

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

MONITORING REQUIREMENTS NOT MET FOR LAMONT WATER SYSTEM PWS ID # 1330754

Our water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we did to correct the situation.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During February 2025, our water system failed to collect total coliform samples as required and therefore cannot be sure of the quality of your drinking water during that time.

Total coliform bacteria are generally not harmful themselves. *Coliforms are bacteria which are naturally present in the environment and are used as an indicator that other, potentially harmful bacteria may be present.*

What should I do?

There is nothing you need to do. You may continue to drink the water.

No adverse health effects are believed to have resulted from this failure to collect the required total coliform samples.

What is being done?

We have since collected the required monthly samples for March 2025. None of the samples tested positive for total coliform bacteria. This matter is now considered resolved.
