International Carrot Day

Today we celebrate the carrot a simple vegetable we eat almost every day.

Carrots contain **beta-carotene** — a natural pigment our body turns into **vitamin A**, which **supports healthy vision**.

Carrots were once purple, white, and yellow. Carrots also don't always grow straight. Sometimes they twist, split, and form funny shapes!

What would the world be like if everything grew the same shape and color?

QUESTION

Read a Road Map

The word map comes from the Latin **mappa**, meaning “cloth” or “sheet.”

Before GPS, a trip didn't start with “Hey Google.” It started with a paper map and asking for directions when you got lost.

Have you ever held a map? Do you know how to read it? Well, it's never too late to start! In case of a zombie apocalypse or if robots take over the Earth and Google stops following human's orders - or just for fun - let's read a map today!

Draw a map to a treasure you hide
can someone follow it and
find what's inside?

This ancient map is from the 6th century. Can you guess which city is in the center?

QUESTION

GROWTH

World Art Day

The word art comes from the Latin word **ars**, meaning “skill” or “craft.”

Art has existed for thousands of years and there are hundreds of styles and forms around the world. Each style shows the world in a different way.

Some of them are:

Cave art (some of the oldest drawings on Earth)

Optical illusions (images that trick your eyes)

Abstract art (shapes and colors instead of objects)

Street art (art in public spaces)

Sculpture (art you can walk around)

Create art in a way no one expects or mix two styles together (like cave art + optical illusion).

Why would teenagers long ago leave their handprints on cave walls?

QUESTION

GROWTH

Earth Day

Ecology comes from the Greek word **oikos**, meaning “home.”

Earth is our only home.

How do we care for it?

Earth Day began in 1970, when people started to notice how everyday actions connect to the air, water, and land around them. Since then, it has become a day to pay attention to those connections.

A simple ice cream connects to more than it seems.

Ice cream → land → water → plants → animals → methane → factories → energy → fuel → smoke → packaging → waste → climate.

Can you follow the connections between the steps?

Pick something you do today. Draw the chain before and after.

How many steps can you trace?
