

Yo-Yo Day

Today we celebrate the yo-yo a simple toy that goes down... and comes back up.

But why doesn't it just fall and stay there?

A yo-yo works because of **gravity, tension, and spin**. When you throw it down, the string unwinds and the yo-yo spins at the bottom.

The **spinning motion stores energy**, allowing it to climb back up the string.

Draw a yo-yo
on a string
Any color
you can pick!
It can spin and
roll and spring
Can you do a
fancy trick?

SHARE YOUR ART
WORLDWIDE

WILL IT WORK?
Underwater,
On a moving train,
On the Moon?
Why or why not?

QUESTION

Environment Day

Have ever wondered when is Earth's birthday? Today!

It is celebrated in more than 150 countries, and it was started by the United Nations.

Oceans produce **50 % of the oxygen** we breathe but they are harmed by the amounts of plastic we use. **Even small efforts matter - think of a cute reusable water bottle.**

How will it help the ocean and its inhabitants?

LET'S PLAY!

Set up 4 bins in your room:
Paper, Plastic, Glass and Compost.

How many things can you sort in 5 minutes?
