Crown Bevcan EMEA PPWR Heavy Metals Compliance Statement

Aluminium beverage cans and ends supplied by Crown Bevcan EMEA are manufactured using materials and processes designed to support compliance with the heavy metals requirements of the EU Packaging and Packaging Waste Regulation (PPWR), including the limit of 100 ppm (sum of lead, cadmium, mercury and hexavalent chromium).

Compliance can be demonstrated through appropriate supply chain documentation upon request.

Under the PPWR, the point of compliance is the finished packaging placed on the market. Accordingly, responsibility for demonstrating compliance rests with the manufacturer of the finished packaging, as defined in the Regulation, which is typically the filler and/or brand owner.

As we supply cans and ends as separate components, our documentation is intended to support our customers in their own compliance assessment. Customers may, at their discretion, undertake analytical testing of finished articles as part of their own compliance verification procedures.

A handwritten signature in blue ink, appearing to read "C. Bedford".
