INTRODUCTION

MSD.POS uses SQL Lite databases to provide an easy, lightweight installation on Windows 7, Windows 8 or Windows 10 based systems.

MSD.POS is based on a minimum screen resolution of 1024 x 768 although will adapt to most screen sizes automatically.

MSD.POS uses an online licence system so that the licence is refreshed every day for 30 days, providing the options for sale and rental models and also the ability to disable licences for credit control.

MSD.POS can be deployed on any **Windows tablet**.

A Brief Overview of MSD.POS

External Interfaces

Serial and IP Printers

MSR and ibutton

Bar-code Scanning

2 Line rear display or Panel Display

Cash Drawer via serial or via Printer

Integrated EFT

On-Line Ordering Via Mobo2Go

BOS Integration

MSD Cloud for Reporting & Stock

MSD Order Board

Delivery & Takeaway

Counter Orders

Collection Orders

Delivery Orders with Driver Tracking

Postcode Integration

MSD.POS Screen Editor

Buttons can be dragged from a list on the left into the required position. Buttons can be sized as large as required by dragging. Buttons can have the foreground and background colours set as well as the font size. Buttons can be copied and pasted on the same screen or onto different screens.

This is ideal for common blocks of buttons, for example you can create the function buttons on one page and copy them to another page easily.

A range of buttons can be selected and then have the colours and font size changed. The button size, colours and font sizes can be set for new buttons being added to facilitate quick screen setup.
