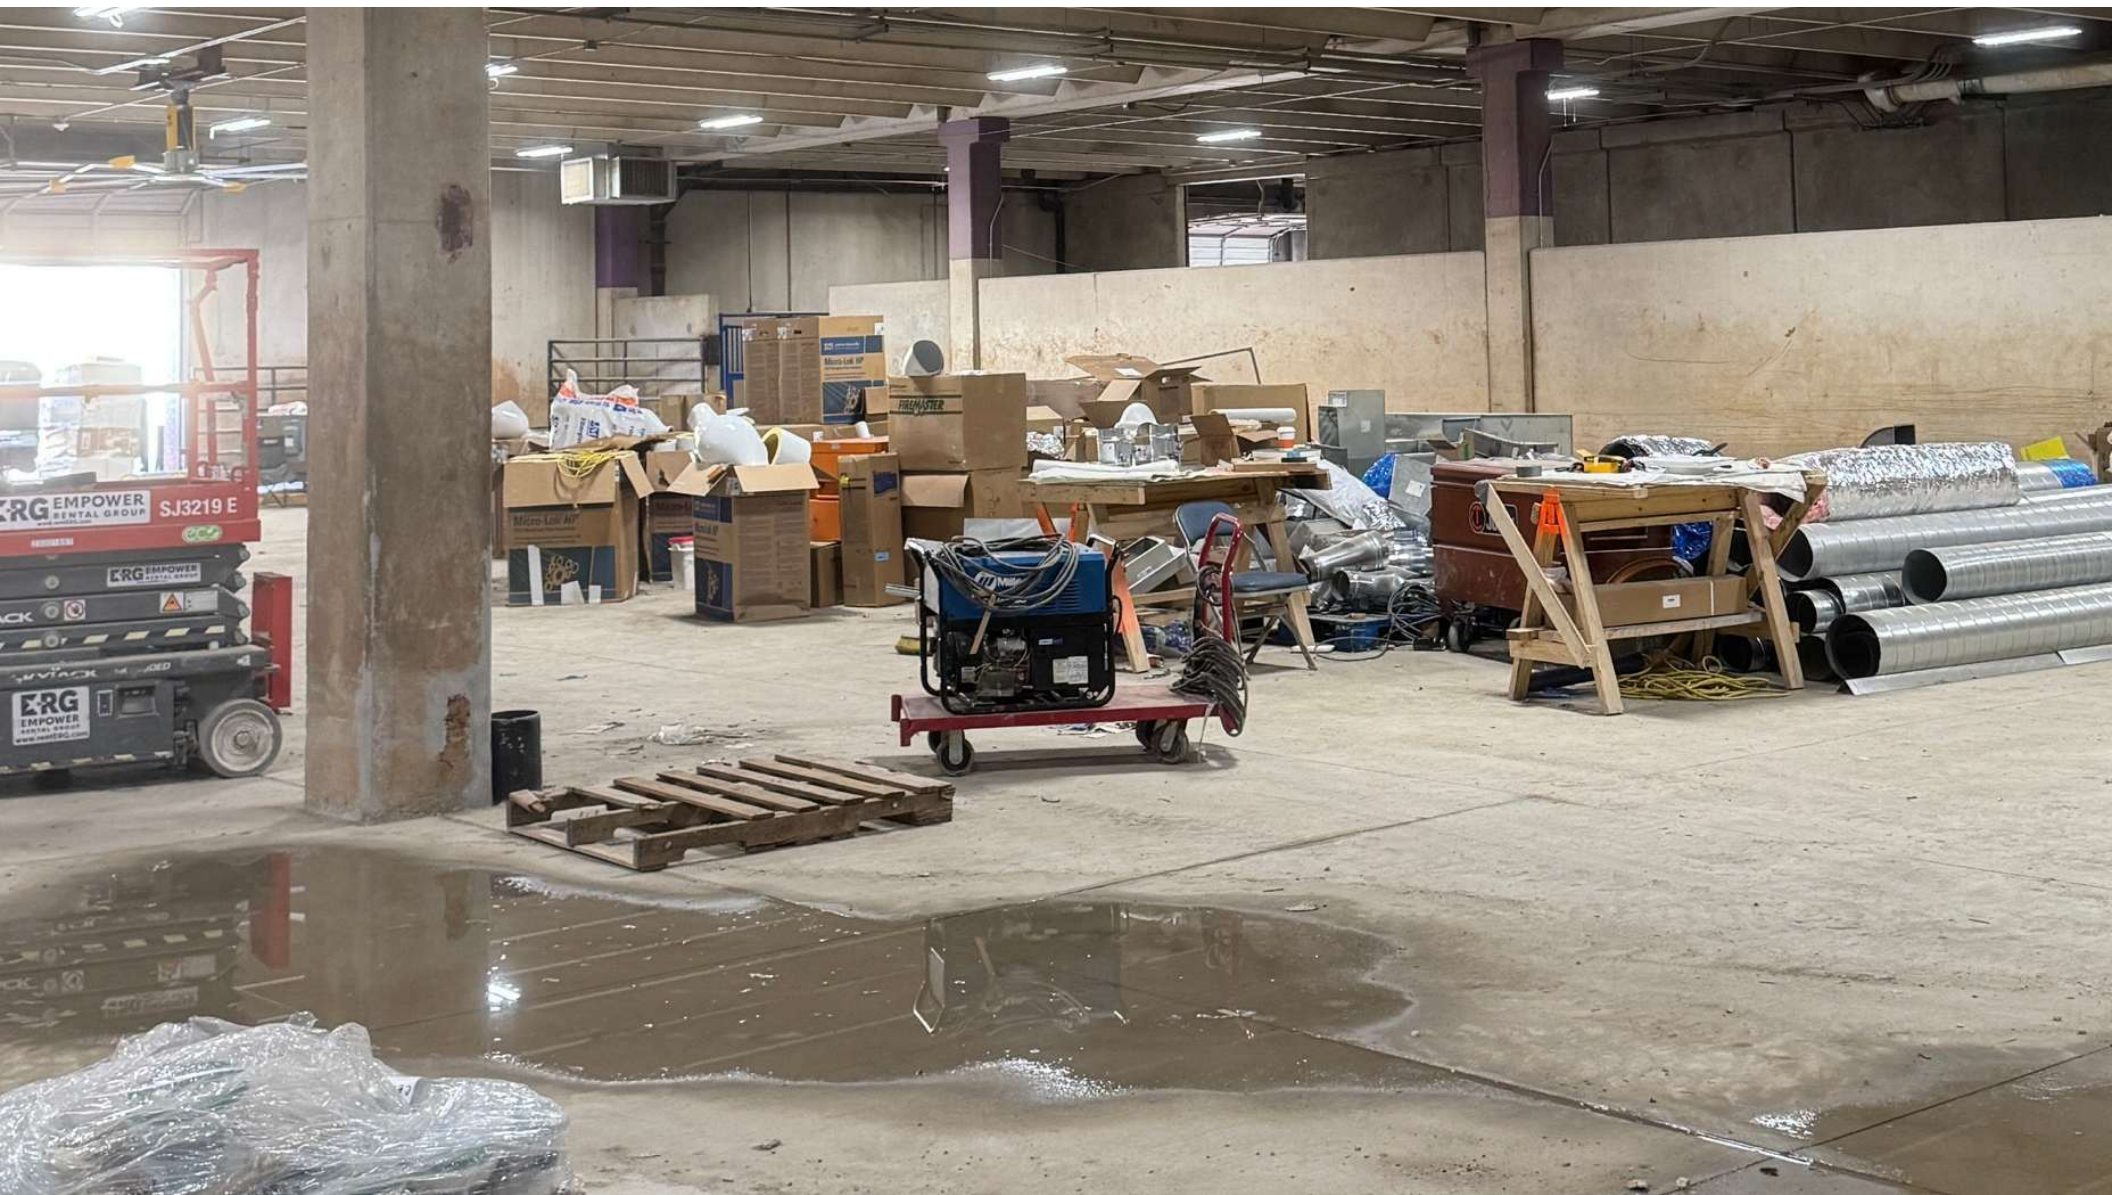

Top right corner will be only spot for mouthy horses to get ahold of the electricity and play with it. Not sure if there is a good way to protect this other than maybe have some cable ties and tie it down so they cant get ahold of it.

Vet Clinic is still there and is also getting a face list
