Help keeping up with the latest opioid findings

Modules offered

Treating acute pain without overusing opioids

The primary goal of this educational program is to address the need for safe, effective pain relief among older adults across a range of settings. Achieving functional goals while avoiding harm from side effects, addiction, or potential overdose is challenging in this patient population due to such issues as altered pharmacodynamics/pharmacokinetics with age; polypharmacy; potential cognitive deficits; and heightened risk of falls and organ-specific vulnerabilities.

CME credits: 1.25 AMA PRA Category 1 Credits™

Managing chronic non-cancer pain

The primary goal of this educational program is to address the challenge of effectively managing patients with chronic non-cancer pain. This activity is designed to primary care providers to utilize evidence-based treatments for common chronic pain conditions (e.g., osteoarthritis, low back pain, diabetic neuropathy and fibromyalgia) and understand best-practice recommendations regarding opioid prescribing, including pain management plans and recommending naloxone.

CME credits: 1.75 AMA PRA Category 1 Credits™

Helping patients manage opioid use disorder

The primary goals of this educational program are to address the needs for effective treatment and support of patients with Opioid Use Disorder (OUD) in the primary care setting, to educate clinicians about the evidence supporting the use of medications for the treatment of OUD, and to encourage clinicians to obtain the waivers necessary to prescribe buprenorphine for patients with OUD.

CME credits: 1.0 AMA PRA Category 1 Credits™
