Researcher: Iman Navab

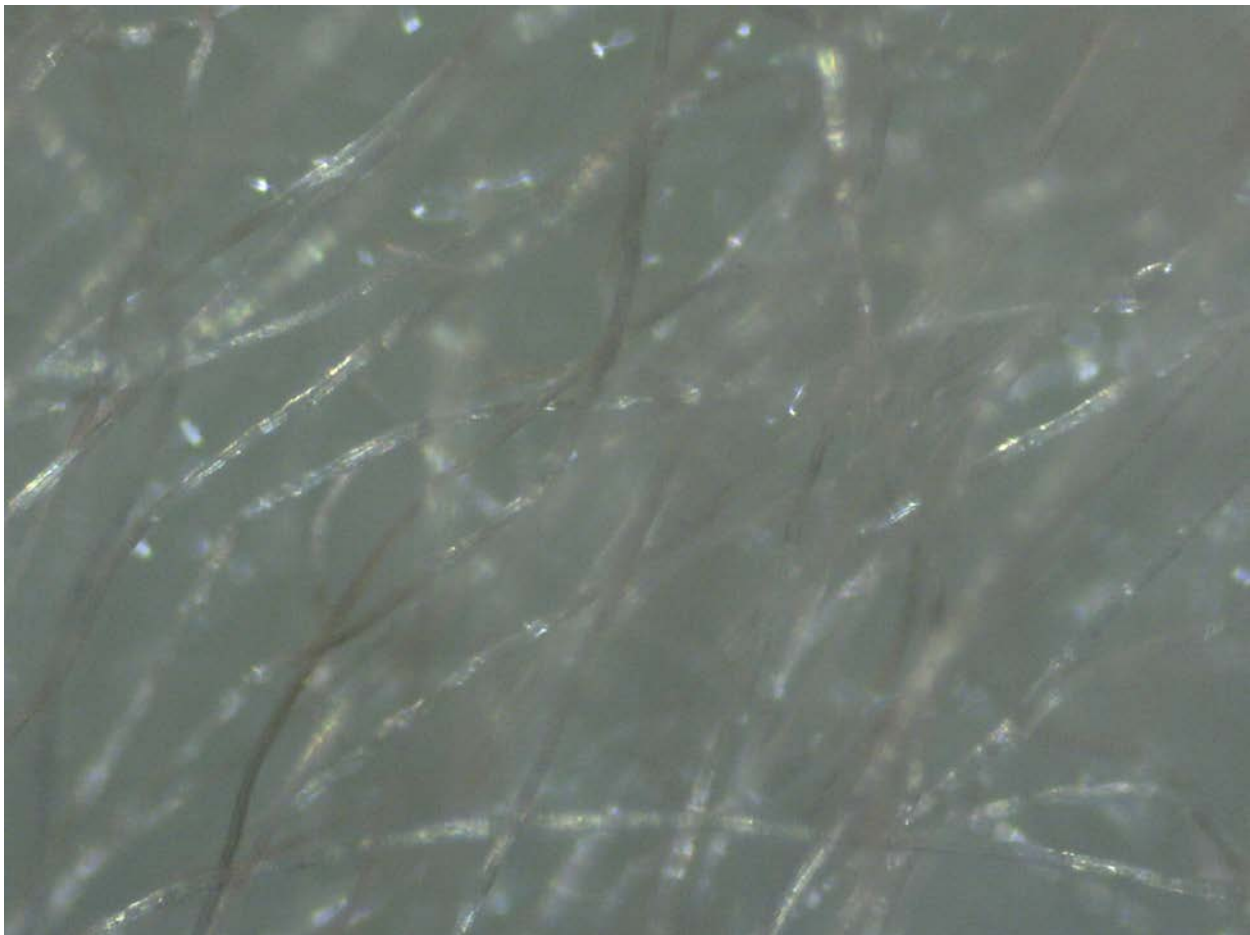

Introduction: The purpose of this simple experiment is to show what microscope reveals for some metals that are potentized.

Result: The following images are captured by the ARHFC.

Equipment/tools used: Laminar, Microscope 4X magnification, Cotton balls.

Liquid remedies and potency: Mercurius 6X, Argentum Nitr 6X, Aurum metal 30X, Cuprum metal 4Ch.

Image one: **Mixture of purified water and alcohol** on a cotton ball.

Note:

For this experimentation the following items were used,

- The homeopathic Mercurius corrosives (Mercury) in liquid format in 6X potency.
- The homeopathic Argentum nitricum (Silver nitrate) in liquid format in 6X potency.
- The homeopathic Aurum metallicum (Gold) in liquid format in 30X potency.
- The homeopathic Cuprum metallicum (Copper) in liquid format in 4Ch potency.
- The mixture of Purified Water and Ethanol (Alcohol) as the solvent.
- The Cotton balls as the base vehicle.

Please share these findings for further research and educational purposes!
