# Vision Statement

## THE IMAGINE 7th generation Initiative

For the welfare of the whole people, look and listen to the ancients – who have always viewed not only the present – but also the coming of the seventh generation.

For those whose faces are yet beneath the surface of the ground, and also the unborn of the future nation.

## The Seventh - Generation Principle

The Seventh-Generation principle is a concept that urges the current generation of humans to live and work for the benefit of the seventh generation into the future. It is believed to have originated with the Iroquois – Great Law of the Iroquois – which holds appropriate to think seven generations ahead and decide whether the decisions they make today would benefit their descendants. It is frequently associated with the modern, popular concept of environmental stewardship or 'sustainability' but it is much broader in context.

Oren Lyons, Chief of the Onondaga Nation, writes:

“We are looking ahead, as is one of the first mandates given us as chiefs, to make sure and to make every decision that we make relate to the welfare and well-being of the seventh generation to come...what about the seventh generation? Where are you taking them? What will they have?”

THE **IMAGINE**

## Green Architecture

Bringing sustainability to EARTH'S living environments

**GREEN** Life **EMERGING**

from the Darkness of  
Historical Ecological Trauma

- The proposed Imagine Village is a fully elevated platform 30' above grade with a New Urbanism Village nestled along the Detroit River.
- The buildings are LEED Platinum AIA designed, engineered and constructed with a net zero carbon footprint.
- The sustainability theme is for land underneath to be open with vertical light shafts and the building becoming a living vertical forest, plus roof tops composed of agricultural gardens and greenhouses.

## AT THE BASE OF THE NEW GORDIE HOWE BRIDGE:

Imagine a New Urban Village honoring the past, present and future healing from an oil-based economy of wars and massive damage to the environment.

A group of individuals who have a very heavy heart for the people of Detroit asked us to evaluate properties for best use in their community near the new Gordie Howe Bridge. Our analysis discovered the location has a deep history which could provide many dynamic opportunities yielding exceptional returns of:

- triple net profit,
- social equity,
- environmental benefits,
- historical trauma healing of people, ecology, and from an oil carbon-based economy to a sustainable green economy.

The proposed property's use is based on a New Urbanism Model and the vision of the eloquent Seventh Generation of Consciousness of the Iroquois – a moral method so practically appealingly and smart the desire to participate seems irresistible.

Our question is do we have the guts to implement “7<sup>th</sup> generation” for our children, future generations and our environment?

# “Here Lies”

The history of Fort Wayne and the Treaty purchase of Indigenous land for peace and ceded for protection. Within two years, the Treaty was broken by the US Government.

In early autumn of 1809, 1,379 Potawatomi, Delaware, Miami, and Eel River tribal members and their allies gathered to witness the signing of the Treaty of Fort Wayne. On September 30, twenty-four “Sachems, Head men, and Warriors” put their X next to their names. William Henry Harrison, governor of the Territory of Indiana, led a U.S. delegation of 14 representatives. The agreement called for the four tribes to cede 2.5 million acres of their lands in present-day Michigan, Indiana, Illinois, and Ohio in exchange for what amounted to 2 cents an acre. Within two years, Governor Harrison let an attack on Prophetstown, the camp of Tenskwatawa and his followers on the Tippecanoe River. The battle at Tippecanoe set off a new war. This is known as the Treaty that led to war.

The Gordie Howe Bridge is the Genesis of The Imagine Initiative

The Gordie Howe Bridge Under Construction

# Why here, at the Gordie Howe Bridge and on Zug Island – to cure, heal and advance?

Because “Here lies” one of the largest native burial mounds in North America destroyed by the advent of industrialization – signifying the end of a natural way of sustainable life.

Today, the oil economy’s way of life is being challenged by a native ancestral philosophy – an undeniable and eloquent consciousness as powerful as Einstein’s theory  $E=MC^2$ .

