

Cancer Guardian solves the problem of awareness, access and affordability to services that can help improve prevention and survival.

Cancer Guardian Structure and Features

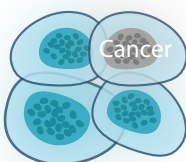

Advanced DNA Testing

color

Cancer Guardian participants receive immediate access to hereditary genetic screening upon enrollment in the program.

This genetic screening provides participants with insights into their risk for cancer, heart disease, and how their body processes certain commonly-prescribed medications.

Additionally, participants who are diagnosed with cancer, after enrolling in the program, **receive access to Advanced DNA Testing of their cancer to help identify the best course of treatment.**

Cancer Support Specialists

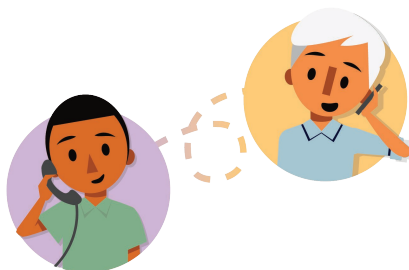

1

Our Cancer Information Line is a resource for all Cancer Guardian participants and their immediate family members (including parents and parents-in-law).

2

When an enrolled participant reports their cancer diagnosis, we immediately assign them a dedicated Cancer Support Specialist (CSS). Their dedicated CSS is there to support them through their cancer journey.

- Personal Support Review
- Customized Information & Resources
- Second Opinion Pathology Review
- On-Site Nurse Navigator

Medical Records Platform

Cancer Guardian includes a Medical Records Storage Platform to help you create a secure profile of your medical history or health condition. Simply upload your medical data and securely connect with your Cancer Support Specialist and medical team.

- Easy Upload of Medical Data
- Video Consultations
- User-friendly Navigation Interface

Easy to create, secure to share.
Simple to use for you and your doctors
