

MAVENEER

Chris Davis Joins Maveneer® as Managing Director, Built It

by Maveneer November 13, 2019

LEADERSHIP, NEW HIRE, NEWS

Atlanta, Georgia (November 13, 2019) – **Maveneer®** is excited to announce the addition of Christopher Davis as a key executive leader within our rapidly growing team at Maveneer. In his role as the Managing Director of our Build It team, Chris will lead our organization to implement the systems we design for our Clients. In doing so, he will develop and manage our relationships with automation and system suppliers, oversee purchasing and delivery of equipment, focus the team on quality and readiness, help our Clients overcome the change curve, and generally be responsible to “make it real”. Because we don’t just design an automation solution. We build a business solution – with a business case.

For over 25 years, Chris has specialized in warehouse automation and technology implementation, operations startup and turnaround, cost improvements, and service enhancements. His latest implementation was featured on the cover of *Modern Materials Handling* magazine, and he was named a 2018 “Pro To Know” by *Supply and Demand Chain Executive*. Prior to Maveneer, he held senior leadership roles at Fortna, Newell Rubbermaid, Honeywell International, and Acuity Brands – directing operations and systems for over 100 warehousing sites across North America and Europe.

“We pride ourselves not only in our ability to design great solutions to meet our Client’s needs, but also in our ability to turn that design into reality – that is, Build It. When we accept the accountability to turn our conceptual design into a reality, then that design earns even more credibility. Chris’ passion and experience building new things and bringing solutions to life will enable us to offer this reality to our Clients”, said Chad Hallerman, Founder and CEO at Maveneer.

About Maveneer

Maveneer is an engineering design firm that specializes in the design and implementation of distribution center and manufacturing operations, both new and retrofit. Our teams possess expertise in industrial process design and industrial automation. We also have the expertise and operations background to successfully implement our recommendations and identify and manage risk along the way, ensuring intended benefits are realized.

We design from a first-principles, “what’s the best possible solution” mindset, which results in innovative and cost advantaged operations for our Clients. Often, this means assembling standard methods or technologies in unique ways that provide distinct advantages.

‘Business case’ is integrated in everything we do.