## THE IMAGINE 7<sup>th</sup> generation Initiative

**A tool for managing Historical Trauma and holding the intelligence and power to correct the damage – promoting healing and a sustainable solution for generations to come!**

If we don't  
make good  
decisions,  
others may  
make them for  
us without  
consideration  
of Historical  
Trauma &  
Environmental  
Sustainability

Rick Handley

## What is Historical Trauma?

The accumulative emotional and psychological pain over an individual's lifespan and across generations as the result of massive group trauma, such as racial discrimination, slavery genocide and ecocide. Historical trauma can have varied effects on individuals and populations, including depression, high mortality, alcohol abuse, child abuse and domestic violence. Examples of historical trauma have been observed and extensively researched among Lakota and other American Indian populations, and Jewish Holocaust survivors and descendants (Maria Brave Heart, 2000).

Professional research psychologist have determined that healing requires reconnecting people to the vibrant strengths of their ancestry and culture, helping people process the grief of past traumas, and creating new historical narratives to promote healing and environmental improvement.

The writer has added ecocide as a massive cause of historical trauma causing oil wars, climate change, and mass extinction of other forms of life. The Industrial Revolution's thirst for carbon-based energy has caused extensive pain and suffering of many populations in elevating weather intensifications and severe drought, not to mention the depravation of the planet's ecology.

Healing also requires education of the common threads and factors underlying historical trauma for all humanity – leading with good decisions derived from good information, and the moral creed of the Iroquois Seventh Generation Consciousness is our best decision - making philosophy.

**“Here Lies” The leveled woodland burial mound on Zug Island**

**Once an 800’ length x 400’ wide x 40’ high mound which was crushed and used as gravel for roads and foundations for the construction of the Ford Rouge River Complex.**

# At the Gordie Howe Bridge, Here lies...

“Here lies the place where...”

- Mankind created the assembly line building combustion engines, at one of the largest carbon-based industrial complexes in the world:
  - Where ecocide rendered the land unsuitable for life. Certainly, increasing human mobility, but consequently emitting excessive carbon and poisons into the air, water and land and massive ecological damage all within a 120-year period of industrialization.
  - Where the automobile was developed, averaging 3-4 tons, used to often cart a single individual around with multiple environmental cost. A mechanization which has led us to an oil - based economy, mass extinction of many forms of life, vast highways , huge material resourcing and deplorable waste outcomes
  - Where the oil economy has manifested into a paradigm of which we live and rationalize as a successful reality
- **Here lies** , Nuclear rods were enriched for the Manhattan Project during WW2, of which resulted as a tool for incredible genocidal annihilation, and of which still leaks radiation into the Detroit River.
- **Here lies**, a historical escape route, known as the Under Ground Railroad, where 30,000 humans fled from slavery, lynchings and genocide – of which untold millions died in slave boats (thought to have been as high as 50% of enslaved died on the slave ships).
- People can learn about the significance and impact of Historical Trauma: root causes, methods for healing, and advancement in developing a green economy. Healing the environment, the people and life on the planet.

Can you imagine a conscious way of life with 7<sup>th</sup> generation measuring every year our improvement to a real green economy?

## Zug Island:

A site operated as a steel plant and experienced unprecedented Historical Trauma to the land, water and air eventually becoming uninhabitable for sustainable life.

Zug Island is the site of the Late Woodland Era Burial Mounds

- Approx. 19 Woodland Indian burial mounds were originally present at the mouth of the Rouge River.
- Some mounds continue to be visited by local Native Americans and are considered sacred.
- The largest was 800 ft by 400 ft by 40 ft high and is currently a contaminated environmental brownfield.
- The burial site was crushed and used as gravel and sand for Ford's Rouge River Industrial Complex.
- The Rouge River is an environmental pariah as the river burst into flames from toxic chemicals and oil.
- The river became a major polluter to the Detroit River and Lake Erie, consequently, recognized as an ecocidal event.
- Ford Motor has since significantly cleaned up the Rouge River with \$50M of environmental restoration, and more to go.

As of Today, the burial grounds have yet to be restored, and the waters have not been fully cleaned up.

