

Donna Shotwell

A 30 year background in chemical innovation and product development.

Donna has discovered and developed a new branch of chemistry and physics, manipulating matter at the magnetic, electrical and quantum level.

With an extensive background in water structure, purification and chemical bonds used in municipal, oilfield, and agricultural applications. Donna's work has been studied and validated by 14 universities.

Technology capabilities:

1. Wastewater purification.
2. Biofilm reducer
3. Significant reduction in chlorine required for water treatment
4. Replaces zinc orthophosphate which is commonly used and very hazardous
5. Reduces Blue Green Algae and red tide.
6. Requires far less filter backwashing due to the extreme ability to clean filters, saving enormous volumes of fresh water.
7. Biofriendly scale remover for pipes and cooling towers vs highly toxic acid currently used.
8. Increases capillary pressure, increasing productivity of oil wells.
9. Provides off the chart zeta potential with even the cheapest surfactant product.
10. Patents in process for several different oilfield combinations due to increased abilities to enhance existing products such as biocides, stimulants, gels, friction reducers and wetting agents.
11. Actually enhanced by salt water applications. All other technologies are weakened in the presence of saltwater. Oil wells often have high levels of brine to deal with.
12. Significantly enhances performance of all existing agriculture products including fertilization, nutrient uptake, growth rate, growing season expansion, increased fruit production and quality. Reduces need for fertilizers and pesticides by 10 times. Far less fertilizer runoff in lakes, rivers and streams.
13. 10X reduction in chemicals, pesticides, fertilizers and nutrients needed in agriculture, protecting both the environment and human population.
15. 14. Successful anti gravity field effect test performed)
16. Several ground breaking technologies are being patented right based on this technology.
17. Significantly increases blood oxygen level for medical applications especially in the fields of lung related illnesses and burn healing. Higher bio-absorption of water molecules. Efficient breakdown of medicine significantly increases drug and nutrient effectiveness.
18. Skin rejuvenation lotion, eczema, pain and inflammation reduction.
19. Removes radiation from radioactive materials.
20. Creates piezoelectric properties in minerals that are not considered piezo reactive in conventional science.
21. Room temperature superconducting copper wire showing increased melting heat potential (7500 degrees) and 0 resistance properties (room temperature super conductive).
22. Elemental conversions and changes (alchemy).
23. Subatomic particle separation by molecular weight and conversion to magnetic state, magnetising non-magnetic material.

24. Oil well water purification.
25. Electric Power through electron transfer.
26. Quantum energy - test demonstrated over 400mw.
