

Tips for Safety

- Internet is available through WIRED connections.
- WIRED CONNECTIONS are faster, safer and more secure.
- WIRED CONNECTIONS can be used for phones, computers and many other devices.
- Keep distance between your body and a wireless device, (read the "FINE PRINT"). Visit www.showthefineprint.org.
- Laptops and tablets should be used on a table, never your lap.

Symptoms of Wireless (Microwave Radiation) Exposure

- Insomnia
- Fatigue
- Headaches, Dizziness, Neurological
- Eye Problems
- Heart Problems
- Fertility Problems
- Blood Pressure
- Endocrine - Diabetes

Those injured into chronic illness may have Electromagnetic Sensitivity (EMS)

Let's work together to protect our communities

Most Telecoms want 5G Networks. Each network needs its own set of antennas. Antennas in each set are intended to be placed about every several hundred feet.

DISTANCE IS YOUR FRIEND

The farther from the source, the less intense the radiation.

Fiber Optic To The Premises (FTTP) is safer, faster, more secure. You have already paid for it in your phone bills since the early 1990's. Fastest of All at the Speed of Light!

The Problem

Industry-friendly FCC Rulings allow, and proposed PA State legislation (HB 1400, HB 305, and related bills) further encourage the use of close-proximity microwave radiation antennas. These are intended to operate 4G and 5G telecommunications right next to homes, 24/7.

Opposition to 5G is based on:

- Multiple companies want redundant networks which will lead to a high-density, ground network of many antennas, very close to homes and each other.
- Up to 60,000 satellites with additional antennas will add to the mandatory 24/7 irradiation.
- This is harmful to children, adults, and pets. It is worse for people with illnesses and impairments, and there are no medical exemptions for the vulnerable.
- Insurance carriers do not cover illnesses that result.
- Decimation of wildlife, bees, birds, butterflies will be among the most affected.
- Decreased property values.
- US exposure guidelines are already among the highest in the world. See graph below.

What do doctors and experts say?

- 252 experts from 43 countries have asked the UN to protect the health of humans and the environment from EMR. (www.EMFScientist.org)
- 125 public health scientists from Harvard and Boston Universities signed a petition in 1997 to stop microwave radiation infrastructures.
- 258 physicians, scientists, and educators have signed the Joint Statement on Pregnancy and Wireless Radiation urging the protection of pregnant women and their unborn babies from harm. The Baby Safe Project: (www.babysafeproject.org).
- The International Appeal to Stop 5G on Earth and in Space (<https://www.5gspaceappeal.org>) has now been translated into 30 languages and has been signed by more than 172,000 individuals and more than 1,800 organizations from 207 countries and territories. Signers include over:
 - 4,500 scientists
 - 2,500 medical doctors
 - 8,000 engineers
 - 9,600 psychologists, psychotherapists, and social workers
 - 4,000 nurses

Take Action!

Home:

Reduce your wireless exposures by hardwiring your devices. Learn about other ways to reduce exposure. Please see our website section: Get Wired! (www.https://pasafetech.org/get-wired)

Municipal:

Attend your local municipal meetings. Tell your local leaders to protect your community by updating your local ordinances. Antennas should not be operated where people live, work or play.

State:

Call your State Legislators today and tell them to vote "NO" on PA HB 1400 and HB 305. These bills will ease the installation of antennas and remove the right of municipalities to control the installation, and placement of these antennas. HB 1400 will incentivize the use of small cells at only \$100 for an installation instead of the high fees for installing them on macro-towers.

Federal:

Call your Senator and Congressperson and tell them to work to protect you and your community by demanding revision of the FCC Guidelines and legislation to protect health and the environment from electromagnetic radiation, and especially small cell antennas. The current US FCC Guidelines are the highest in the world.