<https://windsorstar.com/news/local-news/scientists-warn-of-urgency-in-cleaning-up-detroit-river-toxic-sediment>

**“Here Lies” Ford Motor River Rouge Complex**

**On this site, Henry Ford built a 4-square mile automobile industrial complex without environmental considerations. Hence, the pollution of lead, methyl ethyl, PCB’s, arsenic, cyanide and heavy metals ran down the Detroit River to Lake Erie of the Great Lakes. This contributed to an ecocide of many species – a tipping point where the Lake was rendered dead at one time.**

“Here Lies” The History of the Under Ground Railroad ... all roads lead to Detroit

Enslaved people suffered for 400 years. 30,000 found their way to freedom in crossing the short distance of the Detroit River to Canada. This passage was known as the Underground Railroad, supported by highly ethical people who refused to accept slavery.

# The Real Cost of Historical Trauma

- Historical trauma has always been the next page to generational trauma – which repeats and leads to war. The Civil War, WWI, WW2 (Holocaust), every other war – including terrorism – repeats itself over and over again. The cost of conflict to the planet and human lives is unfathomable and incapable of being fully understood or even rationalized.
- Civil Rights and Hate Crime Laws are certainly meant to curb the genocidal tendencies of mankind but unfortunately, there has not been enough preventative education to curb the abuse cycle.
- Narcissistic behavior, personality disorders, and criminal behavior are defined often as “owing” to Historical Trauma – identified as caused by parental abuse during the child’s early development. The cost of preventative education and treatments are minimal when compared to the cost of long term affects manifesting into Historical Trauma, possibly leading to next generation annihilation of lives and destruction of environment.
- Child abuse, domestic abuse, alcohol and drug abuse, racism, sexual slavery and political polarization are often the unintended consequence of Historical Trauma.
- The preventative educational tools to manage Historical Trauma are very challenging to employ on a macro level because of the multitude of races, cultures, religions, social economic factors, education and personal interest all create differing realities. However, the differing lenses of reality align when pain and suffering of a war or incarceration for a crime often always exceeds the cost of a good dose of preventative education.
- In many minds the best solution lies in the eloquent vision of the Iroquois Seventh Generation Consciencness and a need for a paradigm shift of our way of life of which everyone can understand and live by.
- This will require extraordinary tools of intelligence and wise people to make good decisions derived from good information.

“Here Lies”  
The  
opportunity of  
The **Imagine**  
7<sup>th</sup> generation  
Initiative in  
your life

Imagine...  
we can  
survive  
ourselves!

The Imagine Initiative Village embodies The Seventh Generation Consciousness – a resilient positive message – and will be the right place to end a short-term way of life within.

The Imagine Initiative Mission Statement

## Zero-Sum Sustainable Village of Healing and Economic Change

The Imagine Initiative is a place

- To learn about Historical Trauma and to heal by understanding the root causes and affects of mankind's traits to competitively spread their genetic pool to dominate and abuse others, as well as abuse the environment.
- To identify and heal from manifestations of abusive trauma – sexual, alcohol, drugs, child abuse, personality disorders, post traumatic stress, suicide, homicide, racism, war, genocide and ecocide.
- To learn how to share the same environment with others – breaking the cycle of Historical Trauma – laying the foundation for healthy, sustainable environment for future generations.

# The Turnaround is Emerging

Ford Motor is listening and committing to the new paradigm of long-term sustainability. It has revitalized the former Detroit Train Station – the new home of Ford Headquarters future mobility hub – the beginning of the Electric Vehicle revolution.

