

JOSEPH J. ZILBER School of **Public Health**

Rigorous and interdisciplinary research and scholarship. Educating the current and future public health workforce. Creating strategies and policies that will help us live longer, healthier lives. At the Joseph J. Zilber School of Public Health, we're training the next generation of leaders who will transform the health and health care landscape in Wisconsin and beyond.

Zilber School of Public Health students with Dean Magda Peck.

Academic Programs

UWM's Joseph J. Zilber School of Public Health now offers a Master of Public Health (MPH) with tracks in Environmental and Occupational Health, and Community and Behavioral Health Promotion; a PhD in Public Health—Community and Behavioral Health Promotion; a PhD in Environmental and Occupational Health; and a Graduate Certificate in Public Health. Future programs will include PhDs in Epidemiology and Public Health Policy and Administration and MPH tracks in Biostatistics, Epidemiology, and Public Health Policy and Administration. The Zilber School of Public Health is working to become the first nationally accredited school of public health in Wisconsin.

A world-class School of Public Health is just one of many things that UWM has to offer:

- 181 degrees and programs
- 1,600 faculty and instructors
- Nearly 30,000 students
- \$60 million+ in annual research expenditures
- 96% satisfaction rate among recent grads

- built environment • sex education
- recycling • aging well • preventing injuries • reducing stress
- financial literacy

Your Health

Your health is your most precious resource. And everyone, everywhere, regardless of age, ethnicity, income or ZIP code, should have an equal opportunity to protect and improve that resource. Public health professionals work to better the lives of all, especially our most fragile citizens, from tiny babies to the elderly — and everyone in between.

Our Health

Good health doesn't stop at home. It's a part of our schools, our workplaces and everywhere we gather as a community. It's the air we breathe and the water we drink. Whether it's controlling infectious disease or reducing environmental hazards, the public health field touches every aspect of our lives.

"UWM has an extraordinary opportunity to shape the future of public health education and research,"
says Magda Peck, founding dean of UWM's Joseph J. Zilber School of Public Health.

Public Health creates conditions for people to stay fit and active.

- healthy school lunches • strong families • local foods
- elder care • neighborhood watch • **innovative research** • science of prevention • diversity
- safe streets • lung health • better medicines • water testing • eliminating disease • safe public transportation
- drinking responsibly • natural disaster relief • employment resources • active teenagers
- full-term babies • fresh air
- living longer • safe drinking water • well-lit sidewalks
- daily exercise • clean parks
- emergency response

Michael Laiosa, Professor of Environmental & Occupational Health.

Public Health

There's never been a more important time to invest in public health. Magda Peck, the founding dean of the Joseph J. Zilber School of Public Health, notes we're living in the first generation where it's likely that our children might not live as long as we have because of the devastating effects of obesity and chronic disease. But in a city plagued by higher-than-average teen pregnancy, infant mortality, binge drinking, sexually transmitted infections and other problems, the Zilber School of Public Health is poised to make a major impact. How? With new state-of-the-art facilities, nationally renowned faculty conducting critical research, and powerful partnerships with the Milwaukee Health Department, the UWM School of Freshwater Sciences and others. By working together, we believe we can make Milwaukee and surrounding communities the healthiest places in the nation.

publichealth.uwm.edu

Our students are in demand: More than 50 percent of Wisconsin's public health workforce is expected to retire in the next few years.

- public health policy • reducing obesity
- cancer prevention • global impact
- workforce development • safe streets
- public signage • collaboration
- **access to healthy food** • long-term health planning • employee health and wellness • affordable health care • interdisciplinary research • poison prevention • building strong communities
