Reference: Park Water Shut Off and Pool Closure

Dear Residents,

On Sunday, a water faucet in the storage area was hit causing a water leak. The owner called the caretaker and it was reported. A plumber was called, came out and looked at it. He temporarily was able to stop the leak but has to come back on Wednesday, October 29<sup>th</sup> to fix it properly. This means the water within the entire park will need to be shut off from approximately 8:30 am until about 2:00pm. You will need to plan accordingly with extra water on hand to flush toilets and for anything else you may use water for.

The pool has a chemical imbalance due to a faulty dispenser. The pool tech is unable to get up here to look at it right now – so the pool is CLOSED for the winter as of now.
