Decisions / Done / Differently.

WorkINT

Intelligence Requirements Management & Workflow Tracking

WorkINT, D3i's patent-pending solution, enables Intelligence Teams to discover unique insight, utility, and value from information sources by:

- **Identifying what's important (requirements and decisions).**
- **Enhancing what's best (process and engagement).**
- **Refining what's valuable (metrics and relationships).**

WorkINT's Versatile Design Is Best Applied If:

- The value of intelligence and decision support is inconsistently or inaccurately measured.
- Vendor/Information source value cannot easily be realized, measured, or communicated.
- Vendors/Information sources dictate what threats, information, and research are important to Intelligence Teams instead of vice versa.
- Your company makes seemingly subjective or uninformed decisions, yet the Intelligence Team's primary mission is to support decision-making.
- Your Intelligence Team struggles to know and communicate what intelligence topics/areas matter most and why.
- Your Intelligence Team wants to enable its leadership and stakeholders to work with more efficiency, alignment, accountability, and predictability.

Why WorkINT?

WorkINT is simple, intuitive, and methodical.

WorkINT is founded in traditional Intelligence Community principles

WorkINT is designed for practical application in corporate environments and cyber exercises.

WorkINT offers a scalable, flexible, and secure SaaS deployment.

WorkINT can enhance your decision-making process after its first use.

Your Security Matters

Every effort has been made to made the workINT platform as secure as possible including the use of encryption wherever necessary and the selection of the AWS suite itself. An on-premise solution is also available.

WorkINT Gets An "A"

Qualys SSL Labs gives WorkINT an "A" rating. In addition to implementing security best practices, SiteLock provides WorkINT with active malware and vulnerability scanning.
