

OCEAN AID

Ocean AID is a marine technology company based in Victoria, Canada, specializing in **AI vision** and **edge computing** to deliver real-time AI-powered intelligence for fisheries, vessel safety, and ocean operations.

AI VISION

We have detected hundreds of thousands of underwater targets from sonar and marine imaging data, powering fish enumeration, catch monitoring, and efficient search and retrieval.

EDGE AI COMPUTING

We build marine-grade edge computer boxes with powerful NVIDIA AI chips to power the next generation of marine applications. No internet required.

IMPACT

With each purchase you are supporting the retrieval of 4.5 kg of plastic from the ocean. Our technology and projects have supported the retrieval of over 3 tonnes of plastic from the ocean.

Join our vision of becoming a global leader in marine monitoring technology to support cleaner, safer, and more sustainable oceans.

ATR APPLICATIONS

- Fisheries
- Ghost gear
- Wrecks detection

Current applications

- Collision alerting
- Search and rescue
- Whale monitoring

In development

- Infrastructure inspection
- Aquaculture
- Mine detection (UXO)
- Defence
- Resource detection

Future applications

OUR EXPERIENCE AND IMPACT

Shoreline plastics

Pairs with aerial video and IR to detect surface objects. Proven to detect 10 types of shoreline debris and plastic for efficient cleanups.

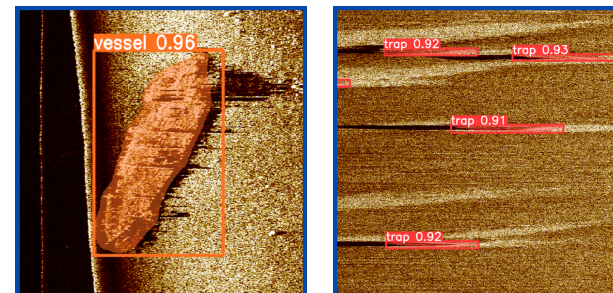

No internet required.

Each detection is stored on Marlin's internal storage, and can be synced to your cloud account on *Ocean Hub* for post-mission review

Ghost gear

ATR for side scan and multibeam sonars to detect underwater objects. Proven to detect ghost fishing gear, derelict vessels, and planes.

Marlin Boxes

Marine-grade boxes with powerful Nvidia AI chips for the next generation of marine applications

Three system tier options:

Marlin T40

- 60+ AI TOPS of processing

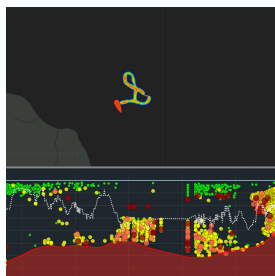

Marlin T120

- 150+ AI TOPS of processing

Marlin T5000 Commercial

- 1000+ AI TOPS

PRODUCT SPOTLIGHT

Marlin Fishing: Real-time fish detection, sizing, and mapping

- ATR with downscan CHIRP sonar to detect, count, and map fish while fishing in the ocean.
- Reducing bycatch by targeting fish, while saving time and fuel.
- Collect comprehensive data for fisheries management.

Marlin Lookout: Marine sensor fusion awareness and alerting system

- Sensor fusion with video, IR, radar, sonar to detect whales, logs, buoys, persons in water, vessels and more surface objects.
- Detect, track, and map objects in real-time to support captains' decision-making and warn of potential collision courses.
