

RED BAG MINIMIZATION and RECYCLING PROGRAM

The Next Step in Healthcare Recycling

Conigliaro Industries provides Total Recycling Services to Healthcare and Biotechnology facilities. Currently serving over 50 hospitals and biotechs, Conigliaro Industries has established itself as the industry leader for healthcare recycling.

While Conigliaro Industries recycles standard materials such as plastic, corrugated, paper, metal and glass, we offer a special program to Minimize Red Bag Wastes.

The RED BAG MINIMIZATION and RECYCLING PROGRAM benefits institutions in 3 ways:

- 1 Saves on Red Bag Disposal Costs
- 2 Increases Recycling, Helping Meet Your Environmental Goals
- 3 Insures Compliance with Recycling Rules and Regulations and Joint Commission Goals and Mandates

Red bag minimization is accomplished using a combination of thorough in-service training, strategically placed bins and common sense. By targeting easy to collect mixed plastics in Patient Care Areas, Operating Rooms and Pre-Operating Preparation Rooms, Red Bag wastes can be reduced significantly. We accept all of the following plastics, plus more:

- PETE #1 Blister Packaging
- HDPE #2 Bottles and Wraps
- PVC #3 Intravenous Bags and Patient ID Cards
- LDPE #4 Poly Bags and Wraps
- PP #5 Sterile Wraps and Irrigation Bottles
- PS #6 Instrument Trays

Conigliaro Industries' professional sales staff will design a RED BAG MINIMIZATION AND RECYCLING PROGRAM tailored to your institution. All of our programs are geared towards simplicity, saving money and helping the environment. Truly a win, win, win!