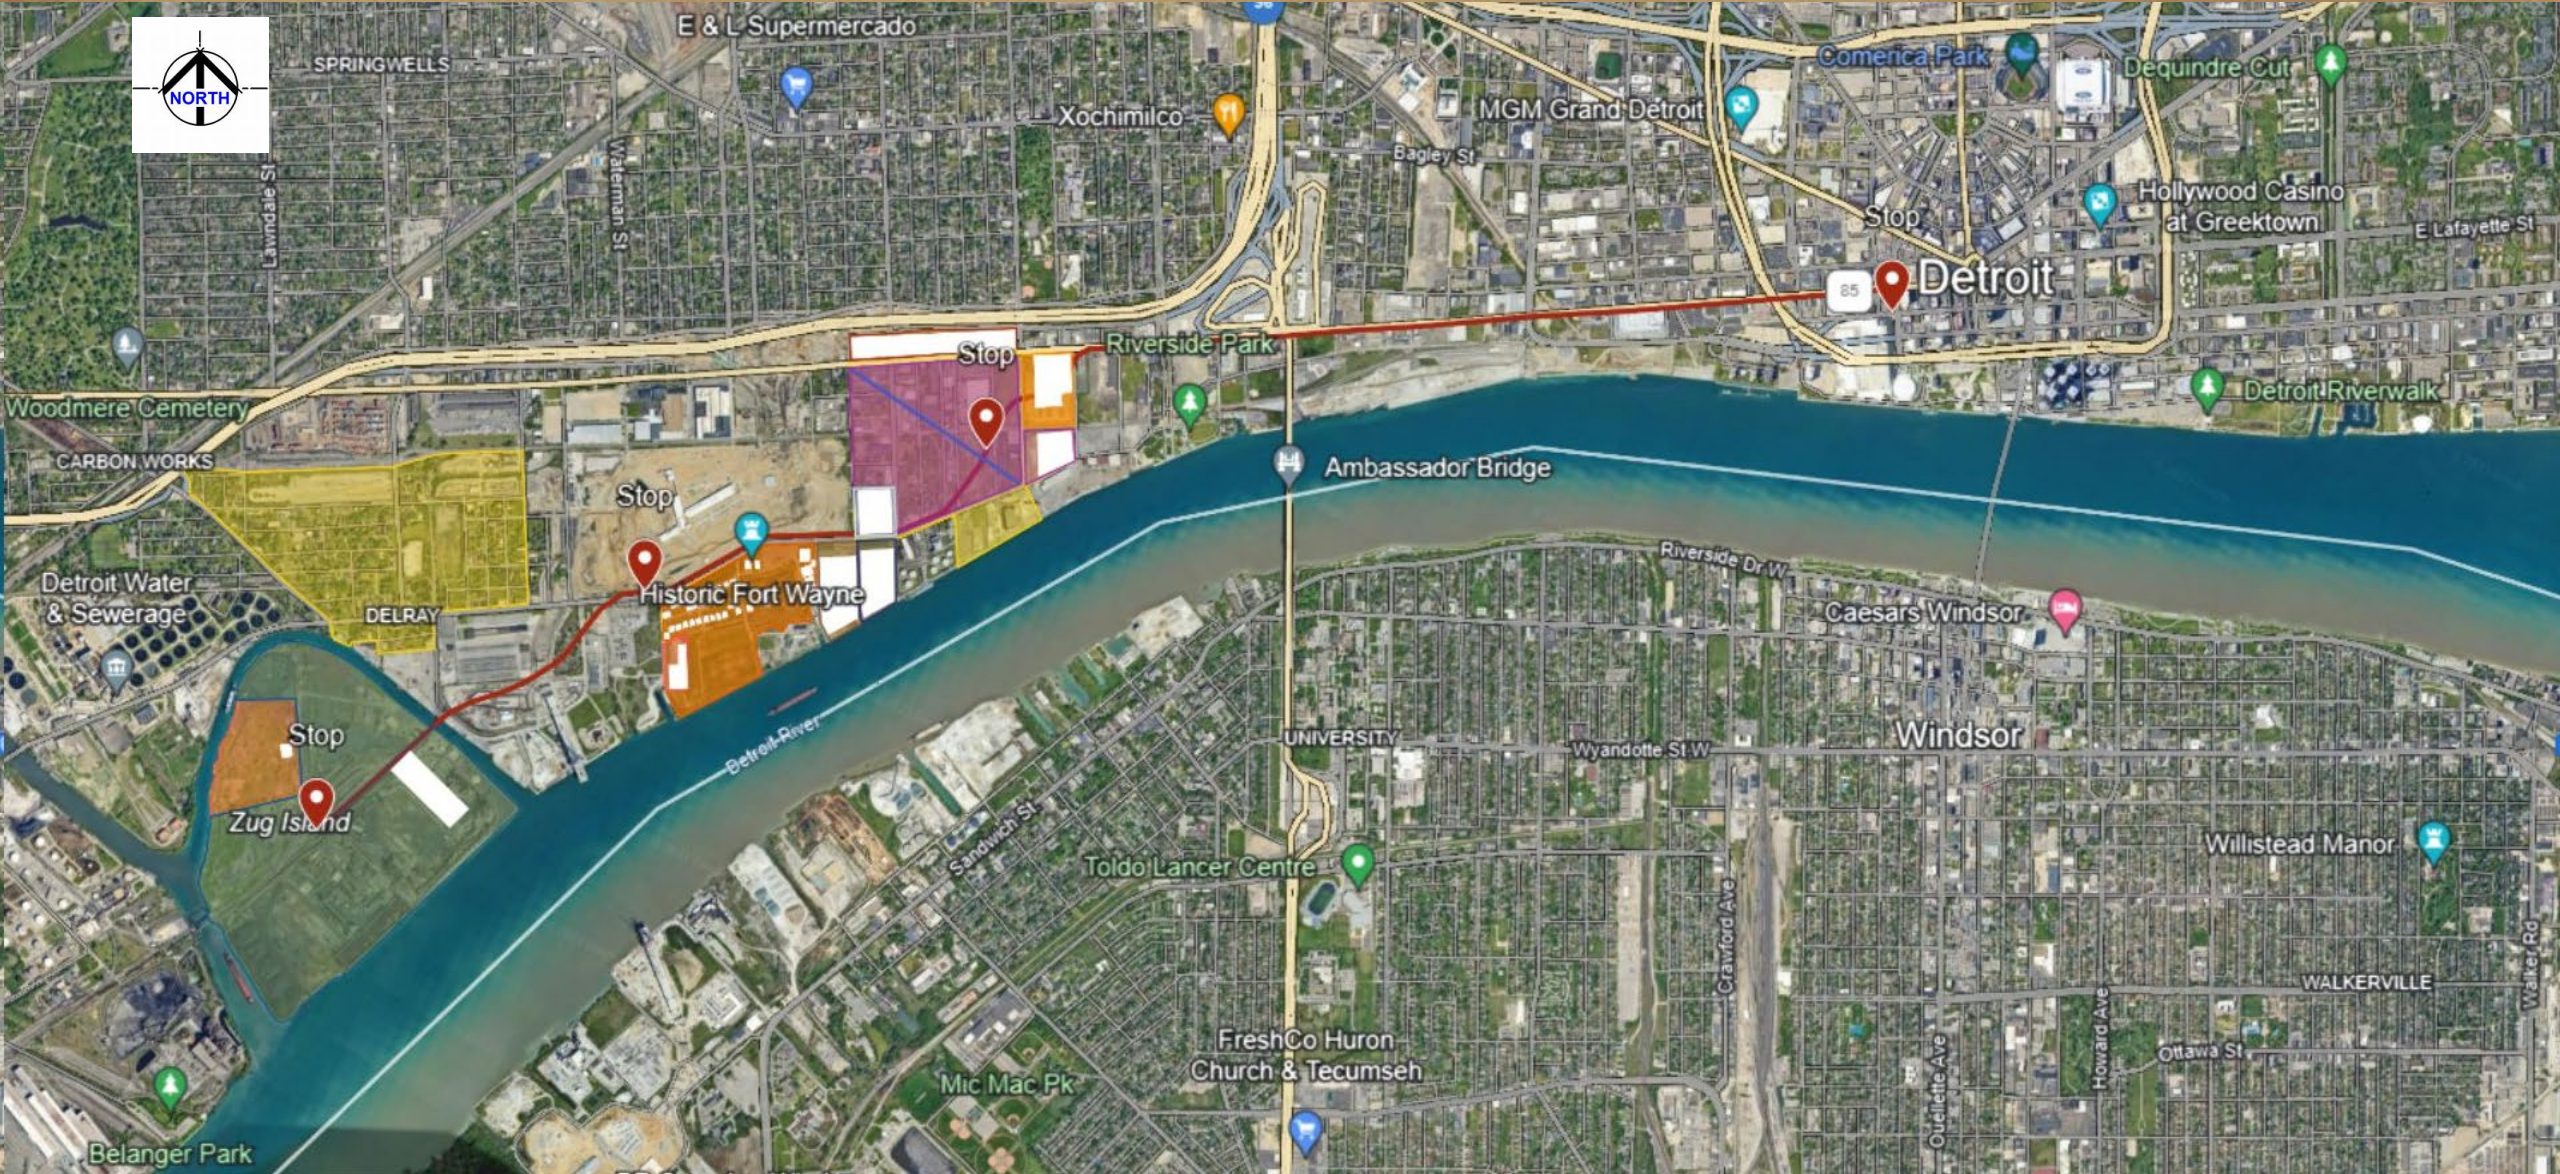

## Blue Oval City

FORD Motor is leading America's shift to electric vehicles with its "Blue Oval" Mega Plant in Tennessee and Twin Battery Plants in Kentucky are a testament of Ford's commitment.

# Area Map

## Imagine 7<sup>th</sup> generation Village”

### Preliminary Land Use Proposal & Estimated Budget

1. Village Promenade – 50 Stores/30 Restaurants (1.25B)
2. Central Monorail Station – 7 Floors Underground Railroad and Stations (450M)
3. Sun Casino - 7 Floors (480M)
4. Multistory Parking - 7 Floors (900M)
5. Professional Soccer Stadium (860M)
6. Marina & Restaurants (125M)
7. Sky Music & Theater Venue – 4 Floors (600M)
8. Earth Hotel – 7 Floors (1.2B)
9. Ocean Water Park & Hotel – 7 Floors (1.2B)
10. Fort Wayne – 30 Buildings: Veterans Resource Group, Historical Trauma and PTSD Treatment, Eco-Green Bank and Carbon Underwriting Lab (375M)  
Fort Wayne – Institute of The Imagine 7<sup>th</sup> generation Initiative (140M)
11. The Imagine Initiative Museum of Historical Trauma, Cure & Healing (140 M)
12. Woodland Burial Mound – 7th Generation Consciensness (5M)
