

Emily Vandalovsky

Group Log – Assignment 2

Group Members	Project Contributions
Dan Ward	Created the website and laid out its structure. Created the main page and the central tendency page. Was the first one to complete his part well ahead of due date.
Susan Van Alstyne	Created pages for t-test and z-test. Was in communication regarding the status and did a very thorough job on the presentations.
Emily Vandalovsky	Created pages for p-Value and ANOVA. Procrastinated until the last minute. Was not able to receive fellow members response due to the lack of time.
All	Discussed the scope of work, communicated on the details, Picked out the topics to submit. Did our respective parts.

Scores:

Required Elements of the website: 10

The website contains at least 5 pages with statistical data, including the individual pages on t-test, z-test, p-Value and ANOVA, all of which are inferential statistical concepts. Videos and materials are cohesive and appealing.

Content: 15

All written content is of high-level quality and clearly presented. The information is presented in affordable format for the learner to grasp the material.

Additional comment: my page on ANOVA contains very generic example of data. Since we have not covered it in detail in class, I could not figure out how to create a meaningful data set in SPSS. My few attempts resulted in failing to reject the null hypothesis and inability to test the individual hypotheses. I hope to be able to figure it out in the following weeks. Since ANOVA was our 4th page on inferential statistics, I decided to leave it with a generic example.
