LETTER OF FULL DELEADING COMPLIANCE

Barbara Przybylska
Hemenet
PO Box 186
Belmont, MA 02478

Date: June 26, 2001

To Whom It May Concern:

This letter is to certify that I re-inspected your property located at **10 Governor Road**, and relevant common areas, in the City or Town of **Arlington, MA 02474**, for full deleading compliance on: **06/26/01**, and on that date those surfaces cited in the initial inspection report of **09/26/00** were found to be in full compliance with Massachusetts General Laws, Chapter 111, Section 197, and 105 CMR 460.000: Regulations for Lead Poisoning Prevention and Control. Dust samples were taken and found to be within acceptable limits.

Massachusetts's law does not require the abatement or containment of all residential lead paint. The residential premises or dwelling unit and relevant common areas shall remain in compliance only as long as there continues to be no peeling, chipping or flaking lead paint or other accessible leaded materials, as long as coverings and/or encapsulants forming an effective barrier over such paint or other leaded materials remain in place, and as long as surfaces reversed to correct lead hazards remain reversed and securely in place. The law grants you a 30-day maintenance period to repair deteriorated lead paint or detached coverings over such paint, and to clean up, during which time this Letter remains valid.

The reverse side of this letter indicates the authorized person(s) who performed deleading on the property and a general summary of the methods used. A complete reinspection report is attached to this letter, which specifies how and on what date each surface was brought into compliance. Do not lose these documents.

To the best of my knowledge, the cost of the legally required deleading is **\$22,000.00**

Sincerely,

Christopher Maracic M-2006
(Inspector) (DPH License #)

Inspection and Deleading History

Initial inspection done on: 09/26/00 by Ron Albert Lic. # R-1704

Reoccupancy reinspection, if needed, done on: ____ by ____ Lic. # ____

Final inspection done on: 06/26/01 by Christopher Maracic Lic#: M-2006

Deleading Contractor : Charles Kelley License #: DC#530

Deleading methods: Scraping Made Intact Replacement Covering

Work was done in the following rooms: Room 1,2, 3, 5, 6, 7, Bathroom, Kitchen, Hallway #1, #2, Staircase, Porch

Work was done on the following types of components : Walls, Baseboards, Door, door casing/jamb, Window sill, apron, casing, header, stops, sash, ext. sill part bead, blind stop, ext. sash; Closet walls, pole, shelf, support, baseboard, floor, ceiling; Upper cabinet frames, door, walls, shelves, supports, drawers; Newel post, Balusters, Risers, Stringer,

EXTERIOR: Siding, Upper trim, Door, door casing/jamb, Threshold, Kickplate, Newel post, Railing, cap, Balusters, Lower rail, Cellar window units, Siding, Window sill, casing, sash.

Start Date : 06/11/01

Finish Date : 06/26/01

Cost: \$22,000.00

EXPLANATION OF LEAD INSPECTION REPORT FORM COLUMNS

This document is intended to provide general information needed to understand the inspection report. However, you should always speak with the inspector if you have any questions before you delead your home.

SIDE	Refers to A,B,C, or D side of the building or room. See the diagram on the cover sheet. The "A" side of the building or room is the side facing the street which gives the property its address (usually, it is the front of the building). Keeping your back to this street, from the "A" side move clockwise to the "B" side on your left, the "C" side opposite you, and the "D" side to the right.
SURFACE	Refers to the building component(s) being tested. Generally, each separate component is considered one surface. Some surfaces may be made up of more than one part. For example, "Baseboard" may refer to four separate pieces of wood (one running along each wall), but is still considered one surface.
LEAD	The actual lead result. Each surface tested must have a result recorded in the "Lead" column. - A number shows that the surface was tested with an XRF analyzer. A number (or average number) more than 1.2 mg/cm² is a dangerous level of lead. - A "pos" or "neg" shows that the surface was tested with sodium sulfide. "Pos" means that there is a dangerous level of lead. "N/A" means that the inspector was not able to test the surface. Unless the owner can get a sample to test, the inspector must assume the surface contains lead and require it to be delead, if necessary. "Metal" means that a metal surface was not tested and only needs to be intact. If the surface is a metal handrail, metal window sill, or metal railing cap, it needs to be delead if it is more than 1.2 mg/cm², "pos," or is "N/A."
TYPE OF HAZARD	Not all lead paint must be delead. This column tells you IF and WHY a surface needs deleading. "M/I" circled means that the surface is a moveable/impacted surface and must be delead in its entirety. "A/M" circled means that the surface is "accessible mouthable" and must be delead to a minimum of five feet high, four inches in from the edge or corner. "L" circled means that the surface is loose and must, at minimum, be made intact. - If more than one choice is circled, the rules for deleading may change depending upon what method of deleading you choose. Speak to the inspector for more information. "N/A" means the inspector was unable to determine if the surface was loose or intact. The person doing the deleading must check this surface and follow all the rules for deleading. Speak to the inspector for more information. - If nothing is circled or marked "N/A" then it is likely the surface does not need deleading. Speak to the inspector for more information.
COMMENTS	Any additional observations or test results made by the inspector that affect the inspection or deleading.
DELEAD DATE	The date that the lead inspector checks the surface and finds that it has been successfully delead and passes reinspection.
DELEAD METHOD	The kind of deleading done to bring a surface into compliance. Refer to Deleading codes in the Key on the cover page of the inspection report.
MEASURE LOOSE PAINT (IN "EXCLUDED SURFACES" BOX)	The amount of loose paint on a surface as measured by the lead inspector. "N/A" means that the inspector was not able to measure the loose paint, but has determined that it is more than the cut-off. Surfaces listed here, whether with a measurement or with an "N/A" notation, can only be made intact by a licensed deleader. Note that there are still other low and moderate-risk deleading activities that may be done by someone who is not a licensed deleader.