13. The Imagine Initiative Sustainability Energy Lab (350M)
14. 6,000 Residential Homes and Infrastructure – not shown on map (2.4B)
15. New Schools – not shown on map (1.1B)

Total Estimated Cost 11.575 Billion

American Native Burial Mounds and  
Outlining the Woodlands Sacred Grounds

# Artificial Intelligence Use for Historical Trauma Solutions

Shifting the oil economy paradigm will require extraordinary tools of intelligence such as AI to provide good information, at the lowest possible cost, for intelligent people to make good decisions for Historical Trauma preventative education and risk management of natural resources.

## **Carbon Underwriting Lab**

AI will be used as the primary tool for a “Carbon Underwriting Lab” (CUL) to certify potential 7<sup>th</sup> generation outcomes of specific products and services by providing current data of available resources, consumption rates, carbon counts, chemical content, reuse values and disposal content. AI can provide statistical and generational long-term analysis of multiple outcomes. This will be able to predict measurable resource depletions and/or better use of a given resource. AI will be able to weigh in legally, medically, and scientifically for best use of materials pursuant to risk management and future planning. The goal of harnessing advanced AI and human intelligence to align the future road map for measurable sustainability. This will be crucial for survival in an over- crowded world. Carbon Counts to produce and/or service goods will be labeled on all products used for the Imagin7th generation project. Hopefully, CUL will become a standard with the intent to manage future resource consumption and discharge rates throughout the planet. AI can also identify reductions accomplished on an annual basis and assist in mitigating and/or reducing the carbon footprint of a future product or service.

## **Checks & Balances**

AI will identify incidence of false claims and conspiracies, such as when seven top CEOs in the cigarette industry testified under oath to Congress (1994) that nicotine was not addictive and not a major health risk. During 1990, 418,690 U.S. deaths (approximately 20% of all deaths) were attributed to smoking. Two years later, the CEOs were all under federal investigation for lying under oath to Congress.

