

Recycle to the Beat of a Different Drummer!

Does your company have a problem with drums? Most do. Manufacturers across New England are producing more and more drums as the trend towards purchasing bulk ingredients continues.

Conigliaro Industries, provider of Total Recycling Services, may be able to help. We remove and recycle all types of triple rinsed plastic, metal and fiber drums and crates. We will remove, destroy and recycle your drums and we will be less expensive than the rubbish man - guaranteed.

We will track your drums during all phases of the recycling process. Your drums will be handled in a safe and proper fashion, protecting your firm from future liability.

Best of all, your drums will be recycled into such products as manhole covers, new drums, new pallets and new plastic products. You'll save money & help the environment. Truly a win, win!

For more information, or to receive a free quotation for drum recycling services, please call our sales department:
