

TRUE PASSWORDLESS™ WORKFORCE AUTHENTICATION

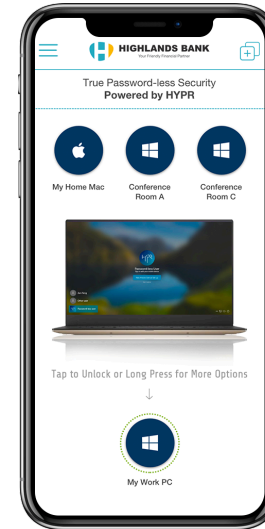

As enterprises move more applications to the cloud, the attack surface gets larger while phishing attacks, credential reuse, and password reset costs get higher. Passwords, shared secrets, and legacy 2FA are no longer enough to secure the connected enterprise.

That's why industry leaders deploy HYPR - the first Authentication Platform designed to eliminate passwords and shared secrets for employees, contractors and partners across the enterprise.

DEPLOY TRUE PASSWORDLESS SECURITY

CROSS-CLOUD, CROSS PLATFORM IN YOUR OWN APP

Accelerate Your Cloud Journey

Remove Shared Secrets from the Enterprise and Accelerate Your Journey to the Cloud

Empower a Passwordless Workforce

- Significantly Reduce Phishing Attacks and Credential Reuse
- Save Thousands Of Hours In Workforce Productivity
- Save Millions Of Dollars In Password Reset Costs

True Password-less Workstation Login and Single Sign-On

- Eliminate Shared Secrets Across Windows 7, 8, 10 and MacOS
- Secure Advanced Multi-Profiles & Passwordless Offline Access
- Deploy Enterprise-Wide with Your Existing Identity Providers
- Enable Geo-location & Policy Management

"HYPR's ability to stop credential reuse can significantly reduce the collateral damage from breaches that happen outside of your control."

BILL CARDWERLL

FMR, VP INFORMATION SECURITY,
PRUDENTIAL

HYPR AUTHENTICATION PLATFORM

More than 80% of breaches have one thing in common – they're caused by stolen passwords and shared secrets. Shared secrets are the primary target for hackers and have remained the #1 cause of credential stuffing, fraud, phishing and large scale breaches.

HYPR is the first Authentication Platform designed to eliminate passwords and shared secrets. By moving authentication keys to the device, HYPR forces hackers to have to attack each user one at a time – drastically increasing security and shifting the economics in the enterprise's favor.

HYPR Mobile Client

- True Passwordless™ Mobile-to-Web Login
- Offline Mode & Advanced Multi-Profiles
- The Only Mobile-Initiated Authentication
- White-Labeled with Your Own Branding
- Fully Pre-Integrated With Your IdP

HYPR Desktop Client

- Secure Credential Provider
- Enroll Multiple iOS and Android Devices
- The Only True Password-less VDI Solution
- Supports Yubikey & Platform Authenticators
- Cross-Platform Windows 7, 8, 10 and MacOS

True Passwordless Server

- High Throughput & Scalability
- CentOS, Red Hat
- MySQL, Postgres, Oracle DB
- Zero PII and Shared Secrets Stored
- Deploy Cross-Cloud, On-Prem or Hybrid

FIDO Control Center

- Fully API-Driven Intuitive User Interface
- Geo-Location and Policy Management
- Customizable Enrollment Experiences
- Get Real-Time User Analytics
- Manage, Provision & Deploy FIDO