The Imagine Initiative:  
Kick Starting Detroit's New Green Revolution with Millions of High Paying Jobs for Michigan, Similar Boom to WW2 armament.

## Virtual Eco-Green Bank, Green Digital Currency, and a Free Trade Zone for Carbon Credit (CC) Exchanges

Alongside the Carbon Underwriting Lab (CUL), The Imagine 7<sup>th</sup> Generation Initiative will work with established Non-Profit Eco-Green Banks, to transact Carbon Credits either the United Nations and/or Voluntarily Certified. This part of the project is already established with Sovereign Native Tribes currently trading Carbon Credits in the \$40.00 to \$80.00 range. All CC types: Blue (water), Forest Restoration, Renewables, and Sustainability and Continual Environmental Protection CC's will flourish and become a world leader in a new green revolution and source of high-quality green jobs.

A New Digitized Green Dollar USD backed by US CC's will be able to be leveraged up to 100% financing scenarios on the front end of a deals, instead of a backend tax credit. This is a strategy to trade Carbon Credits in a conversion to Green Dollars for securitizations and/or downpayments on projects.

By Law Carbon Credits can be used only once, however, a generation of new Carbon Credits occurs as the result of the completion of a second- generation project's newly certified CCs. All resulting from a project securitizing leveraged unused Carbon Credits from other completed projects. Several leveraged scenarios will be able to play out with C-PACE Loans, Green Bonds and many other securities. Additionally, Green Dollars can be traded for Carbon Dollars in current markets. In time, the Digital Green Dollar will become more recognized as an everyday currency as we shift the paradigm to a Green Market Economy.

# The Imagine Initiative:

## Moving the Paradigm in Shifting the Current Carbon Dollar to a Green Economy with a Green Dollar

The foundation and real value of a Green Digital Currency is indirectly related to the Carbon Credits being accepted and indirectly backed by the United States Government. A backing based on preserving and/or transforming damaged air, water, and land to a healthy, clean sovereign assets of the United States. The United Nations Carbon Platform (UNFCC) along with a few other third - party accreditations can certify Carbon Credits under strict guidelines and subsequently, the trading of lawful Carbon Credits for Digital Green Currency is recognized by the United States.

The electronic recording of data from a transaction on a Digital Green Dollar can serve many extraordinary values in recording the transactional details of the certified CC, plus other block chain information.

The Green Dollar can also serve in a highly-valued purposes in functioning as “Green Paper Equity” and a green source of liquidity and profits. The Seventh Generation Consciousness in its beautiful, poetic, and eloquent vision of a new way of advanced critical thinking to the 7<sup>th</sup> generation decision-making can philosophically shape our new paradigm of a desperately needed robust Green Economy within the United States and other Nations around the World. A vision backed by Green Dollar Carbon Credits leveraged like Black Carbon Dollar is critical in advancing the new Green Economy. A vision is to have financial markets recognizes the Green Dollar as a pegged currency based on the growth of green energy and carbon reduction conversions.

In 1971, President Richard Nixon decided to suspend the US dollar’s convertibility to gold and silver, resulting in the creation of a national fiat currencies which was quickly pegged as a carbon dollar globally for exchange oil commodities. The current US Dollar is a carbon USD pegged on the values of carbon energy required to produce goods and services of all nations.

Perpetuating a dynamic Green Dollar Economy (backed by United States Carbon Credits) will require buying behaviors to be influenced with the knowledge of the carbon footprints of products and services to make smart environmental choices in purchasing products and services. Thus, educating the values of a products and/or services improvements in carbon reductions will result in substantial improved and sustainable economy.

# The Imagine Initiative: Promoting Intelligent Long-Term Critical Thinking

Initiating the new Green Dollar Economy with require a Green Digitized Currency for data creation of CCs backed by United States Carbon Credits from significant assets. A green currency will incentivize the monetization of carbon credits on wholesale trading platforms and creation of millions of jobs in every related industry.

Basically, the retooling of America and the rest of the world to sustainability and beyond.

Rolling back carbon-based products such as plastics, chemicals, steel, and fossil fuels creates a new economy developed solely with green sustainable technology such as extensive urban farming, green built structures, Electric Vehicles and 3D green printed products. Imagine a community were everything is made of organic materials and through new organic technology such as a hemp car (already done), printed hemp concrete houses (done ), organic developed furniture (done) and practices of living in zero-sum carbon footprint (done). This is attainable with our current technologies.

Just Imagine the future capabilities of 7<sup>th</sup> generation philosophy going forward and advancing critical thinking to the next 7 generations, pushing mankind to the 14<sup>th</sup> generation and beyond.

Now that would be a legacy!!!

THE IMAGINE  
7<sup>th</sup> generation Initiative

The Imagine Initiative lies at our feet.

Nasdaq Launches New Technology for Carbon Credit Block Chain Technology Expected to Be a Three Trillion Market in 10 yrs.

THE IMAGINE  
7<sup>th</sup> generation Initiative

- Nasdaq Launches New Technology to Scale Global Carbon Markets
- PUBLISHED
- NOV 29, 2023, 1:00AM EST
  - *Technology Securely Digitizes the Issuance, Settlement, and Custody of Carbon Credits*
  - *Service Uses Smart Contract Language, Deployed via Private Centralized Database or Private, Blockchain Technology for Enterprises*
    - *Puro.earth to Register Carbon Removal Credits Using the Technology*
- NEW YORK, Nov. 29, 2023 (GLOBE NEWSWIRE) -- Nasdaq (Nasdaq: NDAQ) today announced the launch of a pioneering new technology that securely digitizes the issuance, settlement, and custody of carbon credits. It will be provided to market infrastructures, registry platforms, and other service providers globally.
- The service will ultimately support the development and institutionalization of global carbon markets. Despite being a relatively young market, the carbon credit operating model is characterized by bilateral trading and a heavy reliance on manual interaction, providing limited ability to scale as the market develops. This inflexibility has also led to an absence of standardization – where credit data can be categorized and integrated into existing systems – which is a major barrier to attracting significant capital flows.

# Deal Structure and Monetization Milestones

1. City of Detroit Emanate Domains the Delray Properties as illustrated in the proposed use plan for the development of the Imagine Village Initiative

2, Carbon Tax Credits will be monetized and leveraged by an Eco-Green Bank to fund the Eminent Domain transactions.

3. Current landowners will have first right to lease back the property that has been Emanate Domained, after the proposed development plan has been legally finalized, and providing the property is free from infrastructure boundary changes, roads, utilities and newly intended special uses.

4. The City of Detroit will return the lands in their current damaged state to the Potawatomi, Delaware, Miami, Eel River and Tenskwatawa, the predecessors, and all other Tribal Nations who wish to participate in ownership. Previous landowners will be responsible for land remediation.

5. The proposed agreement is conditional upon the land being leased back with a 99- year term at market rates for the intended purpose of developing the proposed Imagine 7<sup>th</sup> generation Village.

# A message from the founders

The underlying basis of our proposed project stems from a need for a place to educate and heal from Historical Trauma. We would like to educate on the causes of abuse as generated from genetic struggles of competition. The understanding that all living life on earth, lives in a genetic pool of many, with chromosomal traits of competition, gene expansion, abuse, domination, genocide and even more damaging ecocide – as the root of Historical Trauma. As raw as this may sound, human-kind seems to be holding a feeding spoon which is continually consuming and draining the environmental soup bowl of life, resources, people, and all living things.

Hopefully, this will help clear your perspective going forward to be a critical observer of information and data, not a rationalizer of profit and greed. We need many intelligent minds and good decisions to plan and execute this project. We hope you have the fortitude to understand the past, current and imagine the future.

We think you will see there is an undeniable common thread among all of us – the agreement and desire for a healthy planet for our children to survive and thrive for future generations to come.

We look forward to hearing your thoughts of this proposal. Thank you.
